PROVINCE OF QUÉBEC

2nd SESSION

37th LEGISLATURE

QUÉBEC, 29 NOVEMBER 2006

OFFICE OF THE LIEUTENANT-GOVERNOR

Québec, 29 November 2006

This day, at two minutes past three o'clock in the afternoon, Her Excellency the Lieutenant-Governor was pleased to sanction the following bill:

39 An Act to proclaim Black History Month

To this bill the Royal assent was affixed by Her Excellency the Lieutenant-Governor.

NATIONAL ASSEMBLY

SECOND SESSION

THIRTY-SEVENTH LEGISLATURE

Bill 39

(2006, chapter 35)

An Act to proclaim Black History Month

Introduced 18 October 2006

Passage in principle 8 November 2006

Passage 23 November 2006

Assented to 29 November 2006

**Québec Official Publisher
2006**

EXPLANATORY NOTES

*The purpose of this bill is to proclaim the month of February
Black History Month.*

Bill 39

AN ACT TO PROCLAIM BLACK HISTORY MONTH

AS the Black presence in Québec dates back over 300 years;

AS the contribution of Black people to the history of Québec is little known among Quebecers;

AS recognition of that contribution will prove to be a source of empowerment and pride for members of the Black communities;

AS proclaiming a Black history month will heighten public awareness of the contribution of Black communities to the history of Québec;

AS heightened public awareness of that contribution will encourage the full participation of all in Québec society, promote inclusiveness and openness to pluralism, and foster closer intercultural relations among all Quebecers;

THE PARLIAMENT OF QUÉBEC ENACTS AS FOLLOWS:

- 1.** The month of February is hereby proclaimed Black History Month.
- 2.** This Act comes into force on 1 February 2007.

Regulations and other acts

Gouvernement du Québec

O.C. 1080-2006, 29 November 2006

An Act respecting the Agence nationale d'encadrement du secteur financier
(R.S.Q., c. A-7.03)

Amendment to Order in Council 45-2004 dated 21 January 2004, amended by Orders in Council 1169-2004 dated 15 December 2004 and 1182-2005 dated 7 December 2005

WHEREAS Order in Council 45-2004 dated 21 January 2004 fixed 1 January 2005 as the date of coming into force of sections 342, 343, 361, 378, 384, 390, 400, 403, 416, 418, 483, 484, 491, 727, 728 and 729 of the Act respecting the Agence nationale d'encadrement du secteur financier (R.S.Q., c. A-7.03), which became the Act respecting the Autorité des marchés financiers (R.S.Q., c. A-33.2) following the amendment made by paragraph 2 of section 90 of the Act to amend the Securities Act and other legislative provisions (2004, c. 37);

WHEREAS Order in Council 45-2004 dated 21 January 2004 was amended by Orders in Council 1169-2004 dated 15 December 2004 and 1182-2005 dated 7 December 2005 to postpone the coming into force of those sections to 1 January 2007;

WHEREAS it is expedient to further postpone the date of coming into force of those sections to 1 January 2008;

IT IS ORDERED, therefore, on the recommendation of the Minister of Finance:

THAT "1 January 2007" in the last paragraph of the operative part of Order in Council 45-2004 dated 21 January 2004, amended by Orders in Council 1169-2004 dated 15 December 2004 and 1182-2005 dated 7 December 2005, be replaced by "1 January 2008".

GÉRARD BIBEAU,
Clerk of the Conseil exécutif

7882

Gouvernement du Québec

O.C. 1084-2006, 29 November 2006

An Act respecting the Ministère de la Santé et des Services sociaux
(R.S.Q., c. M-19.2)

Signing of certain deeds, documents or writings
— **Regulation 1**
— **Amendments**

Regulation to amend Regulation 1 respecting the signing of certain deeds, documents or writings of the Ministère de la Santé et des Services sociaux

WHEREAS, under section 8 of the Act respecting the Ministère de la Santé et des Services sociaux (R.S.Q., c. M-19.2), no deed, document or writing shall bind the department or be attributed to the Minister unless it is signed by the Minister, the Deputy Minister or an officer and only, in the case of the latter, to the extent determined by regulation of the Government published in the *Gazette officielle du Québec*;

WHEREAS Regulation 1 respecting the signing of certain deeds, documents or writings of the Ministère de la Santé et des Services sociaux was made by Order in Council 420-93 dated 24 March 1993 to authorize various documents of the Ministère de la Santé et des Services sociaux to be signed by certain officers with the same authority as the Minister;

WHEREAS it is expedient to amend the Regulation;

IT IS ORDERED, therefore, on the recommendation of the Minister of Health and Social Services:

THAT the Regulation to amend Regulation 1 respecting the signing of certain deeds, documents or writings of the Ministère de la Santé et des Services sociaux, attached to this Order in Council, be made.

GÉRARD BIBEAU,
Clerk of the Conseil exécutif

Regulation to amend Regulation 1 respecting the signing of certain deeds, documents or writings of the Ministère de la Santé et des Services sociaux*

An Act respecting the Ministère de la Santé et des Services sociaux
(R.S.Q., c. M-19.2, s. 8)

1. Section 2 of Regulation 1 respecting the signing of certain deeds, documents or writings of the Ministère de la Santé et des Services sociaux is amended

(1) by replacing “et de l'équipement” in paragraph 1 by “, de l'équipement et des ressources informationnelles”;

(2) by replacing “Jean Turcotte” in paragraph 4 by “Nicole Laliberté”;

(3) by replacing “des” in paragraph 5 by “générale adjointe aux”.

2. Section 2.1 is amended by replacing “et de l'équipement or the Director of the Direction du budget et des ressources matérielles” by “, de l'équipement et des ressources informationnelles or the Assistant Director General of the Direction générale adjointe au budget”.

3. This Regulation comes into force on the date of its publication in the *Gazette officielle du Québec*.

7883

Gouvernement du Québec

O.C. 1087-2006, 29 November 2006

Environment Quality Act
(R.S.Q., c. Q-2)

Water quality in swimming pools and other artificial pools

Regulation respecting water quality in swimming pools and other artificial pools

WHEREAS, under paragraphs *a* and *b* of section 46, paragraphs *a* and *f* of section 87 and sections 109.1 and 124.1 of the Environment Quality Act (R.S.Q., c. Q-2), the Government may make regulations on the matters set forth therein;

WHEREAS, in accordance with section 124 of the Environment Quality Act and sections 10 and 11 of the Regulations Act (R.S.Q., c. R-18.1), a draft of the Regulation respecting water quality in swimming pools and other artificial pools was published in Part 2 of the *Gazette officielle du Québec* of 26 October 2005 with a notice that it could be made by the Government on the expiry of 60 days following that publication;

WHEREAS it is expedient to make the Regulation with amendments to take into account the comments received following that publication in the *Gazette officielle du Québec*;

IT IS ORDERED, therefore, on the recommendation of the Minister of Sustainable Development, Environment and Parks:

THAT the Regulation respecting water quality in swimming pools and other artificial pools, attached to this Order in Council, be made.

GÉRARD BIBEAU,
Clerk of the Conseil exécutif

* Regulation 1 respecting the signing of certain deeds, documents or writings of the Ministère de la Santé et des Services sociaux, made by Order in Council 420-93 dated 24 March 1993 (1993, *G.O.* 2, 2014), was last amended by the regulation made by Order in Council 89-2006 dated 22 February 2006 (2006, *G.O.* 2, 1065). For previous amendments, refer to the *Tableau des modifications et Index sommaire*, Québec Official Publisher, 2006, updated to 1 September 2006.

Regulation respecting water quality in swimming pools and other artificial pools

Environment Quality Act
(R.S.Q., c. Q-2, s. 46, pars. a and b, s. 87, pars. a and f,
and ss. 109.1 and 124.1)

CHAPTER I

OBJECT, SCOPE AND INTERPRETATION

1. The object of this Regulation is to establish water quality standards for the swimming pools and other artificial pools referred to in section 2, located either indoors or outdoors and operated for swimming, recreation, sports or leisure purposes.

2. This Regulation applies to swimming pools and other artificial pools accessible to the general public or a restricted group of persons such as swimming pools and other artificial pools of the State, municipalities, educational institutions and non-profit organizations, and those in use in tourist establishments, sports centres and water parks.

It also applies to swimming pools and other private artificial pools reserved exclusively for the residents and invited guests of immovables or mobile home parks.

3. This Regulation does not apply to residential swimming pools for the use of only one family or to other swimming pools and artificial pools that are

(1) used only for medical, rehabilitation or religious ritual purposes;

(2) special purpose baths such as floating baths and algae or mud baths;

(3) temporary pools used only for international competition purposes;

(4) fountains or splash pads connected directly to a waterworks system, without water recirculation, and in which the accumulation of water is less than 5 cm;

(5) pools created for architectural or ornamental purposes; or

(6) artificial lakes.

4. For the purposes of this Regulation, “pool” means swimming pools and other artificial pools, including wading pools, whirlpools and splash pads.

The “person in charge of a pool” means the owner or operator of a swimming pool or other artificial pool to which this Regulation applies.

CHAPTER II

WATER QUALITY STANDARDS

5. The microbiological and physicochemical quality of pool water must meet the following standards:

MICROBIOLOGICAL PARAMETERS		
Parameter	Standard	
Fecal coliforms	<1 cfu/100 ml	
<i>Escherichia coli</i>	<1 CFU/100 ml	
<i>Pseudomonas aeruginosa</i>	<1 CFU/100 ml	
<i>Staphylococcus aureus</i>	<30 CFU/100 ml	
PHYSICOCHEMICAL PARAMETERS		
Parameter	Standard	
Alkalinity	60 to 150 mg/l CaCO ₃	
Chloramines	indoor pools	≤ 0.5 mg/l
	outdoor pools	≤ 1.0 mg/l
Residual disinfectant		
Free chlorine:	indoor pools	0.8 to 2.0 mg/l
	outdoor pools	0.8 to 3.0 mg/l
Total bromine	2.0 to 5.0 mg/l	
Ozone	0.0 mg/l	
Hardness	150 to 400 mg/l CaCO ₃	
pH	7.2 to 7.8	
Turbidity	≤ 1.0 NTU	

For the purposes of this Regulation, chloramine concentration is the difference between the measurements of total residual chlorine and free residual chlorine.

If cyanuric acid is used during the disinfection of the water in an outdoor pool, the same residual disinfectant power must be obtained. Cyanuric acid must not be used in indoor pools and its value must not be greater than 60 mg/l.

If a disinfectant other than chlorine or bromine is used, it must have the same residual disinfectant power. The product must be approved or certified by Health Canada.

If ultraviolet (UV) lamps or ozone are used to treat the water, the residual disinfectant power must be obtained with another disinfectant agent.

If equipment for measuring oxidation-reduction potential (ORP) is used, the value measured must be greater than 700 mV.

If sea water is used to fill a pool, the alkalinity, hardness, pH and residual disinfectant must be adjusted to obtain the same disinfectant power as the power obtained with the standards in this section.

6. If the pool water temperature exceeds 35 °C, the standards in section 5 apply, except the standards for chlorine, bromine and ORP which are the following:

Parameter	Standard
Residual disinfectant	
Free chlorine	2.0 to 3.0 mg/l
Total bromine	3.0 to 5.0 mg/l

If equipment for measuring oxidation-reduction potential (ORP) is used, the value measured must be greater than 750 mV.

7. Pool water clarity must be such that the black disc referred to in section 12 of the Regulation respecting safety in public baths (R.R.Q., 1981, c. S-3, r.3) is visible from any point of the deck located 9 metres from the surface.

This section does not apply to whirlpools or wading pools.

8. The person in charge of a fill and draw pool with no water circulation system must drain and disinfect the pool daily before refilling and reusing the pool. The person must do the same in the presence of vomitus or feces.

Sections 5 to 7 and Chapters III and IV do not apply to fill and draw pools.

CHAPTER III WATER QUALITY MONITORING

DIVISION I NATURE AND FREQUENCY OF SAMPLINGS

9. The person in charge of a pool accessible to the general public or a restricted group of persons, or a private pool for the use of immovables or mobile home parks having more than 50 dwelling units must collect or have water samples collected for on-site analysis of the following physicochemical parameters, at the corresponding minimum frequencies:

SAMPLINGS	
Parameter	Frequency
Alkalinity	Once a week
Residual disinfectant (only the measurement of disinfectants used is required)	Before the opening of the pool, after closing and every three hours during operation
Chloramines (only when chlorine is used) operation	Before the opening of the pool, after closing and halfway through operation
pH	Before the opening of the pool, after closing and halfway through operation
Clarity	Before the opening of the pool, after closing and halfway through operation
Temperature	Before the opening of the pool, after closing and halfway through operation

If the pool has continuous measuring and recording equipment, the person in charge of the pool must perform at least one manual test before the pool opens, halfway through its operation and on closing for comparison purposes.

10. The person in charge of a pool accessible to the general public or a restricted group of persons, or a private pool for the use of immovables or mobile home parks having more than 50 dwelling units must also collect or have water samples collected to monitor fecal coliform bacteria or *Escherichia coli* and turbidity.

The samples are to be collected at least once every two weeks of operation for outdoor pools and once every four weeks of operation for indoor pools, with samples taken no fewer than 10 days apart during the pool opening period. In the case of outdoor pools filled with water that does not meet all bacteriological standards in the Regulation respecting the quality of drinking water, made by Order in Council 647-2001 dated 30 May 2001, the first microbiological analysis results must be available at the time the season opens.

11. The person in charge of a private pool for the use of immovables or mobile home parks having more than 9 dwelling units but fewer than 51 dwelling units must collect or have water samples collected at least twice a day, before the opening of the pool and halfway through its operation, for on-site analysis of the pH and residual disinfectant.

12. If there are reasons to suspect that the water made available to the users does not meet the quality standards in Chapter II, the person in charge of the pool concerned must as soon as possible take the necessary measures to enable adequate monitoring of the water quality.

DIVISION II METHODS FOR COLLECTING, PRESERVING, ANALYZING AND SENDING SAMPLES

13. The water samples required by this Chapter must be collected and preserved as well as analyzed on-site or sent, as applicable, in accordance with the methods described in the guide entitled *Méthodes de prélèvement, de conservation et d'analyse des échantillons relatifs à l'évaluation de la qualité de l'eau des piscines et autres bassins artificiels*, published by the Ministère du Développement durable, de l'Environnement et des Parcs.

14. Water samples collected pursuant to section 10 or 12, as applicable, must be sent for analysis to laboratories accredited by the Minister of Sustainable Development, Environment and Parks under section 118.6 of the Environment Quality Act (R.S.Q., c. Q-2).

The analysis request forms furnished by the laboratories must be duly completed and sent with the samples.

The analyzing laboratory must send the sample analysis results to the person in charge of the pool concerned within fifteen days after the date the samples are collected.

CHAPTER IV NON-COMPLIANCE WITH WATER QUALITY STANDARDS

15. The accredited laboratory analyzing a water sample must immediately communicate any result indicating that the water does not meet a microbiological standard to the person in charge of the pool.

16. If the pool water does not meet any of the water quality standards in Chapter II, the person in charge of the pool must take the necessary remedial measures. In particular, the person in charge of the pool must ascertain whether the system is being adequately maintained and operated and, if necessary, adjust the level of residual disinfectant in the water.

In addition, if a sample analysis shows that the water contains bacteria in a concentration greater than the standards in section 5, the person in charge of the pool must collect or have a second sample collected within 24 hours after obtaining the results to test for the presence of the identified microorganism.

17. The person in charge of a pool must immediately evacuate and close access to the pool when events such as the presence of vomitus or feces, water treatment equipment failure or any other infrastructure breakdown occur that may degrade water quality and expose persons to soiling or contamination.

The person in charge of a pool must do the same in the presence of

(1) bacteria in a concentration greater than the standards in section 5 in the second sample collected pursuant to the second paragraph of section 16;

(2) free residual chlorine over 5.0 mg/l;

(3) chloramines over 1.0 mg/l for more than 24 hours;

(4) turbidity greater than 5 NTU;

(5) free residual chlorine less than 0.3 mg/l or total residual bromine less than 0.6 mg/l.

18. In the presence of vomitus or feces in a pool, the person in charge of the pool must, after evacuating and closing access to the pool, increase the free residual chlorine concentration to the following values:

(1) in the case of loose stools, not less than 10.0 mg/l for 16 hours or not less than 20.0 mg/l for 8 hours;

(2) for solid stools or vomitus, not less than 2.0 mg/l for 0.5 hours.

After that period, access to the pool may be permitted as soon as the values of the residual disinfectant and pH meet the standards in Chapter II.

Any other combination equivalent to the concentration of a residual disinfectant (mg/l) multiplied by contact time (hours) is accepted.

19. In the case of water treatment equipment failure or any other infrastructure breakdown, the person in charge of the pool may reopen the pool as soon as the parameters analyzed pursuant to section 9 meet the standards in Chapter II.

In all other cases, the person in charge of the pool may reopen the pool as soon as the parameters that were exceeded again meet the quality standards in Chapter II.

CHAPTER V RECORD

20. The person in charge of a pool accessible to the general public or a restricted group of persons, or a private pool for the use of immovables or mobile home parks having more than 9 dwelling units must maintain a record containing

(1) the results of the water monitoring tests performed pursuant to sections 9 to 12, as applicable;

(2) identification of the pool, the date of the monitoring, the names of the persons who performed the monitoring and the contact information of the person in charge of the pool;

(3) the total number of bathers during the day; and

(4) any information pertaining to the events referred to in sections 17 to 19.

21. Each person performing the water monitoring tests required under section 9, 11 or 12 must enter the results in the record and certify therein that he or she collected, preserved and analyzed, in accordance with this Regulation, the samples required to be analyzed on-site.

The person must also certify in the record that he or she collected, preserved and sent, in accordance with this Regulation, the samples required under section 10 or 12 and that the results received pursuant to section 14 were appended to the record.

The person in charge of the pool must ensure that the entries and certifications in the record comply with the requirements of this section.

22. The record and laboratory reports must be kept for a minimum of two years and be made available to the Minister of Sustainable Development, Environment and Parks and the public health director of the region concerned. The record of the last 30 days must be posted where it may be easily consulted by any interested person.

CHAPTER VI OFFENCES

23. Every person who, in contravention of section 5, 6 or 7, puts water at the disposal of a user and the water does meet the quality standards in Chapter II is liable

(1) to a fine of \$1,000 to \$10,000, in the case of a natural person; and

(2) to a fine of \$2,000 to \$20,000, in the case of a legal person.

24. Every person in charge of a pool who contravenes any of sections 8 to 13, the first or second paragraph of section 14, section 20, the third paragraph of section 21 or section 22 is liable

(1) to a fine of \$1,000 to \$10,000, in the case of a natural person; and

(2) to a fine of \$2,000 to \$20,000, in the case of a legal person.

25. Every person in charge of a pool who contravenes any of sections 16 to 19 is liable

(1) to a fine of \$2,000 to \$20,000, in the case of a natural person; and

(2) to a fine of \$4,000 to \$40,000, in the case of a legal person.

26. Every person who contravenes the first or second paragraph of section 21 is liable to a fine of \$100 to \$300.

27. Every laboratory that contravenes the third paragraph of section 14 or section 15 is liable to a fine of \$2,000 to \$20,000.

28. In the case of a second or subsequent offence, the fines prescribed in this Chapter are doubled.

CHAPTER VII MISCELLANEOUS

29. Section 32 of the Environment Quality Act does not apply to the water treatment systems or equipment for a swimming pool or other artificial pool to which this Regulation applies.

30. This Regulation applies to the immovables in a reserved area or an agricultural zone established under the Act respecting the preservation of agricultural land and agricultural activities (R.S.Q., c. P-41.1).

31. The Minister of Sustainable Development, Environment and Parks must, not later than on 1 January 2012, and thereafter every five years, report to the Government on the advisability of amending this Regulation after considering the scientific and technical knowledge current at the time.

The report is to be made available to the public 15 days at the latest after it has been sent to the Government.

