

Update no 48 of the Collection Normes – Ouvrages routiers

**July 2006**

**10<sup>th</sup> Update of Volume V – Traffic Control Devices**

**Important notice concerning this update**

Like the content of *Volume V – Traffic Control Devices*, the deadlines for replacing certain traffic control devices that were modified in the context of the updates to *Volume V – Traffic Control Devices* have legal effect.

These deadlines are set out in a separate schedule that accompanies the Foreword, which is signed by the Minister of Transport, and that indicates each of the devices that have been modified (name, former number, new number), the date when each was modified, the purpose of the modification, and the date of the deadline for replacement with new equipment that complies with the standards set out in the new version of *Volume V – Traffic Control Devices*.

However, a number of road network managers will be unable to meet the June 30, 2006 deadline, and have requested an extension. This request applies to the upgrading of All Directions tab signs and Lane Direction Control signs to the new standards, as well as the increase in the minimum installation height for signage.

In order to accommodate these managers, the Minister of Transport has decided to extend the deadline for upgrading these traffic control devices to the standards by a year and a half.

Therefore, you will find enclosed the new Foreword and the new schedule of deadlines, which comes into effect in July 2006. This update will give road network managers greater flexibility in upgrading traffic control devices to the standards.