32. This Regulation replaces the Regulation respecting public wading and swimming pools (R.R.Q., 1981, c. Q-2, r.17).

33. This Regulation comes into force on 1 January 2007.

Gouvernement du Québec

O.C. 1092-2006, 29 November 2006

An Act respecting land use planning and development (R.S.Q., c. A-19.1)

Île de Montréal

— Development plan in force in the territory

— Amendments

Amendment to the development plan in force in the territory of Île de Montréal

WHEREAS the Government of Québec wishes to carry out the project to complete Autoroute 25 in the Greater Montréal area;

WHEREAS, under sections 150 and 157 of the Act respecting land use planning and development (R.S.Q., c. A-19.1), the Ministère des Transports may carry out the Autoroute 25 completion project only if the intervention is deemed to be in conformity with the objectives of the development plans in force in the territory of Île de Montréal and in the territory of Ville de Laval;

WHEREAS an opinion on the intervention was sent by the Minister of Transport to Ville de Laval and Ville de Montréal on 8 November 2005 pursuant to sections 149, 150 and 157 of the Act respecting land use planning and development;

WHEREAS on November 30, 2005, the executive council of Ville de Laval passed a resolution to the effect that the Autoroute 25 completion project was in conformity with the development plan in its territory;

WHEREAS, under the Act respecting the exercise of certain municipal powers in certain urban agglomerations (R.S.Q., c. E-20.001), the development plan adopted by the Communauté urbaine de Montréal is under the responsibility of the Montréal urban agglomeration council;

WHEREAS on 2 March 2006, the Montréal urban agglomeration council passed a resolution to the effect that the Autoroute 25 completion project was not in conformity with the objectives of the development plan in its territory;

WHEREAS on 29 March 2006, pursuant to the second paragraph of section 267 of the Act respecting land use planning and development, the Minister of Municipal Affairs and Regions, by Minister's Order 251144, authorized the Minister of Transport to exercise the powers set out in sections 153 to 156 of that Act;

WHEREAS on 26 April 2006, the Minister of Transport requested the Montréal urban agglomeration council to amend the development plan in force in the territory of Île de Montréal to bring the Autoroute 25 completion project into conformity with the objectives of the development plan;

WHEREAS, under section 155 of the Act respecting land use planning and development, the Montréal urban agglomeration council had 90 days after the request to adopt a by-law to amend the development plan;

WHEREAS the Montréal urban agglomeration council failed to adopt a by-law to amend the development plan within that 90-day period;

WHEREAS, under section 156 of the Act respecting land use planning and development, the Government may act in the place of the Montréal urban agglomeration council to amend the development plan in force in the territory of Île de Montréal to bring the project into conformity with the objectives of the development plan;

WHEREAS, in accordance with the procedure set out in section 156 of the Act respecting land use planning and development, public consultation meetings were held on 19 and 20 September 2006;

WHEREAS the vast majority of citizens and groups participating in the meetings expressed an opinion favourable to the Autoroute 25 completion project;

WHEREAS, under the sixth paragraph of section 156 of the Act respecting land use planning and development, after the public consultation meetings, the Government may, by order, adopt a by-law amending the development plan in force to ensure conformity of a government intervention with the objectives of the development plan;

IT IS ORDERED, therefore, on the recommendation of the Minister of Transport and Minister responsible for the Capitale-Nationale region:

THAT the By-law amending the development plan in force in the territory of Île de Montréal, attached to this Order in Council, be adopted;

THAT the By-law come into force on the date of its publication in the *Gazette officielle du Québec*.

GÉRARD BIBEAU,
Clerk of the Conseil exécutif

By-law amending the development plan in force in the territory of Île de Montréal

An Act respecting land use planning and development (R.S.Q., c. A-19.1, s. 156)

1. By-law 89 concerning the development plan of the Communauté urbaine de Montréal, adopted by the Communauté urbaine de Montréal on 20 August 1986, brought into force on 31 December 1987 and amended by By-laws 89-1 to 89-20, is further amended in the chapter dealing with “Main thoroughfares”, as follows:

(1) the article dealing with the “Expressway network” (page 81) is amended by inserting, after the paragraph ending with “the following expressway extensions, as shown on the map:, the following:

“• Autoroute 25, between a point situated south of Henri-Bourassa Boulevard and the territory of Ville de Laval;”;

(2) the article dealing with the “Main arteries network” (page 81) is amended by replacing

“• extension of Autoroute 25 as an urban boulevard from a point on Bombardier Street to Perras Boulevard”

by the following:

“• Autoroute 25 service roads;”;

(3) the map numbered No. 13 “Main thoroughfares” is amended to eliminate the extension of Autoroute 25 as a proposed main artery, starting at a point on Bombardier Street to Perras Boulevard, to then replace that elimination by the expressway extension of Autoroute 25 between a point on Bombardier Street to the Laval territory, and to insert the service roads north of Henri-Bourassa Boulevard.

2. This By-law comes into force on the date of its publication in the *Gazette officielle du Québec*.

Gouvernement du Québec

O.C. 1097-2006, 29 November 2006

Supplemental Pension Plans Act
(R.S.Q., c. R-15.1)

Exemption of certain pension plans from the application of provisions of the Act — Amendment

IN THE MATTER OF the Regulation to amend Regulation respecting the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act

WHEREAS, in accordance with the second paragraph of section 2 of the Supplemental Pension Plans Act (R.S.Q., c. R-15.1), the Government may, by regulation and on the conditions it determines:

— exempt any pension plan or category of pension plan it designates from the application of all or part of the Act, particularly by reason of the special characteristics of the plan or category or by reason of the complexity of the Act in relation to the number of members in the plan;

— prescribe special rules applicable to the plan or category;

WHEREAS, in accordance with sections 10 et 11 of the Regulations Act (R.S.Q., c. R-18.1), a proposed regulation, attached hereto, was published in Part 2 of the *Gazette officielle du Québec* on 30 August 2006, with a notice that it could be made by the Government following expiry of 45-days from its publication;

WHEREAS it is expedient to make the Regulation;

IT IS ORDERED, therefore, upon the recommendation of the Minister of Employment and Social Solidarity:

THAT the Regulation to amend the Regulation respecting the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act attached hereto be made.

GÉRARD BIBEAU,
Clerk of the Conseil exécutif

Regulation to amend the Regulation respecting the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act*

Supplemental Pension Plans Act
(R.S.Q., c. R-15.1, s. 2, 2nd para.)

1. Section 14.7 of the Regulation respecting the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act is replaced with the following section:

“**14.7.** Unless made compulsory by law, no amendment having the effect of increasing the benefits of members or beneficiaries may be made to a pension plan so long as any amount determined in accordance with paragraph 1 of the first paragraph of section 14.6 with respect to such plan has not been fully amortized, unless a sum equal to the greater of the following values is paid into the pension fund:

- (1) the value of the additional commitments resulting from the amendment, determined on the basis of funding;
- (2) the value of such commitments, determined on the basis of solvency.

The sum shall be paid immediately upon transmission of the report on the actuarial valuation required under paragraph 2 of section 118 of the Supplemental Pension Plans Act to the Régie des rentes du Québec. To such sum shall be added accrued interest, if any, from the date of the valuation, calculated at the rate referred to in section 48 of the Act.

Under these conditions, no unfunded actuarial liability and no sum determined in application of paragraph 4 of the second paragraph of section 137 of the Supplemental Pension Plans Act have to be established as a result of the amendment.”

2. This Regulation comes into force on the fifteenth day following its publication in the *Gazette officielle du Québec*.

7886

Gouvernement du Québec

O.C. 1098-2006, 29 November 2006

Supplemental Pension Plans Act
(R.S.Q., c. R-15.1)

Exemption of certain categories of pension plans from the application of provisions of the Act and the exemption of certain pension plans from the application of provisions of the Act — Amendments

IN THE MATTER OF the Regulation to amend the Regulation respecting the exemption of certain categories of pension plans from the application of provisions of the Supplemental Pension Plans Act and the Regulation respecting the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act

WHEREAS, in accordance with the second paragraph of section 2 of the Supplemental Pension Plans Act (R.S.Q., c. R-15.1), the Government may, by regulation and on the conditions it determines:

— exempt any pension plan or category of pension plan it designates from the application of all or part of the Act, particularly by reason of the special characteristics of the plan or category or by reason of the complexity of the Act in relation to the number of members in the plan;

— prescribe special rules applicable to the plan or category;

WHEREAS, in accordance with sections 10 et 11 of the Regulations Act (R.S.Q., c. R-18.1), a proposed regulation, attached hereto, was published in Part 2 of the *Gazette officielle du Québec* on 30 August 2006, with a notice that it could be made by the Government following expiry of 45-days from its publication;

WHEREAS it is expedient to make the Regulation, with changes to take into account comments made by the interested parties;

IT IS ORDERED, therefore, upon the recommendation of the Minister of Employment and Social Solidarity:

THAT the Regulation to amend the Regulation respecting the exemption of certain categories of pension plans from the application of provisions of the Supplemental Pension Plans Act and the Regulation respecting

* The Regulation respecting the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act, made by Order in Council 415-2004, dated 28 April 2004 (*G.O.* 2004, 2, 1543), was amended by the regulation made by Order in Council 987-2005, dated 19 October 2005 (*G.O.* 2005, 2, 4752).

the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act attached hereto be made.

GÉRARD BIBEAU,
Clerk of the Conseil exécutif

Regulation to amend the Regulation respecting the exemption of certain categories of pension plans from the application of provisions of the Supplemental Pension Plans Act* and Regulation respecting the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act**

Supplemental Pension Plans Act
(R.S.Q., c. R-15.1, s. 2, 2nd para.)

1. The Regulation respecting the exemption of certain categories of pension plans from the application of provisions of the Supplemental Pension Plans Act is amended by adding, after section 47, the following division:

**“DIVISION IX
FUNDING AND SOLVENCY OF CERTAIN
PENSION PLANS**

48. This division applies to pension plans to which chapter X of the Act applies and of which the employer is a municipality, a body referred to in section 18 of the Act respecting the Pension Plan of Elected Municipal Officers (R.S.Q., c. R-9.3) or an educational institution at the university level referred to in paragraphs 1 to 11 of section 1 of the Act respecting educational institutions at the university level (R.S.Q., c. E-14.1).

* The last amendments to the Regulation respecting the exemption of certain categories of pension plans from the application of provisions of the Supplemental Pension Plans Act, approved by Order in Council 1160-90, dated 8 August 1990 (*G.O.* 1990, 2, 3261), were made by the regulation made by Order in Council 798-2006, dated 22 August 2006 (*G.O.* 2006, 2, 4235). For the preceding amendments, see the *Tableau des modifications et Index sommaire*, Éditeur officiel du Québec, 2006, updated to 1 September 2006.

** The Regulation respecting the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act, made by Order in Council 436-2004, dated 28 April 2004 (2004, *G.O.* 2, 2251), was amended by the regulation made by Order in Council 987-2005, dated 19 October 2005 (*G.O.* 2005, 2, 6258).

In the case of a multi-employer pension plan, even not considered as such in application of section 11 of the Supplemental Pension Plans Act, this section applies only insofar as, on 1 January 2007 or on the effective date of the plan, if after 1 January 2007, and at the end of each plan fiscal year thereafter, at least 90% of the plan's active members are employees of the employers referred to in the first paragraph.

49. The plans referred to in this section are exempted from the application of the provisions of sections 130, 137 and 140 of the Act and are consequently subject to the conditions set out in this division. Furthermore, the terms and conditions provided for in sections 55 and 56 are substituted, with respect to those plans, for the terms and conditions set out in sections 146.1 to 146.3 of the Act.

50. For the determination of the funding of a pension plan from the first complete actuarial valuation whose date is after 30 December 2006, the assets shall be determined according to their liquidation value, or an estimate thereof.

51. For the application of this division, paragraph 2 of section 126 of the Act applies by replacing the date on which the amendment takes effect with the date of the actuarial valuation.

52. The actuarial valuation required under paragraph 2 of section 118 of the Act may be partial and thus limited to the determination on a funding basis of the value of the additional obligations arising from the amendment to the pension plan or may only concern the variation in the current service contribution arising from the amendment. The value or the variation shall be determined on a funding basis and using the same assumptions and methods as were used for the preceding actuarial valuation, unless they are not appropriate in view of the nature of the amendment made to the pension plan.

However, where the amendment to the pension plan increases the pensions already in payment and the additional obligations arising from the amendment are insured at the date on which the actuarial valuation report is prepared, the value of the obligations may be assumed to correspond to the premium paid to the insurer, discounted at the date of actuarial valuation according to the rate of return of the pension fund.

Where the amendment increases the obligations arising from the pension plan, an improvement unfunded actuarial liability equal to the value of the additional obligations shall be determined on a funding basis, unless the actuary certifies that in his opinion the plan would be fully funded if a complete actuarial valuation were made at the effective date of the amendment.

Unless the actuary certifies that in his opinion the degree of solvency of the pension plan at the valuation date is or exceeds 100%, the actuary shall estimate the degree of solvency of the plan at the valuation date and indicate it in the actuary's report. In addition, the estimated degree of solvency applies from the date the valuation report is transmitted to the Régie for the purpose of paying out the value of benefits to members and beneficiaries under section 142.

53. The last paragraph of section 129 of the Act notwithstanding, the maximum amortization period for any improvement unfunded actuarial liability shall be 5 years from the date of determination of the liability.

54. If the actuarial valuation used to determine the value of the additional obligations arising from an amendment to the pension plan shows that the degree of solvency of the plan is less than 90%, a special amortization payment must be paid into the pension fund, payable in full on the day following the date of the valuation and equal to or greater than the lesser of:

(1) the amount corresponding to the value on a solvency basis of the additional obligations resulting from the amendment;

(2) the amount corresponding to the assets lacking for the plan's degree of solvency to be 90%.

The special contribution shall be used to reduce the amortization amounts related to the improvement unfunded actuarial liability determined by the actuarial valuation. If such contribution is not sufficient to eliminate the liability, the reduction shall be applied pro rata to each of the amortization amounts to be paid.

For the application of this section, where, at the evaluation date, the plan's liabilities on a funding basis include commitments resulting from an amendment whose effective date is subsequent to the valuation date, the liabilities, on the basis of solvency, shall be determined under the assumption that the effective date of the amendment is the valuation date and that the degree of solvency is the degree obtained by using the liabilities thus determined.

55. The assets of the pension plan may not be appropriated for payment of employer contributions unless the most recent actuarial valuation shows that there exist surplus assets on the basis both of funding and of solvency.

The maximum amount of assets that may be appropriated for payment of employer contributions shall be determined at the time of the most recent actuarial valuation of the plan. It shall be equal:

(1) if it is a complete actuarial valuation, to the lesser of the plan's surplus assets as determined on a funding basis and on a solvency basis;

(2) if it is a partial actuarial valuation, to the amount shown on a certification of the actuary attesting that, were a complete actuarial valuation to be carried out at the valuation date, it would allow the determination, in accordance with paragraph 1 of a maximum amount at least equal to the amount shown.

56. The appropriation of pension plan assets for payment of employer contributions shall cease:

(1) at the date of any actuarial valuation that shows that there are no more surplus assets on the basis either of funding or of solvency;

(2) at the date of the end of the fiscal year that follows the date of an actuarial valuation that satisfied the first paragraph of section 55 where no actuarial valuation was made at that fiscal year ending date.

57. A report referred to in section 119 of the Act shall, unless it is a report on a partial actuarial valuation, contain the information and declarations mentioned in the first paragraph of section 4 of the Regulation respecting supplemental pension plans, except those referred to in paragraph 8 of the said paragraph, by substituting the following information for that required, respectively, by paragraphs 6, 13, 15 and 17 of that paragraph:

(1) the employer contribution provided for in the plan, where such contribution is greater than the contribution provided for in sections 39 of the Act and 54 of this Regulation;

(2) where the plan's degree of solvency is less than 100%, the value, determined at the date of the actuarial valuation by using an interest rate identical to that used to determine the plan's liabilities in order to determine solvency, of the amounts remaining to be paid in order to amortize any initial unfunded actuarial liability and of the amounts provided for the amortization, in the 5 years after that date, of any other unfunded actuarial liability;

(3) a description of the amendments made in application of sections 133 and 134 of the Act to the amounts and amortization periods indicated in the most recent report on the valuation of the entire plan and in any subsequent report prepared in application of section 52;

(4) the maximum amount referred to in section 55.

A report to which the first paragraph applies shall furthermore, where it determines the value of the additional commitments resulting from the amendment of the plan, contain the information provided for in the first and second paragraphs of section 58.

58. A report covering only a partial actuarial valuation referred to in section 52 shall contain the information provided for in section 5 of the Regulation respecting supplemental pension plans, by substituting the following information for that required, respectively, by paragraphs 7 to 10 of that section:

(1) the employer contribution provided for in the plan, where such contribution is greater than the contribution provided for in sections 39 of the Act and 54 of this Regulation;

(2) a certification that the value of the additional commitments and the change in the current service contribution referred to in paragraphs 4 and 6 of section 5 of the Regulation respecting supplemental pension plans were determined by using the same actuarial assumptions and methods as those used for the most recent actuarial valuation of the plan or, where the first or second of paragraph of section 52 so authorizes, the description of the changes made to such assumptions and methods;

(3) the certifications required, if any, pursuant to section 52 and the assumptions used for the purpose of estimating the degree of solvency referred to in the fourth paragraph of that section;

(4) the maximum amount referred to in section 55.

The report shall also contain the following information:

(1) a certification that the amendment to the plan was made after 30 December 2006 or before 31 December 2006;

(2) the amount, if any, of the special contribution determined in application of section 54.

Where the valuation is also intended to show that there exist surplus assets that may be appropriated for payment of employer contributions, the report shall also contain the information provided for in paragraphs 3, 4 and 6 of section 59. The certification referred to in paragraph 2 of the first paragraph shall also include an estimate of the value of the plan's commitments.

59. A report related to a partial actuarial valuation referred to in section 55 shall contain the following information:

(1) the name of the plan and the number assigned to it by the Régie;

(2) the valuation date;

(3) the maximum amount of surplus assets that may be appropriated for payment of employer contributions until the date of the end of the fiscal year that follows the date of the actuarial valuation;

(4) the certification required pursuant to the second paragraph of section 55;

(5) the certification that on a funding basis, the value of the commitments was estimated using the same actuarial assumptions and methods as those used for the most recent actuarial valuation of the plan;

(6) the assumptions and actuarial methods used to estimate the value of the plan's commitments, on the basis of solvency, at the valuation date;

(7) the name of the signatory, his professional title, the name and address of his office and the date of his signature.

60. Every report on an actuarial valuation shall, in the case of a multi-employer pension plan, even not considered as such in application of section 11 of the Act, indicate whether at least 90% of the plan's active members are employees of employers referred to in the first paragraph of section 48.

61. Every certification required for the purpose of an actuarial valuation referred to in this division shall reflect the financial position of the plan at the date of the actuarial valuation, taking into account, in particular, the actual rate of return of the pension fund, the changes in interest rates on a solvency basis and the contributions actually paid since the last actuarial valuation of the whole plan.

62. The payment of amortization amounts determined in application of section 140 of the Act and payable after 31 December 2006 is no longer required. The plans referred to in this division are deemed to satisfy the second paragraph of section 121 of the Act until the date of the first complete actuarial valuation whose date is after 30 December 2006.

63. At the time of the first complete actuarial valuation whose date is after 30 December 2006, the sum determined in application of paragraph 4 of the second paragraph of section 137 of the Act pursuant to a prior actuarial valuation and the amortization amounts related

to such sum shall be eliminated. Such elimination is carried out prior to the application of sections 133, 134 and 306.1.1 of the Act.

64. Sections 51 to 54 shall apply to amendments made after 30 December 2006, without regard to the effective date such amendments, as well as to amendments whose effective date is after 30 December 2006.”.

2. Section 1 of the Regulation respecting the exemption of certain pension plans from the application of provisions of the Supplemental Pension Plans Act is amended by adding, after paragraph 1, the following paragraph:

“(1.1) the provisions mentioned in division IX of the Regulation respecting the exemption of certain categories of pension plans from the application of provisions of the Supplemental Pension Plans Act made by Order in Council 1160-90, dated 8 August 1990, in accordance with the terms and conditions provided for in that division;”.

3. This Regulation comes into force on 31 December 2006.

O.C. 1106-2006, 6 December 2006

Police Act
(R.S.Q., c. P-13.1)

Sûreté du Québec — Amounts payable by municipalities for services — Amendments

Regulation to amend the Regulation respecting the amounts payable by municipalities for the services provided by the Sûreté du Québec

WHEREAS section 77 of the Police Act (R.S.Q., c. P-13.1) provides that the cost of the police services provided by the Sûreté du Québec is to be established using the calculation methods or rate schedule prescribed by regulation of the Government and is to be borne by the local municipality or municipalities concerned;

WHEREAS, in accordance with the Police Act, the Government by Order in Council 497-2002 dated 24 April 2002 made the Regulation respecting the amounts payable by municipalities for the services provided by the Sûreté du Québec;

WHEREAS it is expedient to amend the Regulation;

WHEREAS, under sections 10 and 13 of the Regulations Act (R.S.Q., c. R-18.1), a draft of the Regulation to amend the Regulation respecting the amounts payable by municipalities for the services provided by the Sûreté du Québec was published in Part 2 of the *Gazette officielle du Québec* of 16 August 2006 with a notice that it could be made by the Government on the expiry of 25 days following that publication;

WHEREAS the 25-day period has expired;

WHEREAS it is expedient to make the Regulation without amendment;

IT IS ORDERED, therefore, on the recommendation of the Minister of Public Security:

THAT the Regulation to amend the Regulation respecting the amounts payable by municipalities for the services provided by the Sûreté du Québec, attached to this Order in Council, be made.

GÉRARD BIBEAU,
Clerk of the Conseil exécutif

Regulation to amend the Regulation respecting the amounts payable by municipalities for the services provided by the Sûreté du Québec*

Police Act
(R.S.Q., c. P-13.1, s. 77)

1. The Regulation respecting the amounts payable by municipalities for the services provided by the Sûreté du Québec is amended by adding the following after section 1:

“1.1. The amount of the contribution for all police services for a municipal fiscal year is obtained using the following calculation:

$$A \times ((B \times C) \times D) \times (E / F)$$

$$A = \begin{array}{l} 57\% \text{ in } 2007 \\ 55\% \text{ in } 2008 \\ 53\% \text{ in } 2009 \text{ and subsequent years;} \end{array}$$

* The Regulation respecting the amounts payable by municipalities for the services provided by the Sûreté du Québec, made by Order in Council 497-2002 dated 24 April 2002 (2002, *G.O.* 2, 2293), has been amended once, by the regulation made by Order in Council 939-2002 dated 21 August 2002 (2002, *G.O.* 2, 4505).

B = the average cost of a police officer of the Sûreté du Québec obtained by dividing the sum of the income indicated, as police services charged to the municipalities and the contribution of the Sûreté du Québec, in the income statement filed in the financial statements of the police services fund for the fiscal year of the fund that ended in the year preceding the municipal fiscal year concerned, by the number of officers of the Sûreté du Québec assigned by agreement to local or regional municipalities as at 1 January of the preceding municipal fiscal year;

C = the projected consumer price index for the current year as established by the Minister of Finance in the budget plan for the preceding year;

D = the number of police officers of the Sûreté du Québec assigned by agreement to local or regional municipalities as at 1 January of the municipal fiscal year concerned;

E = the amount of the estimated contribution of a municipality established for the current year in accordance with sections 2 to 5; and

F = the total of the amount of the estimated contributions of all the municipalities served by the Sûreté du Québec established in accordance with sections 2 to 5.”.

2. Section 2 is amended by inserting “estimated” before “contribution” wherever that word appears.

3. Section 5 is amended by replacing “contributions payable, by” in subparagraph 1 of the second paragraph by “estimated contributions for”.

4. The following is inserted after section 5:

“**5.1.** The amount of the contribution established under section 1.1 is revised during the municipal fiscal year concerned using the following formula:

$$A \times B \times (C / D)$$

A = 57% in 2007
55% in 2008
53% in 2009 and subsequent years;

B = the sum of the income indicated, as police services charged to the municipalities and the contribution of the Sûreté du Québec, in the income statement filed in the financial statements of the police services fund for the fiscal year of the fund that ended during the municipal fiscal year concerned;

C = the amount of the estimated contribution of a municipality established for the current year in accordance with sections 2 to 5; and

D = the total amount of the estimated contributions of all the municipalities served by the Sûreté du Québec established in accordance with sections 2 to 5.

The amount of the difference between the revised contribution and the contribution established under section 1.1 is added to the contribution for the following municipal fiscal year or subtracted from that contribution, as the case may be. If the municipality no longer receives police services after 1 January of that fiscal year and the amount cannot be added to or subtracted from the contribution, the amount is to be claimed from or refunded to the municipality, as the case may be. That amount in no case bears interest.”.

5. Section 10 is amended by inserting “established under section 1.1 in proportion to the period concerned” after “contribution”.

6. Section 13 is replaced by the following:

“**13.** Where, within the time limits prescribed by regulation, the municipalities of a regional county municipality paid in full the contribution established under section 1.1 for the police services of the Sûreté du Québec for a municipal fiscal year, the regional county municipality is eligible for a refund if the contribution revised pursuant to section 5.1 for those municipalities exceeds 80% of the actual costs for the services provided by the officers of the Sûreté du Québec assigned to the regional county municipality. The refund paid by the Minister is equal to the difference between the amount established as being 80% of the actual costs of the Sûreté du Québec and the contribution revised pursuant to section 5.1.

The actual costs for the officers of the Sûreté du Québec are established on the basis of the sum of the income indicated, as police services charged to the municipalities and the contribution of the Sûreté du Québec, in the income statement filed in the financial statements of the police services fund for the fiscal year of the fund that ended during the municipal fiscal year concerned.”.

7. For the 2006 municipal fiscal year, the municipalities are entitled to a refund of an amount equal to the difference between the contribution actually paid and the contribution they would have paid had the contribution been established pursuant to section 1.1 of the Regulation respecting the amounts payable by municipalities

for the services provided by the Sûreté du Québec, enacted by section 1, but where A=59%, B=\$129,179, C=2.3% and D=3,058. The amount does not bear interest.

8. This Regulation comes into force on the fifteenth day following the date of its publication in the *Gazette officielle du Québec*.

Gouvernement du Québec

O.C. 1121-2006, 6 December 2006

Worker's Compensation Act
(R.S.Q., c. A-3)

Table of indemnities payable for 2007

Regulation respecting the table of indemnities payable for 2007 under the Worker's Compensation Act

WHEREAS, under paragraph *d* of section 124 of the Worker's Compensation Act (R.S.Q., c. A-3), the Commission de la santé et de la sécurité du travail may make regulations on the matters mentioned therein;

WHEREAS, under section 125 of the Worker's Compensation Act, the regulations made under section 124 of the Act must be submitted to the Government for approval;

WHEREAS, in accordance with sections 10 and 11 of the Regulations Act (R.S.Q., c. R-18.1), a draft of the Regulation attached to this Order in Council was published in Part 2 of the *Gazette officielle du Québec* of 21 June 2006, with a notice that on the expiry of 45 days following that publication, it could be made by the Commission, with or without amendment, and submitted to the Government for approval;

WHEREAS the Commission made the Regulation respecting the table of indemnities payable under the Worker's Compensation Act, with amendments, at its sitting of 16 November 2006;

WHEREAS the amendments are related, in particular, to the taking into account by the Commission of the most recent data necessary for computing the amounts appearing in the Regulation;

WHEREAS it is expedient to approve the Regulation;

IT IS ORDERED, therefore, on the recommendation of the Minister of Labour:

THAT the Regulation respecting the table of indemnities payable for 2007 under the Worker's Compensation Act, attached to this Order in Council, be approved.

GÉRARD BIBEAU,
Clerk of the Conseil exécutif

Regulation respecting the table of indemnities payable for 2007 under the Workmen's Compensation Act

Workmen's Compensation Act
(R.S.Q., c. A-3, s. 124, para. *d*)

1. The family situations considered for the purpose of computing a worker's weighted net income are as follows:

(1) Single:

- (a) Worker without adult dependent;
- (b) Worker with 1 adult dependent;
- (c) Worker with 2 adult dependents;
- (d) Worker with 3 adult dependents;
- (e) Worker with 4 adult dependents or more.

(2) Single-parent family:

- (a) Worker without adult dependent;
- (b) Worker with 1 adult dependent;
- (c) Worker with 2 adult dependents;
- (d) Worker with 3 adult dependents;
- (e) Worker with 4 adult dependents or more.

(3) Worker with dependent spouse:

- (a) Worker with spouse;
- (b) Worker with spouse and 1 adult dependent;
- (c) Worker with spouse and 2 adult dependents;
- (d) Worker with spouse and 3 adult dependents;
- (e) Worker with spouse and 4 adult dependents or more.

(4) Worker with non-dependent spouse:

- (a) Worker without adult dependent;
- (b) Worker with 1 adult dependent;
- (c) Worker with 2 adult dependents;
- (d) Worker with 3 adult dependents;
- (e) Worker with 4 adult dependents or more.

2. For the purpose of establishing the indemnity payable under the Workmen's Compensation Act (R.S.Q., c. A-3), the worker's gross income shall be taken into consideration up to the maximum yearly insurable earnings of \$59,000 for the year 2007.

3. For 2007, Schedule A sets forth the income brackets considered in computing a worker's weighted net income, and for each family situation, the amounts representing the indemnity payable under the Workmen's Compensation Act.

4. Where a worker's gross income falls between two income brackets, the indemnity payable under the Workmen's Compensation Act shall be determined on the basis of the higher income bracket.

5. This Regulation comes into force on the date of publication in the *Gazette officielle du Québec* or on January 1, 2007, whichever is the later of the two dates.

SCHEDULE A

(a. 3)

**INDEMNITY PAYABLE UNDER THE WORKMEN'S COMPENSATION ACT
(90% OF WEIGHTED NET INCOME FOR 2007)**

	Annual gross Income					Annual gross Income					
	Indemnity payable under the Workmen's Compensation Act (90% of weighted net income for 2007)					Indemnity payable under the Workmen's Compensation Act (90% of weighted net income for 2007)					
	Single Number of adult dependents					Single Number of adult dependents					
	0	1	2	3	4 and more	0	1	2	3	4 and more	
100	88.31	88.31	88.31	88.31	88.31	4,800	4,181.04	4,181.04	4,181.04	4,181.04	4,181.04
200	176.62	176.62	176.62	176.62	176.62	4,900	4,264.90	4,264.90	4,264.90	4,264.90	4,264.90

M.O., 2006-023**Order of the Minister of Health and Social Services
making the Regulation to amend the Regulation
respecting the List of medications covered by the
basic prescription drug insurance plan dated
5 December 2006**

An Act respecting prescription drug insurance
(R.S.Q., c. A-29.01; 2005, c. 40)

THE MINISTER OF HEALTH AND SOCIAL SERVICES,

CONSIDERING section 60 of the Act respecting prescription drug insurance (R.S.Q., c. A-29.01; 2005, c. 40, s. 22, par. 1);

CONSIDERING Order 1999-014 dated 15 September 1999 of the Minister of State for Health and Social Services and Minister of Health and Social Services making the Regulation respecting the List of medications covered by the basic prescription drug insurance plan;

CONSIDERING that it is necessary to amend the List of medications attached to that Regulation;

CONSIDERING that the Conseil du médicament has been consulted on the draft regulation;

MAKES the Regulation to amend the Regulation respecting the List of medications covered by the basic prescription drug insurance plan, the text of which is attached hereto.

Québec, 5 December 2006

PHILIPPE COUILLARD,
Minister of Health and Social Services

Regulation to amend the Regulation respecting the List of medications covered by the basic prescription drug insurance plan*

An Act respecting prescription drug insurance (R.S.Q., c. A-29.01, s. 60; 2005, c. 40, s. 22, par. 1)

1. The Regulation respecting the List of medications covered by the basic prescription drug insurance plan is amended, in the List of medications attached thereto, in Appendix III entitled “Products for Which the Wholesaler’s Mark-up is Limited to a Maximum Amount”, by inserting the following after the line concerning the medication “Suprefact Depot 3 mois Implant 9,45 mg”:

“Pfizer	Sutent Caps. 12,5 mg	28
Pfizer	Sutent Caps. 25 mg	28
Pfizer	Sutent Caps. 50 mg	28”.

2. The List of medications attached to that Regulation is amended, in Appendix IV entitled “Exceptional Medications, With Recognized Indications for Payment Purposes”, by inserting the following after the medication “SOMATREM” and the accompanying indications:

“SUNITINIB MALATE

◆ for treatment of an inoperable, recidivant or meta-static gastrointestinal stromal tumour, in persons whose ECOG performance status is ≤ 2 and:

- who have not responded to an imatinib treatment (primary resistance);
- whose cancer has evolved after initially responding to imatinib (secondary resistance);
- who have an intolerance to imatinib.

Authorizations are given for a daily dose of 50 mg for four weeks every six weeks.

The initial authorization is for a maximum duration of six months.

Upon subsequent requests, the physician must provide evidence of a complete or partial response or of disease stabilization, confirmed by imaging. In addition, the ECOG performance status must remain ≤ 2 . Subsequent authorizations will also be for maximum durations of six months.”.

3. The List of medications is amended:

(1) by inserting, in the exceptional medications section after the medication “SOMATREM” and the accompanying information, the following medications and the accompanying information:

CODE	BRAND NAME	MANUFACTURER	SIZE	COST OF PKG. SIZE	UNIT PRICE
EXCEPTIONAL MEDICATIONS					
SUNITINIB (MALATE) 					
Caps.				12.5 mg	
02280795	Sutent	Pfizer	28	1737.00	62.0357
Caps.				25 mg	
02280809	Sutent	Pfizer	28	3473.99	124.0711
Caps.				50 mg	
02280817	Sutent	Pfizer	28	6947.99	248.1425

* The Regulation respecting the List of medications covered by the basic prescription drug insurance plan, made by Minister’s Order 1999-014 dated 15 September 1999 (1999, G.O. 2, 3197) of the Minister of State for Health and Social Services and Minister of Health and Social Services, was last amended by the Regulations made by Minister’s Orders 2006-017 dated 1 August 2006 (2006, G.O. 2, 2911) and 2006-021 dated 18 September 2006 (2006, G.O. 2, 3440) of that Minister. For previous amendments, refer to the *Tableau des modifications et Index sommaire*, Éditeur officiel du Québec, 2006, updated to 1 September 2006.

(2) by replacing the information accompanying the following medications by the following information:

CODE	BRAND NAME	MANUFACTURER	SIZE	COST OF PKG. SIZE	UNIT PRICE

4. This Regulation comes into force on 13 December 2006.

Draft Regulations

Draft Regulation

Building Act
(R.S.Q., c. B-1.1)

Construction Code — Amendment

Notice is hereby given, in accordance with sections 10 and 11 of the Regulations Act (R.S.Q., c. R-18.1), that the Regulation to amend the Construction Code, appearing below, may be approved by the Government, with or without amendment, on the expiry of 45 days following this publication.

The purpose of the draft Regulation is to establish throughout Québec the basic standards that apply to the construction work of petroleum equipment installations (installations to use, store or dispense petroleum products), to ensure the quality of the work and the safety of the installations. The standards are now adopted by the Régie du bâtiment du Québec under the Building Act (R.S.Q., c. B-1.1).

The standards constitute Chapter VIII of the Construction Code and are essentially the requirements already set out in the Act respecting petroleum products and equipment (R.S.Q., c. P-29.1) and the regulatory requirements currently in force, made under that Act and set out in the Regulation respecting petroleum products and equipment, approved by Order in Council 753-91 dated 29 May 1991 (1991, *G.O.* 2, 1839). Adaptations have been made to the Construction Code to take into account the provisions of the Building Act, to facilitate their applications and mainly to distinguish between the responsibilities of architects, engineers and contractors and those of owners of petroleum equipment installations, which are integrated into the Safety Code.

The draft Regulation also includes framework measures for the monitoring of compliance with the requirements, in particular a process to monitor the compliance of construction work performed on high-risk petroleum equipment forming part of a petroleum equipment installation, using certificates of conformity that must be produced by persons recognized by the Board and furnished by contractors and owner-builders.

The draft Regulation has a positive impact on public safety because it retains the existing requirements. The draft Regulation has, however, an economic impact on

certain enterprises that are to comply with the additional requirements for underground tanks. The impact is estimated at \$3,325M for a period of five years and could affect some 35 small and medium-sized businesses and 80 large businesses. The draft Regulation was the subject of a regulatory impact statement.

Further information may be obtained by contacting Pierre Gauthier, Régie du bâtiment du Québec, 800, place D'Youville, 15^e étage, Québec (Québec) G1R 5S3; telephone: 418 643-9896 or fax: 418 646-9280.

Any interested person having comments to make on the matter is asked to send them in writing, before the expiry of the 45-day period, to Daniel Gilbert, President and Chief Executive Officer, Régie du bâtiment du Québec, 545, boulevard Crémazie Est, 3^e étage, Montréal (Québec) H2M 2V2.

LAURENT LESSARD,
Minister of Labour

Regulation to amend the Construction Code*

Building Act
(R.S.Q., c. B-1.1, ss. 173, 176, 176.1, 178, 179, 185, 1st par., subpars. 1, 2.1, 6.2, 6.3, 37 and 38 and s. 192; 2005, c. 10, ss. 59, 62 and 63)

1. The Construction Code is amended by adding the following after section 7.08:

“CHAPTER VIII PETROLEUM EQUIPMENT INSTALLATION

DIVISION I INTERPRETATION

8.01. In this Chapter, unless the context indicates otherwise,

* The Construction Code, approved by Order in Council 953-2000 dated 26 July 2000 (2000, *G.O.* 2, 4203), was last amended by the regulations approved by Orders in Council 120-2006 dated 28 February 2006 (2006, *G.O.* 2, 1118) and 986-2006 dated 25 October 2006 (2006, *G.O.* 2, 3569). For previous amendments, refer to the *Tableau des modifications et Index sommaire*, Québec Official Publisher, 2006, updated to 1 September 2006.

“airport outlet” means a motor fuel dispensing outlet where aviation fuel is dispensed to an aircraft; (*poste d’aéroport*)

“aviation fuel” means aviation gasoline and aviation turbine fuel; (*carburant d’aviation*)

“aviation turbine fuel” means a medium petroleum distillate for use as motor fuel in turbine engines; (*carburéacteur*)

“biodiesel fuel” means an oxygenated ester- or ether-based fuel derived from vegetable oils or animal fats; (*carburant bio-diesel*)

“booth” means a shelter situated within a dispensing area, to be used for the sale of motor fuel and, where applicable, for controlling motor fuel dispensing equipment; (*kiosque*)

“bulk plant” means a facility for the storage of bulk petroleum products and having a tank truck, tank car or a cargo tank trailer loading facility; (*dépôt*)

“designated location” means a quarry, mine, forest operations site, agricultural establishment, construction site, snowmobile stop, hunting or fishing camp, or a location not accessible year round by a practicable road in the Québec highway network; (*endroit désigné*)

“diesel fuel” means a medium petroleum distillate for use as motor fuel in a compression ignition engine; (*carburant diesel*)

“first storey” means the highest storey having its floor not more than 2 m above average ground level; (*premier étage*)

“flash point” means the minimum temperature at which a liquid within a container gives off vapour in sufficient concentration to form an ignitable mixture with air near the surface of the liquid; (*point d’éclair*)

“fuel oil” means a homogeneous blend of hydrocarbon compounds for use as fuel; (*mazout*)

“gasoline” means a light petroleum distillate for use as motor fuel in an engine with electrical ignition; (*essence*)

“high-risk petroleum equipment” means petroleum equipment having one of the following characteristics:

(1) petroleum equipment, one or more components of which is partially or completely buried, having a capacity of

(a) 500 or more litres, when it is installed to store motor fuel; or

(b) 4,000 or more litres, if it is installed to store fuel oil, except petroleum equipment of less than 10,000 L used for heating a single-family dwelling;

(2) aboveground petroleum equipment that has a capacity of 2,500 or more litres, if it is installed to store gasoline, fuel ethanol or aviation fuel;

(3) petroleum equipment that has a capacity of 10,000 or more litres, if it is installed to store a petroleum product; or

(4) petroleum equipment installed for the purposes of trade in petroleum products;

The capacity of petroleum equipment that is joined, connected to or used with other petroleum equipment is determined by adding together their respective capacities; (*équipement pétrolier à risqué élevé*)

“lower explosive limit” means the minimum concentration of vapour in air at which the propagation of flame occurs on contact with an ignition source; (*limite inférieure d’explosivité*)

“marina outlet” means a motor fuel dispensing outlet where motor fuel is dispensed to motorized vessels; (*poste de marina*)

“motor fuel” means a combustible substance used in an internal combustion engine that includes gasoline, diesel fuel, biodiesel fuel, fuel ethanol and aviation fuel; (*carburant*)

“motor fuel dispensing outlet” means a self-serve facility, an unattended self-serve facility, an airport outlet, a user outlet, a marina outlet and a service station; (*poste de distribution de carburant*)

“petroleum equipment” means any container, piping, apparatus or other equipment or device that may be used for the distribution, handling, transfer or storage of petroleum products, or forming part of a petroleum equipment installation; (*équipement pétrolier*)

“recognized person” means a person able to produce or furnish a certificate of conformity pursuant to sections 16 and 35 of the Building Act; (*personne reconnue*)

“self-serve facility” means a motor fuel dispensing outlet where motor fuel is dispensed to a vehicle under the supervision of an attendant; (*libre-service avec surveillance*)

“service centre” means a site where the fuel system of an internal combustion engine is serviced; (*atelier de mécanique*)

“storey” means that part of a building between the top of a floor and the top of the next floor above it, or if there is no floor above it, that part between the top of a floor and the ceiling; (*étage*)

“tank” means a container that holds more than 225 L; (*réservoir*)

“unattended self-serve facility” means a motor fuel dispensing outlet for commercial vehicles where motor fuel is dispensed to a vehicle without supervision of an attendant; (*libre-service sans surveillance*)

“underground piping” means piping or part of piping that is buried in the ground; (*tuyauterie souterraine*)

“underground tank” means a tank that is partially or entirely buried in the ground; (*réservoir souterrain*)

“user outlet” means a motor fuel dispensing outlet used for a purpose other than trade in motor fuel. (*poste d'utilisateur*)

8.02. For the purposes of this Chapter,

(1) petroleum products are classified as follows:

(a) Class 1: petroleum distillates having a flash point below 37.8 °C as determined by D56, Standard Test Method for Flash Point by Tag Closed Tester, published by the American Society for Testing and Materials;

(b) Class 2: petroleum distillates having a flash point equal to or above 37.8 °C but below 60 °C as determined by D93, Standard Test Method for Flash-Point by Pensky-Martens Closed Cup Tester, published by the American Society for Testing and Materials; and

(c) Class 3: petroleum distillates having a flash point equal to or above 60 °C as determined by D93, Standard Test Method for Flash-Point by Pensky-Martens Closed Cup Tester, published by the American Society for Testing and Materials;

(2) fuel oil is of the following types:

(a) Nos. 0, 1 and 2: distillate fuel for home heating appliances;

(b) Nos. 4 and 5: a distillate, a residue or a blend of the two, used as fuel usually for burner installations without preheating devices; and

(c) No. 6: a distillate, a residue or a blend of the two, used as fuel for burner installations with a preheating device.

DIVISION II APPLICATION OF CODES AND STANDARDS

8.03. Subject to the regulatory exemptions under subparagraph 1 of the first paragraph of section 182 of the Building Act (R.S.Q., c. B-1.1), the codes, standards and provisions of this Chapter apply to all construction work on a petroleum equipment installation to which that Act applies, including its vicinity, carried out as of the date of coming into force of this Chapter.

DIVISION III DOCUMENTS INCORPORATED BY REFERENCE

8.04. The requirements of the documents incorporated by reference, in this Chapter, apply only to the extent that they refer to petroleum equipment.

8.05. Where the requirements incorporated by reference are inconsistent with those of a provision of this Chapter, the latter prevails.

8.06. The editions of the documents incorporated by reference in this Chapter are those indicated in the table below.

TABLE 1

Documents incorporated by reference

Agency	Designation	Title	Reference

8.07. Unless otherwise indicated in this Chapter, the documents incorporated by reference include the amendments, revisions or supplements in force on (*insert the date of coming into force of this Regulation*).

DIVISION IV **APPROVAL OF EQUIPMENT**

8.08. Petroleum equipment used in a petroleum equipment installation must, when required by a provision of this Chapter, be approved for the use for which it is intended.

The sale or leasing of such equipment that has not been approved is prohibited. The use of such equipment in a petroleum equipment installation that has not been approved, except for approval purposes, is also prohibited.

Petroleum equipment may, however, during an exhibition, a presentation or a demonstration, be used without prior approval provided that it is accompanied by a notice with the following warning in characters measuring at least 15 mm: “WARNING: this material has not been approved for sale or rental as required under Chapter VIII of the Construction Code.”.

8.09. Petroleum equipment certified by one of the following agencies is considered to be approved:

- (1) CSA International (CSA);
- (2) Underwriters’ Laboratories of Canada (ULC);
- (3) Intertek Testing Services NA LTD. (WH, cETL);
- (4) Underwriters Laboratories Incorporated (cUL);
- (5) American Petroleum Institute (API); and
- (6) any other certification agency accredited by the Standards Council of Canada as a certification agency for petroleum equipment having notified the Régie du bâtiment du Québec of its accreditation.

8.10. Despite section 8.08, approval is not required for each component of petroleum equipment if the petroleum equipment has received overall approval.

8.11. For the purposes of this Chapter, “certification” or “certified” means recognition by one of the agencies referred to in section 8.09, by means of a label affixed on certified equipment certifying that the equipment complies with the construction and testing requirements pub-

lished by the standards development organizations accredited by the Standards Council of Canada to develop petroleum equipment standards.

DIVISION V CERTIFICATE OF CONFORMITY

8.12. A contractor or owner-builder must, after construction work related to the installation, alteration or demolition of high-risk petroleum equipment or complete piping connected to it, provide the Régie du bâtiment du Québec with a certificate of conformity with this Chapter produced and signed by a recognized person under section 8.12 stating that

(1) the work has been carried out in accordance with sections, 8.21, 8.23, 8.24, 8.26 to 8.28, paragraphs 1 to 3 of section 8.29, sections 8.30, 8.31 and section 8.32, as regards only the clearance between the top of the tank and ground level, sections 8.42 to 8.44, paragraphs 1 and 2 of section 8.45, section 8.46, except paragraphs 1 to 3 of the second paragraph, sections 8.48 to 8.50, paragraph 1 of section 8.51, sections 8.53, 8.55 to 8.57, 8.60 to 8.65, except paragraph 4 of that section, paragraph 2 of section 8.66, sections 8.69, 8.72, 8.75, 8.77, 8.79, 8.80 and section 8.83, as regards only the clearance between piping and ground level, sections 8.85, 8.88 to 8.95, the third paragraph of section 8.96, sections 8.97, 8.98, 8.100, 8.102, 8.108, paragraph 1 of section 8.110, the third paragraph of section 8.112, sections 8.116, 8.124, 8.125, 8.127, 8.128, 8.138, 8.141 to 8.147, 8.149 to 8.151, 8.153, 8.154, 8.156, 8.159, 8.160, the first paragraph of section 8.162, the first and second paragraphs of section 8.166, sections 8.168, 8.170 to 8.172, 8.174, 8.175, the second paragraph of section 8.177, section 8.178, except paragraph 5 of that section, sections 8.179, 8.180, 8.182, 8.185, 8.186, 8.195, 8.197 to 8.199 and section 8.200 as regards the manual valve, sections 8.201, 8.203 to 8.205, 8.207 to 8.209, 8.211 to 8.213 and 8.215 to 8.217;

(2) the tests and inspections referred to in those sections for that work have been performed and their results are satisfactory; and

(3) the equipment covered by the certificate is free from leaks and presents no danger to public safety.

Otherwise, the recognized person must inform the contractor or owner-builder and the Régie, within 30 days, of any irregularities found and the reasons for refusing to produce the required certificate of conformity.

The certificate must also contain a description of the petroleum equipment inspected, its type, make, the petroleum product it is to contain, its model, capacity,

serial number, the standard under which it has been approved or manufactured, the address of the site where the construction work on the petroleum equipment was carried out, the nature of the work carried out, the licence number of the contractor or owner-builder who carried out the work, the date of signature, the name, address, telephone number and professional order membership number, temporary or accreditation permit, issued under the Act respecting petroleum products and equipment, of the recognized person who produced the certificate and the date of the beginning and end of the construction work. The certificate may be produced on the form provided for that purpose by the Régie.

If high-risk petroleum equipment has already been installed, altered or demolished, the contractor or owner-builder must take the necessary measures so that the recognized person may produce the certificate.

8.13. The following persons whose professional activities are related to the inspection, surveillance or design of petroleum equipment installations may be recognized by the Régie to produce and sign the certificate of conformity required under section 8.12:

(1) an engineer who is a member of the Ordre des ingénieurs du Québec;

(2) a holder of a temporary licence issued under the Engineers Act (R.S.Q., c. I-9) and

(3) a professional technologist holding a license issued by the Ordre des technologues professionnels du Québec.

Those persons must not be in a situation of conflict of interest, such as

(1) performing work on petroleum equipment or decontamination work on sites polluted by petroleum products, or supervising such work, in the capacity of a contractor or employee; or

(2) having a direct or indirect interest in an enterprise that performs work on petroleum equipment, designs or manufactures petroleum equipment or engages in activities in the field of petroleum product sales, storage or transportation.

8.14. The person referred to in section 8.13 who applies for recognition must

(1) file an application with the Régie that contains the following:

(a) the person's name, home address, telephone number and membership number of the person's professional order or the person's temporary licence number; and

(b) the number of years of experience acquired in activities related to the fields referred to in section 8.13;

(2) pay the fees of \$500; and

(3) certify the accuracy of the information contained in the application.

8.15. The recognition of a person may be revoked by the Régie for the following reasons:

(1) the person no longer meets the conditions set out in section 8.13; or

(2) the person has been convicted of an offence under section 194 of the Building Act.

DIVISION VI GENERAL

8.16. Construction work carried out on a petroleum equipment installation must be carried out so as to ensure that the equipment provides, in normal conditions of use and when used as intended, satisfactory levels of performance while minimizing danger to the public.

8.17. A contractor or owner-builder must, during construction work,

(1) use construction procedures suitable for the work;

(2) use the materials, appliances, equipment or devices designed for that purpose; and

(3) take the necessary precautions to prevent a risk of explosion, fire, spillage or other accidents of that nature.

DIVISION VII SPECIAL PROVISIONS APPLICABLE TO PETROLEUM PRODUCTS

8.18. Petroleum equipment must

(1) be installed in such a way as to safely contain the petroleum products to be handled and to resist wear, normal handling, fire and shocks;

(2) be sufficiently leakproof to prevent the risk of explosion, fire, spillage or any other accident of that nature when used during construction work;

(3) be installed in such a way as to prevent anyone not authorized by the person responsible for the equipment from gaining access to the equipment and be protected from coming into contact with any object that could cause an accident;

(4) be installed and have the necessary protection devices to ensure the safety of the persons who have access to the equipment or who are supplied from it;

(5) be designed, erected, installed or placed so that maintenance, repair or demolition work may be carried out; and

(6) be designed for the use for which it is intended and to resist to the conditions of use to which it is submitted.

8.19. Petroleum equipment used to store a Class 1 petroleum product may not be installed in a heated room unless the room is heated by means of an appliance that has no ignition source.

8.20. Petroleum equipment used to store a Class 1 or Class 2 petroleum product may not be installed in a room housing an electrical appliance or a pump.

8.21. Subject to the provisions of this Chapter, construction work carried out on an aboveground tank used to store petroleum products inside a building must be carried out in compliance with the requirements of section 4.3. of the National Fire Code of Canada, published by the Canadian Commission on Building and Fire Codes of the National Research Council of Canada, and any construction work carried out on aboveground piping and other petroleum equipment connected to such a tank and situated inside a building must be carried out in compliance with the requirements of Part 4 of that Code.

The installation inside a building of petroleum equipment used to store and supply a generator engine or a heating oil system referred to in CSA Standard B139 Installation Code for Oil Burning Equipment, published by the Canadian Standards Association, must meet the requirements of that standard.

8.22. The erection or installation of an underground or aboveground storage tank, a petroleum products distributor and a pump or piping containing such products is prohibited less than 3 m from a vertical plane touching the closest outside wall of a subway works.

8.23. A contractor or owner-builder may not install an underground tank unless the underground tank has been approved under one of the following standards:

(1) ULC-S603 Steel Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada;

(2) ULC-S615 Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada; or

(3) ULC/ORD-C58.10 Jacketed Steel Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada.

The installation must also be carried out in compliance with the standard under which the tank has been approved.

8.24. A contractor or owner-builder may not install an aboveground tank unless the aboveground tank has been approved under one of the following standards:

(1) ULC-S601 Shop Fabricated Steel Aboveground Horizontal Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada;

(2) CAN/ULC-S602 Aboveground Steel Tanks for the Storage of Combustible Liquids Intended to be used as Heating and/or Generator Fuels, published by Underwriters' Laboratories of Canada;

(3) ULC-S630 Shop Fabricated Steel Aboveground Vertical Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada;

(4) ULC-S643 Shop Fabricated Steel Aboveground Utility Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada;

(5) ULC-S653 Aboveground Steel Contained Tank Assemblies for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada;

(6) ULC-S655 Aboveground Protected Tank Assemblies for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada;

(7) ULC/ORD-C142.5 Concrete Encased Steel Aboveground Tanks Assemblies for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada;

(8) API-650 Welded Steel Tanks for Oil Storage, published by the American Petroleum Institute; or

(9) ULC/ORD-C142.18 Rectangular Steel Aboveground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada.

8.25. A contractor or owner-builder may install steel piping only if it meets the manufacturing requirements of one of the following standards:

(1) API-5L Line Pipe published by the American Petroleum Institute;

(2) ASTM-A53/A53M Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless, published by the American Society for Testing and Materials; or

(3) CSA-Z245.1 Steel Pipe, published by the Canadian Standards Association.

In addition, if service pressure exceeds 875 kPa, piping and fittings must meet the requirements of ASME Standard B31.3 Process Piping, published by the American Society of Mechanical Engineers.

8.26. A contractor or owner-builder may install copper piping only for fuel oil to supply a heating appliance, diesel fuel or biodiesel fuel to supply a generator engine. In addition, the piping must meet the requirements of CSA Standard B140.0 Oil Burning Equipment: General Requirements, published by the Canadian Standards Association.

8.27. A contractor or owner-builder may install non-metallic piping only if it meets the requirements of ULC/ORD Standard C971 Nonmetallic Underground Piping for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada. The piping must be installed so that there are no joints in the ground.

8.28. A contractor or owner-builder may install double-walled piping only if it meets the requirements of

(1) section 8.25, if it is steel;

(2) section 8.26, if it is copper; or

(3) section 8.27, if it is nonmetallic.

Such piping must be installed inside other piping that meets the requirements of section 8.25, 8.26 or 8.27, as the case may be.

It must also have an automatic leak detection system with a visual and audible alarm that meets the requirements of ULC/ORD Standard C107.12 Line Leak Detection Devices for Flammable Liquid Piping or ULC/ORD Standard C58.14 Non-Volumetric Leak Detection Devices for Underground Flammable Liquid Storage Tanks, published by Underwriters' Laboratories of Canada.

DIVISION VIII
SPECIAL PROVISIONS APPLYING TO HIGH-RISK
PETROLEUM EQUIPMENT

§1. Underground tanks

8.29. An underground tank must, to be installed,

(1) have a double wall and a capacity of more than 110,000 L;

(2) have, in its interstitial space, an automatic leak detection system with a visual and audible alarm manufactured under the requirements of ULC/ORD Standard C58.12 Leak Detection Devices (Volumetric Type) for Underground Flammable Liquid Storage Tanks or ULC/ORD Standard C58.14 Non-Volumetric Leak Detection Devices for Underground Flammable Liquid Storage Tanks, published by Underwriters' Laboratories of Canada;

(3) contain, in its interstitial space, where applicable, brine composed exclusively of calcium chloride with or without potassium chloride or sodium chloride where the respective concentration does not exceed 42%, 3% and 2%; and

(4) have any damage repaired, before the tank is backfilled, according to the manufacturer's specifications.

8.30. An underground tank must be installed

(1) at least 1 m from the foundations of any building;

(2) at least 1 m from any other tank;

(3) at least 1 m from the property line;

(4) at least 750 mm from the inner wall of the excavation; and

(5) in such manner that the loads carried by the foundations or the supports of a building cannot be transmitted to the tank; in addition, the soil must not be removed from the footing down to the bed of the excavation, in a 45° slope.

8.31. An underground tank likely to be subjected to overhead vehicular traffic must be sited

(1) at a depth not less than 1 m below ground level, be covered with not less than 900 mm of a backfill material referred to in section 8.33 and be covered with not less than 100 mm of bituminous concrete; or

(2) at a depth of not less than 450 mm, be covered with at least 300 mm of a backfill material referred to in section 8.33 and be covered with a reinforced concrete slab not less than 150 mm thick; the slab must also extend at least 300 mm horizontally beyond the perimeter of the tank.

8.32. An underground tank not to be subjected to overhead vehicular traffic must be sited

(1) at a depth of not less than 600 mm below ground level and be covered with a backfill material referred to in section 8.33; or

(2) at a depth of not less than 400 mm, be covered with a backfill material referred to in section 8.33 and be covered with a reinforced concrete slab at least 100 mm thick.

8.33. An underground tank must be installed on a backfill foundation at least 300 mm thick, that exceeds the tank's perimeter by at least 300 mm and is composed of one of the following materials:

(1) in the case of a fibreglass tank, pea gravel, rounded pea gravel between 3 and 20 mm or crushed stone at least 3 mm and not more than 13 mm; in addition, each material used must be clean and without dust, sand, debris, organic material, ice or snow so that not more than 3 % of its weight passes through a 2.5 mm sieve;

(2) in the case of a steel tank, clean or natural sand free of stones compacted to at least 90% of the optimal density of the modified proctor determined according to CAN/BNQ Standard 2501-255, Soils - Determination of the Water-Density Relation - Modified Effort Compaction Test (2700 kN.m/m³), published by the Bureau de normalisation du Québec, and be without stone, debris, organic material, ice or snow; or

(3) in the case of a jacketed steel underground tank, clean or natural sand free of stones compacted to at least 90% of the optimal density of the modified proctor determined according to CAN/BNQ Standard 2501-255, Soils - Determination of the Water-Density Relation - Modified Effort Compaction Test (2700 kN.m/m³), published by the Bureau de normalisation du Québec, and be without stone, debris, organic material, ice or snow, or pea gravel or rounded pea gravel between 3 and 20 mm.

The tank must be backfilled, as applicable, with the materials described in subparagraphs 1 to 3 of the first paragraph and be covered with a finishing grade layer not more than 300 mm thick.

8.34. An underground tank must be lowered into an excavation by the use of lifting lugs and hooks designed for that purpose or spreader bars, if required by the manufacturer's instructions; the use of chains or slings around the tank is prohibited.

8.35. After an underground tank has been set in the excavation, it must undergo the leak tests listed below that are to be conducted in compliance with the following requirements:

(1) for the inner wall of a tank,

(a) all the tank's caps must be removed and steel caps must be installed, after a joint compound or tape has been applied that meets the requirements of section 8.69;

(b) a safety valve set to a pressure of not more than 40 kPa capable of discharging the flow from the pressure source must be installed on a tank opening and its operation inspected before each test;

(c) the pressure inside the tank and in its interstitial space must be measured simultaneously using a pressure gauge calibrated in units of not more than 1 kPa;

(d) a pressure of at least 30 kPa and not more than 35 kPa must be created inside the tank; and

(e) the pressure in the interstitial space must remain stable;

(2) for the outer wall of a tank,

(a) the pressure inside the tank and in its interstitial space must be measured simultaneously using a pressure gauge calibrated in units of not more than 1 kPa;

(b) the pressure source must come from the inside part of the tank and be transferred into the interstitial space until it reaches a pressure of at least 30 kPa and not more than 35 kPa; a tank manufactured under ULC/ORD Standard C58.10 Jacketed Steel Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada, may be pressurized according to the manufacturer's instructions;

(c) it must be tested using leak detection fluid; and

(d) the interstitial space of a fibreglass tank must be inspected according to the manufacturer's recommendations.

During the tests, once the temperature has been stabilized and the pressure source removed, the pressure created must be maintained for at least one hour.

The pressure created in the interstitial space of the tank must be released before the pressure of the inner wall.

During each test period, the necessary inspections must be made to ensure the tests are properly conducted and to prevent accidents.

8.36. In the case of a tank with compartments, each compartment must be tested separately in accordance with section 8.35, not simultaneously and only if the adjacent compartment is not under pressure.

8.37. If the tank has already contained a petroleum product or other flammable product, the leak tests required by section 8.35 must be conducted using nitrogen.

8.38. The tests required by section 8.35 need not be conducted if the contractor or owner-builder

(1) ascertains that depressurization of at least 42 kPa created by the manufacturer in the interstitial space of the tank is maintained after it has been placed in the excavation; or

(2) has conducted a vacuum test on the interstitial space at a pressure of at least 42 kPa for at least one hour, if such a test is authorized by the manufacturer.

8.39. When leakage is detected during the leak tests, the tank must be repaired and subjected to a new test or be replaced.

8.40. A contractor or owner-builder may not use a petroleum product to ballast a tank unless the tank has a fill pipe and a vent line and all other openings have been plugged.

8.41. If the water table is reached during excavation work to install an underground tank, the contractor or owner-builder must comply with the following requirements:

(1) the up-lift stress of the tank must be calculated and a copy of the calculation must accompany the analysis documents and be sent to the owner to be filed in the petroleum equipment installation register that the owner must make available to the Régie in accordance with Chapter VI of the Safety Code made under the Building Act;

(2) the calculation must be based on the highest estimated water-level elevation;

(3) if the calculation indicates that the up-lift stress is such that an empty tank could be displaced, the tank must be anchored by anchor straps attached to a reinforced concrete slab or to anchor weights under the tank, by ground anchors or by use of a reinforced concrete slab above the tank;

(4) the size of the slab or anchors must be designed on the basis of the up-lift stress to which the empty tank will be submitted and in a manner to prevent it from lifting;

(5) the tank must be separated from a concrete slab or anchor weight by a layer at least 300 mm thick of a backfill material referred to in section 8.33;

(6) every anchor strap or ground anchor must be electrically insulated from the tank, be installed in such a manner that it does not damage the tank's protective coating, and be tightened by hand in the case of a strap; and

(7) the strength of the anchor straps and ground anchors must be determined on the basis of the factors mentioned in paragraph 4.

8.42. A contractor or owner-builder may not carry out construction work on a steel underground tank unless it is protected against corrosion using a method in either of the following documents:

(1) CAN/ULC Standard S603.1 External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada; or

(2) RP0619 Standard 2002 Control of External Corrosion on Underground or Submerged Metallic Piping Systems or RP0285 Standard 2002 Corrosion Control of Underground Storage Tank System by Cathodic Protection, published by NACE International, if the petroleum equipment installation is protected by an induced current system.

Despite the foregoing, a tank that meets the requirements of ULC/ORD Standard C58.10 Jacketed Steel Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada, need not be protected against corrosion.

8.43. Every excavation in which a tank is installed must have at least one observation well.

The observation well must consist of a perforated pipe at least 150 mm in diameter installed vertically, extending down 900 mm below the bottom of the tank,

and be accessible from the ground. The pipe must also be enclosed inside a permeable lining if it is buried in sand.

8.44. A contractor or owner-builder may not install

(1) a steel underground tank that has been removed from the ground, unless it has been approved in accordance with the requirements of the ULC-S603(A) Technical Supplement Document, Refurbishing of Steel Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada; or

(2) a fibreglass underground tank that has been removed from the ground, unless it has been approved in accordance with the requirements of the ULC-S615(A) Technical Supplement Document, Refurbishing of Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada.

8.45. If construction work consists in removing petroleum equipment from the ground, the contractor or owner-builder must, as the case may be,

(1) empty all petroleum product from the tank, piping and motor fuel dispensers, before their removal;

(2) remove the tank and piping from the ground and from the site along with the motor fuel dispenser connected to it, after purging the tank of all vapours until the flammable vapour concentration is less than 20 % of the lower explosive limit; or

(3) destroy the tank as provided by section 8.68 or have it approved as provided by section 8.44, in which case it must be purged of any vapour and its openings must be hermetically sealed other than a ventilation opening of at least 60 mm in diameter.

8.46. A contractor or owner-builder may not carry out alteration work to an underground tank that may be abandoned on site, unless the contractor or owner-builder has obtained the certificate of a person recognized under section 8.10, stating that

(1) removing the tank would jeopardize the integrity of the building's structure or of a part that is essential for the intended use of the building; or

(2) the machinery required for the removal of the tank cannot be taken onto the site.

The contractor or owner-builder must then

(1) remove all sludge from the tank so as to prevent any explosion and dispose of it in a tank or other closed container compatible with petroleum products;

(2) remove the piping from the ground;

(3) purge the tank of all vapours until the concentration is less than 10% of the lower explosive limit; and

(4) fill the tank with inert material such as sand, gravel or concrete and plug the openings.

§2. Aboveground tanks

8.47. An aboveground tank, a loading or unloading facility and metal piping installed on a tank must be protected against external corrosion by the use of paint, wrapping or coating.

8.48. Siting of an aboveground tank must conform to the requirements of the following Tables 2 and 3:

TABLE 2
SITING OF ABOVEGROUND TANKS

Tank capacity (Litres)	PRODUCT	Minimum distance, in metres, measured horizontally, between any point on outside tank shell and		
		Dike centre line when required by sections 8.60 and 8.61	Closest building*	Property line
2,000 to 5,000	Class 1	D	D	D
	Class 2 and Class 3	0.5	0.5	1.5
5,001 to 47,000	Class 1	D	D	D
	Class 2 and Class 3**	1.5	1.5	1.5
	Class 3 - flash point above 93.3 °C	0.5	0.5	1.5
47,001 to 200,000*	Class 1	D	D	D
	Class 2 and Class 3**	D	D	D
	Class 3 - flash point above 93.3 °C	1	1	D

Tank capacity (Litres)	PRODUCT	Minimum distance, in metres, measured horizontally, between any point on outside tank shell and		
		Dike centre line when required by sections 8.60 and 8.61	Closest building*	Property line
200,001 to 400,000	All	D	5	5
400,001 to 2,000,000	All	D	9	9
2,000,001 to 4,000,000	All	D	12	12
More than 4,000,000	All	D	15	15

D: The greater distance between 3 m and one-half tank height. Tank height is measured from the bottom of the diked area.

* For tanks installed inside a building, distance is measured from the tank shell to the walls and ceiling of the building housing them.

** Class 3 products with a flash point not above 93.3 °C.

TABLE 3
DISTANCES BETWEEN TWO ABOVEGROUND TANKS

Tank capacity	Minimum free distance
Tanks where none exceeds 230,000 L	1 m
Tanks of various capacities, one only exceeding 230,000 L	One-half of smallest tank diameter, but never less than 1 m
Tanks of equal capacity, each exceeding 230,000 L	One-half diameter of one tank
Tanks of various capacities, each exceeding 230,000 L	One-half diameter of smallest tank

8.49. Despite section 8.48, an aboveground tank used to store motor fuel in a motor fuel dispensing outlet situated in a designated location must be installed so that the tank and the end of the motor fuel dispensing hose are at all times at least 12 m from any building or property line.

8.50. An aboveground tank used to store and sell motor fuel that is installed in a designated location within the limits of a municipality must be protected by a fence that meets the requirements of section 8.217.

8.51. A contractor or owner-builder may not install

(1) an aboveground vertical tank, unless it rests on concrete or masonry foundations or on a bed of crushed stone, gravel, sand or a combination of those materials; or

(2) an aboveground horizontal tank, unless it sits above ground level on a support of concrete, masonry or steel coated with an anti-corrosive material.

8.52. A steel support on which an aboveground tank is installed must have a fire-resistance rating longer than 2 hours within the meaning of Chapter I, except for a steel stand if the lowest point of the tank supported by it is not more than 300 mm above ground.

8.53. A contractor or owner-builder may not install a vertical tank directly on the ground, unless the slope allows water to flow away from the base of the tank.

8.54. In areas subject to earthquake forces, a tank used to store petroleum products, its supports and connections must be designed to resist such forces in compliance with

(1) Part 4 of the Code referred to in Chapter I, as amended by Division III of that Chapter; and

(2) Appendix A of ULC Standard S630 Shop Fabricated Steel Aboveground Vertical Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada.

8.55. A contractor or owner-builder may not install an aboveground tank on a floodplain referred to in the Protection Policy for Lakeshores, Riverbanks, Littoral Zones and Floodplains, adopted by Order in Council 468-2005 dated 18 May 2005, unless it is anchored to prevent floating.

8.56. A contractor or owner-builder may not install an aboveground tank, unless it is protected from vehicle impact.

8.57. A contractor or owner-builder may not install an aboveground tank that has piping or a fitting connected to it at a point below the highest level to which the petroleum product it contains may rise, unless the piping or fitting has a shut-off valve that meets the requirements of one of the standards referred to in section 8.115 and is located as near as is practicable to the shell of the tank.

8.58. A contractor or owner-builder may not install an aboveground tank used to store petroleum products, unless openings for gauging tanks have a vapour tight and lockable cover.

8.59. A contractor or owner-builder may not install an aboveground tank with a heating appliance, except if it has thermometers and thermostats so that the temperature of the product it contains is maintained at least 10 °C below the product's flash point.

8.60. A contractor or owner-builder may not install an aboveground tank used to store petroleum products, unless it has a dike to form a diked area around the aboveground tank or tank farm holding 5,000 L or more.

To that end, the diked area that protects

(1) one tank only must have a capacity sufficient to contain a volume of liquid at least 10% greater than the volume of the tank;

(2) several tanks must have a capacity sufficient to contain a volume of liquid at least equal to the volume of the greater of

(a) the capacity of the largest tank plus 10% of the aggregate capacity of all the other tanks; and

(b) the capacity of the largest tank plus 10%.

In calculating the capacity of the diked area, the volume of the part of the tanks situated below the top of the dike must be included.

8.61. The dike referred to in section 8.60 is not required for

(1) a tank with a capacity of 50,000 L or less that meets the following requirements:

(a) it has an overfill protection device that meets the requirements of ULC/ORD Standard C58.15 Overfill Protection Devices for Flammable Liquid Storage Tanks, published by Underwriters' Laboratories of Canada, and a containment device with a capacity of at least 15 L that meets the requirements of ULC/ORD Standard C142.19 Spill Containment Devices for Aboveground Flammable and Combustible Liquid Storage Tanks, published by Underwriters' Laboratories of Canada; and

(b) it meets one of the standards referred to in paragraphs 5 to 7 of section 8.24 or, in the case of a double-walled tank, one of the standards referred to in paragraphs 1 and 3 of that section; or

(2) a tank used to store Type No. 4, No. 5 or No. 6 fuel oil if it has a system capable in the event of leakage of containing or directing the product to a safe location.

8.62. A contractor or owner-builder may not construct a dike around an aboveground tank, unless it meets the following requirements:

(1) the dike must be of earthwork, steel, concrete or bonded masonry, be liquid-tight and be capable of withstanding a full hydrostatic head;

(2) the slope of the walls of the dike must be consistent with the angle of repose of the material used;

(3) the dike must not be higher than 1.8 m from the bottom of the diked area;

(4) the minimum distance between the dike centre line and the outer tank shell must meet the requirements of Table 2 of section 8.48; and

(5) the inner wall and the bottom of a diked area must be impermeable to petroleum products and, to that end, the impermeability must be ensured by

(a) a liner protected against loads and fire complying with ULC/ORD Standard C58.9 Secondary Containment Liners for Underground and Aboveground Flammable and Combustible Liquids Tanks, published by Underwriters' Laboratories of Canada;

(b) a compacted layer of homogeneous soil at least 3 m thick where the water permeability coefficient of the soil is equal to or less than 10^{-6} cm/s; and

(c) a construction consisting of concrete or other incombustible material, provided that the diked area is approved by an engineer who is a member of the Ordre des ingénieurs du Québec.

8.63. In the case of subparagraph *b* of paragraph 5 of section 8.62, the contractor or owner-builder must obtain a laboratory report attesting to the required permeability and thickness of the soil. A copy of the report must be sent to the owner of the tank to be filed in the register referred to in paragraph 1 of section 8.41.

8.64. A contractor or owner-builder may not install a tank used to store a Class 1 petroleum product, except if access to the roof of the tank and to the shut-off valve controls is situated higher than the height of the dike, the height of the dike exceeds 3.5 m and the distance between the tank and the top inside edge of the dike wall is lower than the height of the dike.

8.65. A contractor or owner-builder may not construct a diked area for an aboveground tank, unless

(1) the diked area has a drainage system such as a sump or a channel located at its lowest point and has a closed valve to drain the water;

(2) the control for the drainage system valve is accessible at all times;

(3) the bottom of the diked area has a uniform slope of at least 1% between any tank and the lowest point; and

(4) the diked area complies with paragraph *f* of section 4.3.2.3.2 of NFP Standard A30 Flammable and Combustible Liquids Code, published by the National Fire Protection Association, if it contains more than one tank.

8.66. If construction work consists in removing aboveground petroleum equipment, the contractor or owner-builder must

(1) drain petroleum products from tanks, piping, motor fuel dispensers and loading and unloading equipment before they are removed; and

(2) remove all tanks, piping, motor fuel dispensers, loading and unloading equipment and any leakage and spillage protection work from the site.

8.67. A contractor or owner-builder may not install an aboveground tank or aboveground piping that has already been used, unless the following requirements are met:

(1) the tank must be manufactured and approved in accordance with the provisions of section 8.24, and the plates identifying the manufacturer and the certification agency referred to in section 8.09 must be affixed to the tank and be legible;

(2) the tank must be cleaned, inspected and subjected to pneumatic leak testing with inert or hydrostatic gas in compliance with the standards prescribed in section 8.24, and be protected against external corrosion; and

(3) the piping must be cleaned, inspected and protected against external corrosion.

§3. Demolition work

8.68. A contractor or owner-builder may not demolish a tank unless the tank has been

(1) cleaned of any petroleum product residue; and

(2) purged of any vapour while ensuring that, during the demolition operation, the concentration of vapours is less than 10% of the lower explosive limit at all times.

The work must be carried out in such a manner as to render the tank unusable and to prevent any accumulation of flammable vapours. The work must in addition be carried out in a safe location where the public has no access, using the equipment necessary to recover all petroleum product residue; that location must also comply with the planning by-laws in force in the territory of the municipality where the work is carried out.

A contractor or owner-builder must in addition place petroleum product residue in a tank or other closed container compatible with petroleum products. The residue and materials from the dismantling must be shipped to a site authorized under the Environment Quality Act (R.S.Q., c. Q-2).

§4. Piping

8.69. The threaded joint in piping used to contain petroleum products must be made using a joint compound or polytetrafluoroethylene tape that meets the requirements of CAN/ULC Standard S642 Compounds and Tapes for Threaded Pipe Joints, published by Underwriters' Laboratories of Canada.

8.70. Piping used to contain petroleum products must be welded in compliance with API Standard 1104 Welding of Pipelines and Related Facilities, published by the American Petroleum Institute.

8.71. Except in the case of piping supplying a marina bulk plant, a contractor or owner-builder may install a petroleum equipment installation only if it has separate pipe lines for

- (1) unleaded regular or premium gasoline included in Class 1 petroleum products;
- (2) Class 1 petroleum products other than gasoline;
- (3) Class 2 petroleum products; and
- (4) Class 3 petroleum products.

8.72. A contractor or owner-builder may not install metallic piping on a petroleum equipment installation, including its couplings, flanges and bolts, unless it is protected against external corrosion.

8.73. A contractor or owner-builder may not install the transfer pump of a petroleum equipment installation able to create a pressure greater than that which the downstream piping components can withstand, unless the pump has a safety valve and a bypass.

8.74. A contractor or owner-builder may not use in construction work aboveground piping, valves, connections or any other material, unless they are suitable for the maximum pressure and temperature for proper operation and for the chemical properties of the liquid the piping is to contain.

The contractor or owner-builder also may not use material that cannot withstand internal stress or mechanical damage related to its use or a combustible or low-melting material subject to failure even in a light fire.

8.75. The underground piping of a petroleum equipment installation that is to pass through concrete must be installed in a sleeve to allow for expansion.

8.76. Aboveground piping that is to contain petroleum products must, to be used, have been designed to make provision for thermal expansion and contraction related to its use.

8.77. Piping that is to contain petroleum products must be installed to be accessible where it enters a building, and have inside and outside control valves.

8.78. Every underground part of piping that is to contain petroleum products must, to be used, have a double wall that meets the requirements of section 8.28 and be connected at its lowest point with a liquid-tight collector well.

The collector well must, in addition, have an automatic leak detection system with a visual and audible alarm that meets the requirements of section 8.28.

8.79. Construction work carried out on underground piping must, in addition to meeting the requirements of this Chapter, be carried out according to the manufacturer's instructions.

8.80. A joint at the point of connection of underground piping with a tank must be a swing joint or have an underground flexible connection, unless the piping is vertical at its point of connection to the tank over its entire length.

In addition, a swing joint or flexible connection must be connected at the base of each dispenser, at the connection of a submersible pump and the vertical portion of the vent.

Despite the foregoing, a swing joint is not required if the piping is flexible.

8.81. Piping connected to an underground tank that is to supply it must be connected at the top of the tank. The piping must also be free of pockets or traps allowing liquid to accumulate, and have a minimum 1% slope towards the tank.

8.82. Piping must be backfilled

(1) with clean or natural sand free of stones compacted mechanically on site in the case of steel piping;

(2) with crushed stone or pea gravel in the case of fibreglass piping; or

(3) according to the manufacturer's instructions in the case of flexible piping.

8.83. Underground piping must be backfilled with one of the materials referred to in section 8.82 in such manner that

(1) the piping is bedded on at least 150 mm of backfill;

(2) there is at least 150 mm of backfill measured horizontally between the piping and the excavation wall;

(3) the backfill between each pipe is at least twice as thick as the nominal diameter of the largest pipe; and

(4) the backfill above the piping is at least 450 mm deep including the finishing grade layer.

8.84. Underground piping must, before being connected to a tank, be subjected to a leak test conducted in compliance with the following requirements:

(1) for the inner wall,

(a) the ends of the pipes must be hermetically plugged;

(b) the pressure created inside the piping must be measured using a pressure gauge calibrated in units of not more than 10 kPa;

(c) air or nitrogen hydrostatic pressure of not less than 350 kPa and not more than 700 kPa must be applied; despite the foregoing, the suction piping that is to contain fuel oil or motor fuel to supply a generator engine and that is referred to in CSA Standard B139 Installation Code for Oil Burning Equipment, published by the Canadian Standards Association, may be vacuum tested under at least 68 kPa;

(d) each connection or accessible part of the piping must be tested before being backfilled, using leak detection fluid;

(e) once the temperature has been stabilized and the pressure source removed, the pressure created must be maintained for at least one hour; and

(f) if the piping is designed to be exclusively used as suction piping, it must be leak tested according to the manufacturer's instructions; and

(2) for the outer wall of double-walled piping, the leak test must be conducted according to the manufacturer's instructions.

8.85. Every connection to underground piping that has not been leak tested under section 8.84 must, after being connected to the tank, be subjected to an air leak test or nitrogen leak test conducted in compliance with the following requirements:

(1) a safety valve of not more than 40 kPa capable of discharging the flow from the pressure source must be installed and inspected before each test;

(2) the pressure created inside the tank and the piping must be measured using a pressure gauge calibrated in units of not more than 1 kPa;

(3) a pressure of not less than 30 kPa and not more than 35 kPa must be applied over the entire petroleum equipment installation being tested;

(4) all the connections between the tank and the piping must be leak tested with leak detection fluid while the entire installation is under pressure; and

(5) once the temperature has been stabilized and the pressure source removed, the pressure must be maintained for at least one hour.

8.86. Despite sections 8.84 and 8.85, air may not be used in a leak test for petroleum equipment that has already contained a petroleum product or that has not been purged of all petroleum product vapour.

8.87. If a leak test reveals leakage, all connections between the tank and the piping must be repaired or replaced and subjected to the tests referred to in sections 8.84 and 8.85.

8.88. Metal material that is to contain petroleum products and that is used during the installation, repair or alteration of underground piping, including galvanized steel piping, valves and underground metallic connections, must be new and protected against corrosion in compliance with Appendix A of CAN/ULC Standard S603.1 External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada.

Corrosion protection in compliance with that method is not required if the piping is used in a designated location for a period of less than two years.

8.89. Underground metallic piping installed during construction work must be installed with at least 2,000 kPa resistance screwed fittings or Schedule 40 welded fittings.

The use of tightened end joints or fully threaded joints for that purpose is prohibited.

8.90. A coupler used on underground piping must be a 2,000 kPa coupler designed for petroleum products.

8.91. A swing joint connected during construction work on threaded steel underground piping must be connected with two 90° elbows and a nipple.

For that purpose, the use of the following is prohibited:

- (1) a male-female elbow,
- (2) a close fully-threaded nipple, and
- (3) a 45° elbow.

8.92. Underground galvanized steel piping may not be welded during construction work.

8.93. Non-metallic piping used during construction work must be underground.

8.94. A swing joint connected during construction work on rigid non-metallic underground piping must have a 90° elbow that can be connected to the petroleum product extraction system, a 1.5 metre-long non-metallic nipple connected to another 90° elbow in turn connected to non-metallic piping at least 1.5 m in length, installed respecting that sequence.

That type of swing joint may not be connected at the base of a dispenser.

8.95. The tank of a petroleum equipment installation installed during construction work must have a vent.

The vent may not be connected to more than one tank unless it is of a diameter that allows the vapours from the various tanks to be purged without causing the allowable stress for each tank to be exceeded.

The vent on a tank that is to contain a Class 1 petroleum product may not be connected to the vent of a tank that is to contain a Class 2 or Class 3 petroleum product.

8.96. The vent referred to in section 8.95 must, in the case of a tank that is to contain a Class 1 or Class 2 petroleum product, have a weather-proof hood, and a flame arrester device in the case of a tank that is to contain a Class 1 petroleum product.

Such a device must not create additional resistance to the flow of gases.

The vent must also be connected to the top of the tank by means of piping with a minimum 1% slope towards the tank and the aboveground portion of the vent must be protected from vehicle impact.

8.97. The vent referred to in section 8.95 must be located outside a building and positioned in such a manner that flammable vapours cannot be drawn into the building.

The end must be

- (1) higher than the end of the fill pipe;
- (2) at a distance of not less than 3.5 m, in the case of a tank containing a Class 1 petroleum product, or 2 m in the case of a tank containing other petroleum products;
- (3) at a distance of not less than 1.5 m from any building opening in the case of a tank containing a Class 1 petroleum product, or not less than 600 mm in the case of a tank containing other petroleum products; and
- (4) at a distance of not less than 7.5 m from any dispenser, in the case of an underground tank containing gasoline.

8.98. Vent piping for an underground tank must have a cross-sectional area sufficient to allow filling or withdrawal at the maximum rate without causing the allowable stress for the tank to be exceeded.

8.99. Vent piping for an underground tank must be installed so that it is free from any device likely to cause back pressure exceeding the allowable stress for the tank.

In the case of an underground tank to be used to store a Class 2 or Class 3 petroleum product, vent piping may be fitted with return bends, coarse screens or other devices designed to minimize the entry of material.

8.100. The minimum diameter of the vent referred to in section 8.99 must respect the values in the following Table 4 if the vent piping does not have more than 7 elbows; in other cases, the diameter must exceed the values so that the allowable stress for the tank is not exceeded.

TABLE 4
VENT DIAMETERS (mm)

Maximum flow rate (L/min)	Pipe length		
	15 m	30 m	60 m
380	32	32	32
760	32	32	32
1,140	32	32	38
1,520	32	38	50
1,900	32	38	50
2,280	38	50	50
2,660	50	50	50
3,040	50	50	75
3,420	50	50	75
3,800	50	50	75

N. B.: Vent size is based on the highest filling or emptying flow rate.

8.101. The vent referred to in section 8.99 may not extend more than 25 mm inside an underground tank, unless it has an alarm.

8.102. A contractor or owner-builder may not install an aboveground tank unless it has safety venting that meets API Standard 2000 Venting Atmospheric and Low Pressure Storage Tanks: Nonrefrigerated and Refrigerated, published by the American Petroleum Institute or one of the construction standards referred to in section 8.24.

8.103. A contractor or owner-builder may not install, in a petroleum equipment installation, aboveground piping that crosses a road, public road or public service installation, unless the piping meets the requirements of CAN/CSA Standard Z662 Oil and Gas Pipeline Systems, published by the Canadian Standards Association.

8.104. An aboveground piping system installed on a petroleum equipment installation must have bypasses or safety valves capable of preventing over-pressurization.

8.105. Aboveground piping used during construction work must have been designed and installed so that petroleum product velocity in the piping does not exceed 2.5 m/s, unless the piping is directly connected to a marine wharf.

In addition, insulation wrapping on aboveground piping must be non-combustible and, if inside a building, must meet the requirements of Chapter I.

8.106. Aboveground piping that is to contain petroleum products, the piping valves and fill pipe of a petroleum equipment installation installed during construc-

tion work must display permanent identification of contents in compliance with the document entitled "Colour-Symbol System to Mark Equipment and Vehicles for Product Identification", published by the Canadian Petroleum Products Institute.

In addition, the piping may not be red in colour.

8.107. Flanged joints for aboveground piping must be provided in welded systems at intervals that will facilitate dismantling and avoid subsequent in-place cutting and welding operations.

Flanged joints must be made with forged or cast steel flanges designed, manufactured and installed in compliance with ASME Standard B16.5 Pipe Flanges and Flanged Fittings, published by the American Society of Mechanical Engineers; bronze flanges may be used on copper or brass piping not exceeding 50 mm in diameter.

8.108. Only welded, screwed or flanged connections may be installed on piping inside a tank dike.

8.109. Bolting materials for flanged connections installed on piping that is to contain petroleum products must be of alloy steel corresponding to Grade B-7 in ASTM Standard A193/A193M, Alloy-Steel and Stainless Steel Bolting Materials for High Temperature or High Pressure Service and Other Purpose Applications, published by the American Society for Testing and Materials.

Gaskets in flanged connections must be of a material resistant to the liquid contained in the piping and capable of withstanding temperatures of at least 650 °C without damage.

8.110. At the time of installation, aboveground piping must be subjected to a leak detection test conducted in compliance with the following requirements:

(1) a test pressure of not less than 350 kPa, or 1 1/2 times the maximum operating pressure that may be produced within the piping, whichever is greater, must be created within the piping;

(2) the piping system and its joints must be inspected with leak detection fluid;

(3) the pressure created in the piping must be measured using a pressure gauge calibrated in units of not more than 4 kPa for gauge pressure equal to or less than 700 kPa and in units not greater than 1% of the test pressure, if it exceeds 700 kPa and the piping system is designed for such pressures.

If test pressures exceed the design pressures for pumps or similar components in the piping system, the pumps or components need not be pressure tested.

8.111. Aboveground piping containing petroleum products and installed within a building must be as short and direct as practicable.

8.112. Aboveground piping must be installed in such manner as to reduce vibrations and stress to a minimum and not come directly into contact with the ground.

The use of expansion shields to suspend aboveground piping is prohibited in lightweight concrete or gypsum assemblies.

Aboveground piping must also be protected by barriers in areas subject to vehicle impact.

8.113. The installation of the following is prohibited:

(1) aboveground outdoor piping on walls unless the walls are of non-combustible construction;

(2) outdoor piping above windows;

(3) outdoor piping above roofs, except roofs that are non-combustible and impermeable to petroleum products with provision for the collection of spillage to prevent a fire; and

(4) piping containing petroleum products in service tunnels used for pedestrian traffic other than tunnels reserved for maintenance personnel.

8.114. Aboveground indoor piping containing petroleum products must be supported overhead or be located in a trench; it must not be installed under combustible flooring.

The trench referred to in the first paragraph must have trapped drains or positive ventilation to the outdoors preventing the accumulation of flammable vapours.

The aboveground piping must be located close to the ceiling or beams, or along walls not less than 1.8 m above the floor, subject to section 3.3.1.8 of the Code referred to in Chapter I, as amended by Division III of that Chapter.

8.115. A contractor or owner-builder may not install valves or safety valves in aboveground piping that is to carry petroleum products, unless they meet the manufacturing specifications in either of the following standards: ULC/ORD-C842 Guide for the Investigation of Valves for Flammable and Combustible Liquids or

ULC-S651 Emergency Valves for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada.

8.116. A shut-off valve must be installed on the aboveground piping of a petroleum equipment installation at the following locations:

(1) at connections of the piping to aboveground tanks;

(2) on supply piping where it enters buildings or any other works or place immediately accessible from the outside of the buildings or works;

(3) on branch lines from the main supply line;

(4) on supply lines at petroleum products dispensing locations;

(5) at connections of meters or air bleeder valves; and

(6) at connections of pumps.

8.117. Diaphragm valves must have no direct connections to aboveground piping between the liquid and air section.

8.118. Globe valves installed on aboveground piping must be arranged so that the packing is on the low pressure side.

8.119. Rising stem or other indicating-type valves must be used to determine whether the valves are open or shut.

8.120. Cast-iron meters installed on aboveground piping must have steel valves on each side.

8.121. Valves installed on aboveground piping must be identified in compliance with section 8.106.

8.122. Water bleed valves installed on aboveground tanks must be made of steel and protected from impact if the valves are outside the aboveground tanks.

8.123. Heating equipment for aboveground piping containing petroleum products that is installed on a petroleum equipment installation must be designed not to overheat or create an ignition source for the liquids being heated.

For that purpose, the heating equipment may consist of

(1) steam lines if

(a) the minimum steam temperature and pressure to make the liquid fluid are used;

(b) a pressure regulator is provided on the steam line with a relief valve on the downstream side of the regulator; and

(c) the steam lines and piping are insulated in compliance with the requirements of Chapter I;

(2) a set of electrical heating cables; and

(3) low-voltage alternating current passing through the piping provided that

(a) the heated sections of piping are isolated from the unheated sections by non-conductive material; and

(b) all piping and fittings are enclosed by insulating coverings that prevent accidental grounding of the heating equipment.

8.124. The intake end of a fill pipe or gauge pipe of an underground tank must be

(1) located outside a building, more than 1.5 m from any building opening and in a place free of any ignition source;

(2) located not less than 600 mm from any building opening in the case of a tank containing motor fuel as a Class 2 petroleum product and that supplies a generator engine or in the case of a fuel oil tank supplying heating equipment; and

(3) capable of filling a tank containing motor fuel on land not forming part of a public road within the meaning of the second paragraph of section 66 of the Municipal Powers Act (R.S.Q., c. C-47.1).

8.125. A remote intake end of a fill pipe referred to in section 8.124 from an underground tank must be located lower than other outlets from the tank, unless the tank

(1) is a tank with an overfill protection device that meets ULC/ORD Standard C58.15 Overfill Protection Devices for Flammable Liquid Storage Tanks, published by Underwriters' Laboratories of Canada, adapted so as to include in the tank the volume of petroleum product that could be contained in the fill pipe without exceeding the maximum filling level of the tank as specified in the Standard; or

(2) is a tank with a backflow device inside the piping connected to other openings.

8.126. A fill pipe installed on an underground tank must be connected to the top part of the tank.

8.127. A contractor or owner-builder may not install an underground tank that is to contain motor fuel, except a tank that is to supply a generator engine, unless the tank has an overfill protection device that meets the requirements of ULC/ORD Standard C58.15 Overfill Protection Devices for Flammable Liquid Storage Tanks and a spill containment device that meets the requirements of ULC/ORD Standard C58.19 Spill Containment Devices for Underground Flammable Liquid Storage Tanks, published by Underwriters' Laboratories of Canada.

8.128. The intake end of a fill pipe or gauge pipe installed on an underground tank must have a tight-fitting cap.

It must also be protected against vehicle impact by at least one barrier if the pipe extends above ground level.

If the intake end of a fill pipe or gauge pipe is below or at ground level, it must be protected by a box with a cover made of metal or concrete that prevents any transmission of surface loads to the tank.

8.129. A fill pipe installed on a tank that is to store motor fuel, except a fill pipe installed on a tank connected to a generator engine that is to use diesel fuel or biodiesel fuel, must extend to not more than 200 mm from the bottom of the tank and be fixed in such a way as to minimize vibration.

8.130. If a petroleum equipment installation is altered to replace an underground tank, steel piping that is not protected against corrosion and connected to the tank must be removed from the ground, unless it is subjected to a leak detection test that meets the requirements of the second paragraph indicating that it is liquid-tight and protected against corrosion in compliance with RP0169-2002 Control of External Corrosion on Underground or Submerged Metallic Piping Systems or RP0285-2002 Corrosion Control of Underground Storage Tank System by Cathodic Protection, published by NACE International.

The leak detection test must be conducted using a hydrostatic or vacuum method capable of detecting leaks of 1.2 L/h with a 95% probable success rate and a margin of error of no more than 5%, or using any other method capable of detecting leaks of 0.76 L/h, with the same probabilities, with the exception of pneumatic tests using gas, in the case of tanks except observation well surveillance systems. The methods must in addition meet the requirements of one of the following standards: EPA

530/UST-90/004 Standard Test Procedures for Evaluating Leak Detection Methods: Volumetric Tank Tightness Testing Methods, EPA 530/UST-90/007 Standard Test Procedures for Evaluating Leak Detection Methods: Statistical Inventory Reconciliation Methods, published by the Environmental Protection Agency.

§5. *Maintenance work*

8.131. Construction work carried out on piping for a petroleum equipment installation must be carried out only when it is not under pressure.

8.132. The piping for a petroleum equipment installation must be drained before being dismantled.

8.133. The ambient air must be tested with a flammable vapour indicator before cutting or welding work on a petroleum equipment installation to ensure that no explosive concentration is present.

Two portable extinguishers having a minimum rating of 20-B: C must also be available on the work site while the work is being carried out.

DIVISION IX PROVISIONS APPLICABLE TO MOTOR FUEL DISPENSING OUTLETS AND SERVICE CENTRES

§1. *General*

8.134. A sign must be posted indicating the operating instructions of a self-serve facility.

In the case of an unattended self-serve facility, a service station or a motor fuel dispensing outlet where an attendant dispenses motor fuel to a vehicle, a sign must be posted indicating the operating instructions of every pump island if the dispensing outlet has more than one pump island.

Every pump island must also have a sign at least 100 mm in height by 180 mm in width visible from the fuelling area and displaying

(1) the words: “DÉFENSE DE FUMER” and “ARRÊTEZ LE MOTEUR AVANT LE REMPLISSAGE” in letters at least 25 mm in height; or

(2) the pictograms as illustrated in Schedule I.

8.135. Dispensing outlets in an installation dispensing a petroleum product must be clearly legible and indicate the type of motor fuel dispensed.

8.136. The intake end of a fill pipe installed on a tank storing motor fuel must have a tight-fitting device that prevents opening by a person who is not authorized by the person responsible for the equipment.

8.137. The fuelling area of an installation dispensing motor fuel must be lighted to the intensity of at least 50 lx or 5 W/m² for incandescent lighting.

8.138. The total capacity of all underground tanks in a motor fuel dispensing outlet may not exceed 250,000 L.

8.139. Aboveground tanks that are to store motor fuel may be installed only for the supply of

(1) a vehicle in a designated location that is not within the limits of a municipality;

(2) an all-terrain vehicle, a snowmobile or any other vehicle of the same kind;

(3) a vehicle in a user outlet;

(4) an aircraft or a water craft; or

(5) a vehicle in a territory north of the 50th parallel of north latitude and east of the 63rd meridian, or north of the 53rd parallel of north latitude.

An outside aboveground tank in a motor fuel dispensing outlet must have a capacity of not more than 50,000 L and the aggregate capacity of all tanks in the outlet may not exceed 150,000 L.

8.140. A booth erected in a motor fuel dispensing outlet must be made of materials that do not sustain a flame and provide an unobstructed view from inside the booth at all times of the interior surroundings and of the fuelling areas in their entirety.

No combustion heating appliance may be located in a booth.

8.141. A contractor or owner-builder may not install a Class 1 or Class 2 petroleum product motor fuel dispenser unless it meets the requirements of CSA Standard B346 Power-Operated Dispensing Devices for Flammable Liquids, published by the Canadian Standards Association.

8.142. A motor fuel dispenser in a motor fuel dispensing outlet must be situated on an island at least 100 mm high, made of concrete or other non-combustible material or be protected from vehicle impact by barriers; that requirement does not apply to a dispenser fixed on an aboveground tank.

8.143. A contractor or owner-builder may not install a pump island, unless it has, for each dispenser, a dispenser sump that meets the requirements of ULC/ORD Standard C107.21 Under-Dispenser Sumps or ULC Standard S653 Aboveground Steel Contained Tank Assemblies for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada; that requirement does not apply to a pump island on a floating wharf.

8.144. The fuelling area in a motor fuel dispensing outlet must be impermeable to petroleum products over a surface extending at least 3 m in front and 1.5 m to the sides of each motor fuel dispenser measured from the centre of the dispenser. Despite the foregoing, that requirement does not apply to a fuelling area

- (1) for off-highway vehicles or farm equipment;
- (2) to be used for a single period of less than one year;
- (3) situated in a designated location; or
- (4) the tanks of which have a capacity lower than 2,500 L.

The impermeability referred to in the first paragraph may be obtained using a reinforced concrete apron or an asphalt layer treated to make it resistant and impermeable to petroleum products.

8.145. A dispenser installed or altered in a motor fuel dispensing outlet must comply with the clearances in the following Table 5:

TABLE 5
Dispenser clearances (m)

	Dispenser outlet	Unattended self-serve facility	Marina outlet	User outlet	Airport outlet
From a building except a booth	4.5 ⁽²⁾	6 ⁽³⁾	5	1 ⁽⁴⁾	15
From the property lines	4.5 ⁽²⁾	6 ⁽³⁾	4.5 ⁽²⁾	4.5 ⁽⁴⁾	15
From a stationary ignition source	6 ⁽¹⁾	6 ⁽¹⁾	8	7.5 ⁽⁴⁾	6 ⁽¹⁾
From a building opening other than a booth opening	—	—	—	4.5 ⁽⁴⁾	—
From a dock, wharf, pier or pontoon or approach thereto	—	—	5	—	5

⁽¹⁾ Applies only to a Class 1 petroleum product fuel dispenser.

⁽²⁾ If a petroleum product installation is altered, a dispenser installed before 1973 need not be relocated or may be replaced by another dispenser at the same place if it has the same number of dispensing hoses and dispenses the same number of products. In the case of a marina outlet, the shore is not to be considered a property line.

⁽³⁾ If a petroleum product installation is altered, a dispenser installed before 19 May 1984 need not be relocated or may be replaced by another dispenser at the same place if it has the same number of dispensing hoses and dispenses the same number of products.

⁽⁴⁾ If a petroleum product installation is altered, a dispenser installed before 11 July 1991 need not be relocated or may be replaced by another dispenser at the same place if it has the same number of dispensing hoses and dispenses the same number of products.

In addition, the clearances must be increased, if necessary, so that any vehicle to be fuelled from that dispenser is completely within the property lines of the place where the dispenser is located.

8.146. A clearly identified and accessible emergency shut-off switch must be located away from any motor fuel dispenser at a distance not exceeding 25 m.

8.147. A motor fuel dispenser may be installed inside a building if the product it dispenses is a Class 2 or Class 3 liquid provided that

- (1) the building is not accessible to the public;
- (2) the dispenser is on the first storey;
- (3) the ventilation of the building meets the requirements of Part 6 of Chapter I; and
- (4) a drainage system is installed for petroleum products that may be spilled.

8.148. The pumps of a motor fuel dispenser installed or altered in a motor fuel dispensing outlet must have a mechanism that will prevent the dispenser pump from operating until a dispensing nozzle has been removed from its housing if the pump has been hand-activated, and that will shut off the pump when all nozzles have been reinserted in their housing; if the pump is connected to a satellite dispenser, it must also have a mechanism that prevents simultaneous dispensing of motor fuel.

The first paragraph does not apply to a dispenser that has a coiling mechanism.

8.149. If a submersible pump is installed in a motor fuel dispensing outlet, the dispenser must have a fusible safety valve set not higher than 70 °C, firmly attached to the pump island and meeting the requirements of ULC Standard S651 Emergency Valves for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada.

That requirement also applies to a tank installed or altered at a level higher than the base of a motor fuel dispenser. If it is an aboveground tank, it must have a mechanical or electrical anti-siphon valve installed where the piping connects to the tank. The safety valve must also be installed so that the shear point is situated in the zone extending 25 mm below the base of a motor fuel dispenser to 13 mm above the base.

8.150. The pump referred to in section 8.149 must have a leak detector device that, if the circumstances require, prevents the pump from operating.

8.151. The pumps of a motor fuel dispenser installed in a motor fuel dispensing outlet must have a control device to prevent the pressure created from exceeding the allowable stress limit.

8.152. The pit for a submersible pump or the piping of a submersible pump in a motor fuel dispensing outlet must be enclosed in a liquid-tight casing resistant to petroleum products. The casing must also be covered and installed in such a manner as to prevent external loads being transmitted to the tank or piping.

The pit must be large enough to enable the pump to be inspected and serviced.

8.153. The dispensing nozzle on a dispenser hose in a motor fuel dispensing outlet must have

- (1) an automatic shut-off device if it dispenses a Class 1 or Class 2 petroleum product motor fuel, except in the case of an airport outlet; and
- (2) a rubber anti-splash collar.

The installation of a dispensing nozzle with a latch-open device at a self-serve facility, an airport outlet or a marina outlet is prohibited.

8.154. A contractor or owner-builder may not install a dispensing nozzle on a motor fuel dispenser hose unless the nozzle meets the requirements of CAN/ULC Standard S620 Hose Nozzle Valves for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada, or is of a type used for aviation fuel, at an airport outlet.

8.155. A contractor or owner-builder may not install on a motor fuel dispenser a hose that dispenses a Class 1 or Class 2 petroleum product unless the hose meets the requirements of CAN/ULC Standard S612 Hose for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada, or is a type used for aviation fuel, at an airport outlet. The dispenser must also be designed so that a person fuelling a vehicle activates the dispensing nozzle manually.

8.156. A hose on a motor fuel dispenser must be no longer than

- (1) 5 m; it may however be 6 m long if it has a retracting mechanism;
- (2) 6 m for an unattended self-serve facility; it may however be 7.5 m long if it has a retracting or coiling mechanism; or

(3) 7.5 m for an airport outlet, a user outlet or a marina outlet if it has a retracting mechanism; that requirement does not apply to a hose with a coiling mechanism.

§2. Service stations and service centres

8.157. Petroleum equipment may be installed in or near a building housing a service station or service centre if

(1) the hazardous areas listed in Schedule II are separated from any room housing a solid or liquid fuel or gas heating appliance by walls having a fire-resistance rating of at least one hour within the meaning of Chapter I;

(2) the room containing such heating appliance

(a) does not have an opening less than 2.5 m from the floor; or

(b) is not used to store a Class 1 or Class 2 petroleum product or as a service area where work on the fuel supply system of internal combustion engines or any dispensing, transferring or handling of Class 1 petroleum products is being performed; the bottom of the combustion chamber must be at least 500 mm above the floor and the heating appliance must be protected from impact;

(3) the combustion air necessary for the appliance comes from outside the building;

(4) the return air intake of a forced-air heating appliance is at least 1.25 m from the floor if it is located in a room listed as a hazardous area in Schedule II; and

(5) the burner and combustion chamber of the equipment are at least 2.5 m from the floor, in an area used for dispensing, transferring or handling Class 1 petroleum products.

§3. Self-serve facilities

8.158. Every motor fuel dispenser in a self-serve facility must have a remote on and off control of a console type located within a building.

8.159. The console referred to in section 8.158 must

(1) house the on and off controls of not more than 12 motor fuel dispensers;

(2) allow not more than eight dispenser nozzles to be used simultaneously; and

(3) have an emergency master control that shuts off the dispensing of motor fuel to all dispensers simultaneously.

8.160. The console referred to in section 8.158 must be located at a distance that is

(1) not more than 25 m from the motor fuel dispenser; or

(2) not more than 35 m from the motor fuel dispenser if the attendant is able to monitor from the work station the use of the dispenser using a camera and screen electrically interlocked with the dispenser.

8.161. A pump island in a self-serve facility must have a two-way communication system between the attendant and the consumer.

8.162. The location of motor fuel dispensers referred to in section 8.158 must be within a 160° visual field from the console.

A dispenser not intended to be operated as a self-serve facility must not be located between the console and a self-serve dispenser.

An unattended motor fuel dispenser in a self-serve facility must be located on the island farthest from the console.

8.163. Signs posted in a self-serve facility must direct all heavy vehicles likely to block the line of vision of an attendant to refuel at the island farthest from the console.

8.164. The siting of a pump island in a self-serve facility must allow an attendant to monitor, from the work station, the use of the dispensing nozzles, unless the island has mirrors or cameras and a screen for that purpose.

§4. Unattended self-serve facilities

8.165. A sign at least 5 mm high stating the procedure to follow in the event of fire or a fuel spill must be conspicuously posted in the fuelling area in an unattended self-serve facility.

8.166. The fuelling area referred to in section 8.165 must have a drainage system able to collect motor fuel in that area in the event of a leak or spill.

The drainage system must consist of a concrete apron having a minimum 1% slope away from the pump island, an oil separator and a drain connecting the apron and the separator.

The oil separator must be of a capacity sufficient to accept rainwater flow from the apron and flow from the motor fuel dispenser having the greatest flow.

8.167. A coin, card or key-activated motor fuel dispenser that enables fuelling without the intervention of an attendant may be installed only in an unattended self-serve facility.

The flow of the unattended motor fuel dispenser must not exceed 70 L/min for motor fuel that is a Class 1 petroleum product or 180 L/min for motor fuel that is a Class 2 petroleum product.

The pump for such a dispenser must shut off automatically after 5 minutes of operation for motor fuel that is a Class 1 petroleum product and after 10 minutes for motor fuel that is a Class 2 petroleum product.

8.168. An unattended motor fuel dispenser situated near a bulk plant must be located at a distance that is

- (1) not less than 6 m from the fenced area of the bulk plant;
- (2) not less than 30 m from an aboveground tank; and
- (3) not less than 15 m from the loading and unloading facilities of the bulk plant.

§5. *Marina outlets*

8.169. A motor fuel dispenser in a marina outlet and the piping installed on a dock, wharf, pier or pontoon must be protected, where applicable, from impact such as impact from a water craft or seaplane.

8.170. The piping of a tank installed at an elevation above the base of the motor fuel dispenser must have a solenoid check valve at the tank outlet that is designed to open only when the dispenser is being operated.

If the piping is connected to a submersible pump with a leak detection system, the solenoid check valve must be installed between the tank and the leak detection system.

8.171. Every motor fuel dispenser in a marina outlet must have a safety valve that meets the requirements of section 8.149.

8.172. A tank that is to store motor fuel must be situated not less than 4.5 m from the average annual high-water mark within the meaning of the Protection Policy for Lakeshores, Riverbanks, Littoral Zones and Floodplains.

8.173. An underground tank installed at a marina outlet must have an observation well situated between the outlet and the shore and extend 900 mm below the low water line.

8.174. A tank that is to store motor fuel for trade purposes may not be installed aboveground unless it is surrounded by a dike and a fence that meet, where applicable, the requirements of sections 8.61 to 8.63, paragraphs 1 and 3 of section 8.65 and paragraphs 1 and 2 of section 8.217.

8.175. Piping installed on a dock, wharf, pier or pontoon must have two accessible shut-off valves designed to stop the supply of motor fuel from the shore. One of the valves must be located less than 350 mm from the edge of the dock, wharf, pier or pontoon, and the second valve must be located less than 350 mm from the connection with the dispenser.

8.176. Piping installed between the shore and piers or wharves must be provided with swing joints or flexible connections to enable the pier or wharf and shore piping to move independently without strain on the piping.

8.177. A motor fuel dispenser installation for a marina outlet must be installed

- (1) on the shore; or
- (2) on a dock, wharf, pier or pontoon.

A motor fuel dispenser must, if installed on a floating pontoon, be as close as practicable to the shore so that the piping installed above the water is as short as practicable.

§6. *Airport outlets*

8.178. An airport outlet tank that is to store aviation fuel must be installed in compliance with the following requirements:

- (1) it must have a manhole;
- (2) all its metallic components must be bonded and grounded in accordance with Chapter V if the tank is fibreglass;

(3) it must have a 1% slope if it is a horizontal tank;

(4) it must have a water draw-off device located at the lowest point on the tank; and

(5) it must have a floating suction system, if it is to store aviation turbine fuel.

8.179. The use of galvanized steel piping that is to contain aviation fuel during construction work is prohibited.

8.180. Piping installed downstream of the filter must be of a non-corrosive material that is

- (1) aluminum alloy;
- (2) reinforced glass fibre;
- (3) stainless steel; or
- (4) flexible hosing.

8.181. A contractor or owner-builder may not install tanks to store aviation fuel included in petroleum products of various classes, unless the dispensers have grade selective nozzle spouts that meet the requirements of SAE AS Standard 1852 Nozzles and Ports-Gravity Fueling Interface Standard for Civil Aircraft, published by the Society of Automotive Engineers.

8.182. An aboveground tank must be sited so that the distance between the dike centre line and the airport complex is not less than 45 m.

In the case of double-walled tanks or contained tank assemblies, that distance must be measured between the outer tank shell or secondary containment and airport complex.

8.183. A fill pipe installed on a tank that is to store aviation fuel must have a line strainer fitted with No. 40 or the equivalent of a No. 40 mesh basket; a line strainer with a No. 60 mesh basket must also be installed on the upstream side of each meter, pump and piece of equipment requiring a line strainer.

8.184. A petroleum equipment installation dispensing aviation fuel in an airport outlet must have a filtering system comprising at least one of the following:

- (1) a 5 µm filter;
- (2) a 15 P.P.M. water separator filter; or
- (3) a filter monitor.

8.185. An installation dispensing aviation fuel that is at a height exceeding 1.6 m must have an obstacle light.

8.186. An installation dispensing aviation fuel in an airport outlet must have a ground conforming to the requirements of Chapter V.

8.187. A sign that indicates, for fuelling personnel, the operating procedure for petroleum equipment dispensing aviation fuel and the testing procedures that must be conducted for that purpose must be posted in the airport outlet.

8.188. Piping containing petroleum products installed in an airport outlet must be marked in compliance with API Standard 1542 Identification Markings for Dedicated Aviation Fuel Manufacturing and Distribution Facilities, Airport Storage and Mobile Fuelling Equipment, published by the American Petroleum Institute.

8.189. An aviation fuel dispenser installed in an airport outlet must be marked in compliance with the standard referred to in section 8.188. The lettering must be at least 80 mm in height.

8.190. The requirements of sections 8.169 to 8.172 and those of sections 8.174, 8.175 and 8.177 also apply to an airport outlet from which an aircraft is fuelled on a body of water.

§7. *User outlets*

8.191. The flow of a motor fuel dispenser in a user outlet must be not more than 70 L/min for motor fuel that is a Class 1 petroleum product and not more than 180 L/min for motor fuel that is a Class 2 petroleum product.

DIVISION X PROVISIONS APPLICABLE TO BULK PLANTS

§1. *General*

8.192. A bulk plant on an area subject to a 20-year flood event as determined in the land use planning and development plans or in an interim control by-law, adopted under the Act respecting land use planning and development (R.S.Q., c. A-19.1), must meet the following requirements:

- (1) each aboveground tank in the bulk plant must be installed in such a manner that the bottom is above the high-water mark; and
- (2) a source of water must be available for tank ballast.

8.193. A gate and a loading and unloading ramp installed in a bulk plant and any place where petroleum equipment may cause the presence of flammable vapours must have a sign reading “DÉFENSE DE FUMER” or a pictogram similar to that appearing in Schedule I.

8.194. A valve of an aboveground line connected to a tank, the end of a petroleum product line and a fill pipe must be identified in compliance with the document entitled “Colour-Symbol System to Mark Equipment and Vehicles for Product Identification”, published by the Canadian Petroleum Products Institute.

§2. Loading and unloading facilities

8.195. A facility for loading and unloading petroleum products in a bulk plant must be sited

(1) in the case of a Class 1 petroleum product, at a distance of more than 8 m from any aboveground tank, building or property line where the facility is located; or

(2) in the case of a Class 2 or Class 3 petroleum product, at a distance of more than 5 m from any aboveground tank, building or property line where the facility is located.

The distance must be calculated from the down tube of a loading arm extending into the tank truck or from the connection of the tank truck when it is filled by bottom loading and the shelter for personnel and pumps must be considered integral parts of the facility.

8.196. At a loading or unloading facility for tank cars, the minimum distance from any railway line must be in conformance with General Order No. 0-32, Flammable Liquids Bulk Storage Regulations, published by Transport Canada.

8.197. Combustible material must be at a distance of not less than 5 m from the loading and unloading facilities and from the fill and gauge pipes erected or installed in a bulk plant.

8.198. The vent of a tank storing a Class 1 petroleum product in a bulk plant must be installed at a distance of not less than 8 m from the loading and unloading facility and from a parking area.

8.199. The loading or unloading ramp and every tank in a bulk plant must be situated at a distance of not less than 40 m from the fire station of the bulk plant.

The ramp must be of metal or concrete.

8.200. The loading arm on a facility for unloading a tank truck or a tank car through the manhole must be long enough to extend down not less than 200 mm from the bottom of the cargo tank and have a valve that must be held open manually.

8.201. Piping on a facility for unloading a tank truck or a tank car by means of a pump must have a soft-seat check valve.

8.202. The fill pipe on the tank of a facility used to store petroleum products must have a tight-fill connection using a hose.

8.203. The hose on a facility dispensing petroleum products in a container of not more than 225 L designed to be moved must have a delivery nozzle of non-magnetic material provided with a manual trigger and an automatic shut-off device.

8.204. A loading and unloading facility in a bulk plant must have barriers that protect it from vehicle impact.

8.205. A loading and unloading facility must have a ground that meets the requirements of Chapter V, an electrical conductor and a clip making it possible to ground the cargo tank.

In the case of a key-operated bulk plant, the petroleum product can flow only if the grounding is effected.

8.206. A facility for filling a tank truck or tank car by bottom loading must

(1) have been designed to limit the loading rate to not more than 3,000 L/min; and

(2) have a preset meter.

8.207. A key-operated facility for loading a tank truck or tank car that is supplied by an aboveground tank in a bulk plant must have a remote control shut-off valve that opens only when the motor of the loading pump is operating.

The valve must be located at the outlet of the tank if the bulk plant is to be left unattended.

8.208. The portion of the loading and unloading area of a bulk plant used to park a cargo tank during loading or unloading must,

(1) in the case of Class 1 or Class 2 petroleum products, have a collection system for the products; the system must consist of a concrete apron having a minimum 1%

slope away from the pump island in a direction opposite the loading or unloading ramp, an oil separator and a drain connecting the apron and the separator; or

(2) in the case of Class 3 petroleum products or Class 1, Class 2 and Class 3 petroleum products in bulk plants located north of the 53rd parallel of north latitude and bulk plants in a designated location, be liquid-tight and designed in such manner that a spilled product remains confined.

§3. Pumping

8.209. A positive displacement pump in a bulk plant must have a safety valve and a return bypass to the pump supply.

8.210. A centrifugal pump in a bulk plant must have a check valve on the pump outlet, if it is without a built-in safety valve.

8.211. A pump in a bulk plant that is subject to vehicle impact must be protected by a barrier or by a concrete or metal curb.

8.212. A pump or motor may not be installed below a tank or in a building in which a petroleum product is handled.

8.213. A pump in a bulk plant must,

(1) if it is above ground level and outside buildings,

(a) be located not less than 3 m from the property lines where the pump is situated; and

(b) be located not less than 1.5 m from any opening in the main building of the bulk plant; and

(2) be located not less than 8 m from any ignition source.

8.214. A pump in a bulk plant must be installed so that vibration is not transmitted to the petroleum product installations connected to it.

8.215. An electric motor for a pump in a bulk plant must have at least two controls, one of which must be in the control box at a distance of not less than 15 m from each loading or unloading ramp and from each tank.

8.216. In a bulk plant, the pit housing an underground pump and the multiple connection pipes of a submerged pump must be enclosed within a casing made of metal or concrete and be installed in such manner that it does not transmit external loads to the pump, tank or piping.

§4. Fencing

8.217. A fence must be erected around a bulk plant and

(1) be not less than 1.8 m high;

(2) be of firmly meshed metal wire of a gauge not smaller than USSMSG No. 9, if it is made of steel with mesh openings not greater than 150 mm on the side;

(3) be not less than 150 mm from the ground, including its gates;

(4) be fixed to metal poles driven solidly into the ground; and

(5) have at least two gates to enable traffic of road vehicles that meet the requirements of paragraphs 1, 2 and 4, as remote from each other as practicable and that have locking devices.

DIVISION XI OFFENCES

8.218. Every contravention of any of the provisions of this Chapter constitutes an offence.”

2. This Regulation comes into force on the fifteenth day following the date of its publication in the *Gazette officielle du Québec*.

SCHEDULE II

(s. 8.157)

HAZARDOUS AREAS IN WHICH A HEATING APPLIANCE MAY NOT BE INSTALLED

1. The area around the end of the fill pipe of an underground tank, up to 0.5 m from ground level and within a horizontal radius of 3 m;
2. The area around the vent outlet of an underground tank, up to a radius of 5 m in all directions;
3. A dispensing area, up to 0.5 m from ground level;
4. The area around a motor fuel dispenser, up to 1.5 m in all directions;
5. A service area, up to 0.5 m above ground or floor level over the entire surface area;
6. A zone for transferring Class 1 petroleum products, up to 1.5 m in all directions;
7. A salesroom, storeroom or washroom, if an opening connects to any area described above; and
8. Any space, pit or box below ground level and located wholly or partly in any area described above.

Draft Regulation

Building Act
(R.S.Q., c. B-1.1; 2005, c.10)

Regulation**— Amendments**

Notice is hereby given, in accordance with sections 10 and 11 of the Regulations Act (R.S.Q., c. R-18.1), that the Regulation to amend the Regulation respecting the application of the Building Act, appearing below, may be made by the Government, with or without amendment, on the expiry of 45 days following this publication.

The purpose of the draft Regulation is to determine, in relation with the draft Regulation to amend the Construction Code that introduces Chapter VIII - Petroleum Equipment Installation, and the draft Regulation to amend the Safety Code that introduces Chapter VI - Petroleum Equipment Installation, the exemptions related to their application.

As well, it proposes to subject the petroleum equipment installations owned by the Government and its departments and the bodies that are its mandataries to Chapter II and III of the Building Act (R.S.Q., c. B-1.1) and to the regulations applying those chapters, in particular Chapter VIII of the Construction Code and Chapter VI of the Safety Code. Construction work carried out on those installations, as well as their use and maintenance will be governed by the same requirements as those applicable to appliances in the private sector.

To date, study of the matter has shown no financial impact on the public or enterprises, including small and medium-sized enterprises.

Further information may be obtained by contacting Pierre Gauthier, Régie du bâtiment du Québec, 800, place D'Youville, 15^e étage, Québec (Québec) G1R 5S3; telephone: 418 643-9896; fax: 418 646-9280.

Any interested person having comments to make on the matter is asked to send them in writing, before the expiry of the 45-day period, to Daniel Gilbert, President and Chief Executive Officer, Régie du bâtiment du Québec, 545, boulevard Crémazie Est, 3^e étage, Montréal (Québec) H2M 2V2.

LAURENT LESSARD,
Minister of Labour

Regulation to amend the Regulation respecting the application of the Building Act*

Building Act
(R.S.Q., c. B-1.1, ss. 4.1, 182, 1st par., subpars. 1 and 3, and s. 192; 2005, c. 10, ss. 27, 61 and 80)

1. The Regulation respecting the application of the Building Act is amended by replacing “or on an installation designed to use or to distribute gas” in the second paragraph of section 1 by “, an installation designed to use or distribute gas or a petroleum equipment installation”.

* The Regulation respecting the application of the Building Act, made by Order in Council 375-95 dated 22 March 1995 (1995, *G.O.* 2, 1100), was last amended by the regulation made by Order in Council 676-2006 dated 28 June 2006 (2006, *G.O.* 2, 1919A). For previous amendments, refer to the *Tableau des modifications et Index sommaire*, Québec Official Publisher, 2006, updated to 1 September 2006.

2. The Regulation is amended by inserting the following after section 1:

“**1.1.** Subject to section 49 of the Act, amended by section 44 of chapter 10 of the Statutes of 2005, a contractor and an owner-builder are exempt from the application of Chapter IV of the Act as regards the requirement to hold a “4515 petroleum equipment installation contractor” licence in the subcategory of the category of specialized contractor and in the subcategory of the category of owner-builder referred to in Schedule B to the Regulation respecting the professional qualification of building contractors and owner-builders approved by Order in Council 876-92 dated 10 June 1992 where

(1) the planned construction work involves the installation of an aboveground tank outside the building, if the tank is not connected by piping to an apparatus designed to use, dispense or transfer a petroleum product or to another tank, and the tank’s capacity is

(a) less than 2500 L for a tank that is to contain gasoline, fuel ethanol or aviation fuel; or

(b) less than 5000 L for a tank that is to contain diesel fuel, biodiesel fuel or fuel oil;

(2) the planned construction work involves the installation or removal of an aboveground petroleum equipment installation outside a building when the installation was manufactured and a tank was connected by piping, during the manufacturing, to an apparatus designed to use, dispense or transfer a petroleum product, and the tank’s capacity is

(a) less than 2500 L for a tank that is to contain gasoline, fuel ethanol or aviation fuel; or

(b) less than 5000 L for a tank that is to contain diesel fuel, biodiesel fuel or fuel oil; or

(3) the planned construction work involves the installation, maintenance, repair or alteration of an apparatus that is part of a petroleum equipment installation.”.

3. The Regulation is amended by inserting the following after section 3.3.0.1:

“DIVISION I.2

EXEMPTION FROM THE APPLICATION OF SECTION 35 OF THE BUILDING ACT

3.3.0.2. The owner of a petroleum equipment installation that includes high-risk petroleum equipment is exempt from furnishing the certificate of conformity

required under section 35 of the Building Act if the owner holds an approval referred to in section 80 of the Act to amend the Act respecting petroleum products and equipment, the Building Act and other legislative provisions (2005, c. 10).”.

4. The Regulation is amended by inserting the following after section 3.3.5:

“DIVISION II.3

EXEMPTION FROM THE APPLICATION OF CHAPTER VIII OF THE CONSTRUCTION CODE AND CHAPTER VI OF THE SAFETY CODE

3.3.6. The following are exempt from the application of Chapter VIII of the Construction Code approved by Order in Council dated and Chapter VI of the Safety Code approved by Order in Council dated :

(1) any apparatus that uses a petroleum product in a petroleum equipment installation and that is to be connected by piping to a tank designed to hold such a product; and

(2) any petroleum equipment or petroleum equipment installation manufactured and designed to use a petroleum product.”.

5. Section 3.5 is amended by inserting “, their petroleum equipment installations” after “gas”.

6. Section 3.6 is amended by inserting “, their petroleum equipment installations” after “electrical installations”.

7. This Regulation comes into force on the fifteenth day following the date of its publication in the *Gazette officielle du Québec*.

7875

Draft Regulation

Building Act
(R.S.Q., c. B-1.1)

Safety Code — Amendment

Notice is hereby given, in accordance with sections 10 and 11 of the Regulations Act (R.S.Q., c. R-18.1), that the Regulation to amend the Safety Code, appearing below, may be approved by the Government with or without amendment, on the expiry of 45 days following this publication.

The purpose of the draft Regulation is to establish throughout Québec the basic standards that apply to petroleum equipment installations (installations to use, store or dispense petroleum products), to ensure the safety of the public using them. The standards are now adopted by the Régie du bâtiment du Québec under the Building Act (R.S.Q., c. B-1.1).

The standards constitute Chapter VI of the Safety Code and are essentially the requirements already set out in the Act respecting petroleum products and equipment (R.S.Q., c. P-29.1) and the regulatory requirements currently in force, made under that Act and set out in the Regulation respecting petroleum products and equipment, approved by Order in Council 753-91 dated 29 May 1991 (1991, *G.O.* 2, 1839). Adaptations have been made to take into account the provisions of the Building Act, to facilitate their applications and mainly to distinguish between the responsibilities of architects, engineers and contractors, which are integrated into the Construction Code, and those of owners of petroleum equipment installations.

The draft Regulation sets out minimum safety standards respecting the condition, use, maintenance and operation of the installations and their vicinity that the owners must comply with in order to prevent accidents and fires.

The draft Regulation also includes framework measures for the monitoring of compliance with the requirements, in particular a process to monitor the compliance of high-risk petroleum equipment forming part of a petroleum equipment installation, using certificates of conformity that must be produced by persons recognized by the Board and furnished by the owners prior to the issue of a permit authorizing its use.

To date, study of the matter has shown no financial impact on the public or enterprises, including small and medium-sized enterprises.

Further information may be obtained by contacting Pierre Gauthier, Régie du bâtiment du Québec, 800, place d'Youville, 15^e étage, Québec (Québec) G1R 5S3; telephone: 418 643-9896 or fax: 418 646-9280.

Any interested person having comments to make on the matter is asked to send them in writing, before the expiry of the 45-day period, to Daniel Gilbert, President and Chief Executive Officer, Régie du bâtiment du Québec, 545, boulevard Crémazie Est, 3^e étage, Montréal (Québec) H2M 2V2.

LAURENT LESSARD,
Minister of Labour

Regulation to amend the Safety Code *

Building Act

(R.S.Q., c. B-1.1, ss. 35.2, 175, 176, 176.1, 178, 179, 185, 1st par., subpars. 2.1, 5, 5.1, 5.2, 6.3, 6.4, 20, 37 and 38 and s. 192; 2005, c. 10 ss. 60, 62 and 63)

1. The Safety Code is amended by adding the following after section 108:

“CHAPTER VI PETROLEUM EQUIPMENT INSTALLATION

DIVISION 1 INTERPRETATION

109. In this Chapter, unless the context indicates otherwise,

“cargo tank” means a tank having one or more compartments fixed to a truck, a railway car, a trailer or a semi-trailer and used to transport, transfer or dispense petroleum products; (*citerne*)

“container” means a container that holds less than 45 L; (*contenant*)

“fuelling area” means the part of the dispensing area situated opposite each motor fuel dispenser where vehicles stop to be refuelled; (*aire de ravitaillement*)

“portable tank” means a container that holds not less than 45 L and not more than 225 L and is designed to be moved; (*réservoir portatif*)

“reception area” means the area around the fill pipe of an underground tank and around the site of an aboveground tank; (*aire de réception*)

“service area” means the space in a building used for servicing or repairing vehicles. (*aire d’entretien*)

In this Chapter, “airport outlet”, “aviation fuel”, “biodiesel fuel”, “booth”, “bulk plant”, “designated location”, “diesel fuel”, “first storey”, “flash point”, “fuel oil”, “high-risk petroleum equipment”, “marina outlet”, “motor fuel”, “motor fuel dispensing outlet”, “petroleum equipment”, “recognized person”, “self-serve

* The Safety Code, approved by Order in Council 964-2002 dated 21 August 2002 (2002, *G.O.* 2, 4654), was last amended by the regulation approved by Order in Council 121-2006 dated 28 February 2006 (2006, *G.O.* 2, 1121). For previous amendments, refer to the *Tableau des modifications et Index sommaire*, Québec Official Publisher, 2006, updated to 1 September 2006.

facility”, “service centre”, “storey”, “tank”, “unattended self-serve facility”, “underground piping”, “underground tank” and “user outlet” have the meaning assigned in section 8.01 of Chapter VIII of the Construction Code made under the Building Act (R.S.Q., c. B-1.1).

110. For the purposes of this Chapter, petroleum products include the classes and types listed in section 8.02 of the Construction Code.

DIVISION II APPLICATION

111. Subject to the regulatory exemptions under subparagraph 1 of the first paragraph of section 182 of the Building Act, the codes, standards and provisions of this Chapter apply to petroleum equipment and petroleum equipment installations covered by that Act, including their vicinity.

Despite the first paragraph, petroleum equipment installations erected before (*insert the date of coming into force of Chapter VIII of the Construction Code*) are considered to comply with the provisions of this Chapter that require compliance with a technical standard drawn up by a body if the equipment that is part thereof meets the requirements of the technical standard applicable at the time of the erection or alteration of the installation.

In addition, if a provision of this Chapter requires that petroleum equipment be approved under such a standard, the equipment is presumed to comply with the provision if it is approved under the standard applicable at the time of its manufacturing or erection.

DIVISION III REGISTER, ATTESTATION AND PERMITS

§1. Register

112. The owner of a petroleum equipment installation that includes high-risk petroleum equipment must keep in a register or append thereto, as the case may be, the following information and documents:

(1) during the existence of the petroleum equipment, a copy of the plans relating to all construction work carried out on the equipment and all technical information relating to the alterations made to the equipment;

(2) for at least 10 years,

(a) inspection certificates issued by a certified inspector under section 52 of the Act respecting petroleum products and equipment (R.S.Q., c. P-29.1) and certificates of conformity or safety produced by a recognized person;

(b) the information listed in paragraph 9 of section 119;

(c) notices of correction given to a permit holder under section 92 of the Act respecting petroleum products and equipment as it read before (*insert the date of coming into force of chapter 10 of the Statutes of 2005*) or remedial notices given by the Régie du bâtiment du Québec under section 122 of the Building Act;

(d) corrosion protection system inspection reports;

(e) leak detection system inspection reports;

(f) leak detection test reports;

(g) operating performance monitoring reports, tests, inspections, water dips required under section 141 and a description of the measures taken to meet, where applicable, the requirements of sections 137 to 140, 143 to 151, 187 and 225;

(h) periods during which the equipment was not used; and

(i) a description of any measure taken to meet, if applicable, the requirements of sections 172, 173 and 177; and

(3) for at least two years,

(a) copies of petroleum product purchase, delivery, sale and withdrawal records;

(b) gauge readings of the product, water dip readings in the tanks and readings of dispenser meters;

(c) calculations allowing the monthly determination of any gain or loss of product if gauging of petroleum products is required under this Chapter; and

(d) dates on which draining was carried out, the quantity that was drained and the name of the person or enterprise that carried out the draining.

For fuel oil, diesel and biodiesel tanks used to supply a generator set, only the documents in subparagraph 1 need be retained for a minimum of two years.

The register must be made available to the Régie or a recognized person.

§2. Certificates of conformity

113. The owner of a petroleum equipment installation that includes high-risk petroleum equipment must provide the Régie at the following inspection intervals

with a certificate of conformity that meets the requirements of section 115, produced and signed by a recognized person:

- (1) for underground petroleum equipment
 - (a) having a double wall without an automatic leak detection system or having a single wall, every two years; or
 - (b) for fuel oil or having a double wall with an automatic leak detection system, every four years;
- (2) for bulk plants, every two years; and
- (3) for aboveground petroleum equipment, every six years.

If a private inspection program referred to in Division V of Chapter III of the Act respecting petroleum products and equipment as it read before (*insert the date of coming into force of chapter 10 of the Statutes of 2005*) ends and at least six months remain before the expiry of the permit, the holder of the permit must provide the Régie with a certificate of conformity before that date.

114. The inspection required for the certificate of conformity referred to in section 113 must be carried out within 12 months before the end of the period covered by the certificate.

The inspection period referred to in section 113 starts on the expiry date of the first permit issued at the address of the site where the high-risk petroleum equipment covered by the permit is situated. The inspection period for equipment existing before (*insert the date of coming into force of this Regulation*) remains the same as the period applicable before that date.

If new high-risk petroleum equipment is erected at the address for which the owner holds a permit, the inspection period required for the equipment must be adjusted to coincide with the current period.

If petroleum equipment installed at the same address has different inspection periods, the shorter period takes precedence.

115. The recognized person is to certify

- (1) that he or she has verified the register referred to in section 112 and that the register is in compliance with the requirements of that section;
- (2) that he or she has searched for signs of leaks to ensure that the petroleum equipment does not leak and is not a hazard to public safety;

(3) that, in the case of underground petroleum equipment, he or she has examined the operation of the equipment and inventories to ensure that they meet the requirements of sections 143, 172, 173, the second paragraph of section 174, sections 175, 211, the first paragraph of section 213, sections 223, 224, the first paragraph of section 233, sections 242, 244, 248 and 252 of this Chapter and the requirements of section 8.95, the third paragraph of section 8.96 with respect to impact protection, sections 8.97, 8.124, 8.125, 8.127, 8.128, 8.142, 8.145, 8.146, the first paragraph of section 8.153, sections 8.156, 8.159, 8.160, the second and third paragraphs of section 8.162, sections 8.164, 8.165, the first and second paragraphs of section 8.166, sections 8.168, 8.170, 8.172, 8.180, 8.183 and 8.185 of the Construction Code;

(4) that, in the case of a bulk plant, he or she has examined the operation of the petroleum equipment to ensure that it meets the requirements of sections 143, 172, 173, the second paragraph of section 174, sections 175, 186, the first paragraph of section 188, section 192, the first paragraph of section 193, sections 198, 201, the second paragraph of section 205, section 211, the first paragraph of section 213, sections 222 to 224, the first paragraph of section 225, sections 252, 258, 260, 262, 263, 265 and 273 of this Chapter and the requirements of section 8.47 with respect to aboveground tanks, sections 8.64, the first paragraph of section 8.65, section 8.93, the third paragraph of section 8.96 with respect to impact protection, sections 8.97, 8.108, paragraph 4 of section 8.113, the first, fourth and sixth paragraphs of section 8.116, sections 8.124, 8.125, 8.127, 8.128, 8.142, 8.143, 8.145, 8.146, 8.156, 8.195, 8.198, the first paragraph of section 8.199, section 8.200 with respect to manual valves, sections 8.204, 8.209, 8.211, 8.213, 8.215, paragraph 4 of section 8.127 and paragraph 5 of that section except with respect to the references to paragraphs 1 and 2 mentioned therein, of the Construction Code; and

(5) that, in the case of aboveground petroleum equipment other than bulk plants, he or she has examined the operation of the equipment to ensure that it meets the requirements of sections 156 and 184 but only with respect to the first paragraph of section 8.60 of the Construction Code, section 185, the first and second paragraphs of section 188, section 192, the second paragraph of section 193, sections 198, 201, the second paragraph of section 205, the first paragraph of section 213, sections 223, 224, the first paragraph of section 225, the second paragraph of section 227, the first paragraph of section 233, sections 241, 242, 244, paragraph 3 of section 246, sections 248 and 252 of this Chapter and the requirements of sections 8.53, 8.56, 8.57, 8.64, paragraph 1 of section 8.65, sections 8.72,

8.93, 9.95, the first and second paragraphs of section 8.96 with respect to Class 1 petroleum products and the third paragraph of section 8.96 with respect to impact protection, sections 8.97, 8.108, paragraphs 1 to 4 and 6 of section 8.116, sections 8.142, 8.145, 8.146, subparagraph 1 of the first paragraph of section 8.153, sections 8.156, 8.159, 8.160, the second and third paragraphs of section 8.162, sections 8.164, 8.165, the first and second paragraphs of section 8.166, sections 8.168, 8.170, paragraph 4 of section 8.178, sections 8.180, 8.183 and 8.185 of the Construction Code.

Otherwise, the recognized person must inform the owner of any irregularities found and the reasons for refusing to produce the required certificate of conformity. The person must also inform the Régie within 30 days.

The certificate must also contain a description of the petroleum equipment inspected, its type, make, model and capacity, the petroleum product it is to contain, the address of the place where it is situated, the date of signature, the name, address, telephone number, professional order membership number and temporary permit or certification number issued pursuant to the Act respecting petroleum products and equipment of the recognized person who produced the certificate. The certificate may be produced on the form provided for that purpose by the Régie.

116. Persons who meet the requirements of sections 8.13 and 8.14 of the Construction Code may be recognized by the Régie to produce and sign the certificate of conformity required under section 113.

117. The recognition of a person may be revoked by the Régie for the reasons listed in section 8.15 of the Construction Code.

§3. *Permits*

118. The owner of a petroleum equipment installation that includes at least one component that is high-risk petroleum equipment must obtain a permit for the use of all the high-risk petroleum equipment situated at the same address, until the equipment is removed from its respective place of use.

119. The owner of a petroleum equipment installation applying for the issue or renewal of a permit must provide the Régie with the following information and documents:

(1) the owner's name, home address and, where applicable, the business number assigned to the owner under the Act respecting the legal publicity of sole proprietorships, partnerships and legal persons (R.S.Q., c. P-45);

(2) if the application is made on behalf of a partnership or a legal person, the name of the partnership or legal person, the address of its head office and, where applicable, the business number referred to in paragraph 1;

(3) the address and telephone number of the site where the petroleum equipment covered by the application is situated if the address is different from the address of domicile or head office;

(4) if a certificate is required, the date of the certificate produced by a recognized person referred to in section 116 since the last application for the issue or renewal of a permit and the date on which the owner was informed by a recognized person of any irregularity; the owner must also provide the professional order membership number or temporary permit number of the person or the certification number of the certified inspector, where applicable;

(5) the characteristics of the petroleum equipment covered by the application, in particular

(a) the storage capacity in litres;

(b) the nature of the petroleum products stored or intended to be stored;

(c) the date of installation and the name and address of the contractor or owner-builder who installed the equipment;

(d) the year of manufacture and the name and address of the manufacturer;

(e) the automatic leak detection systems on high-risk petroleum equipment; and

(f) a description of the location of all high-risk petroleum equipment on the site;

(6) a declaration from the owner stating that the application information is accurate and complete;

(7) the date of the owner's signature;

(8) the certificate of conformity required; and

(9) in the case of an application for renewal, a declaration of the events having affected the equipment during the permit validity period, including

(a) all petroleum product leaks and spills greater than 100 L;

(b) all explosions and fires related to petroleum equipment;

(c) all failures in storage or dispensing equipment that are a hazard to public safety; and

(d) the date of the event and the extent of the damages.

120. A permit modification application must contain

(1) the information required under paragraphs 6 to 8 of section 119; and

(2) a description of the new equipment installed or the alterations made to the equipment covered by the permit.

121. At the time an application for the issue, modification or renewal of a permit is made, required information and documents previously provided to the Régie need not be re-filed if the owner attests to their current accuracy and completeness.

122. The Régie issues or renews a permit on the following conditions:

(1) the owner has provided the information and documents required under section 119;

(2) the application for issue or renewal has been received and the fees have been paid to the Régie;

(3) the owner has complied with all the provisions of this Chapter that apply to the petroleum equipment covered by the permit application after being convicted of an offence related to the equipment, or with a supplementary measure required under section 122 of the Building Act;

(4) when applying for a renewal, the owner declares that the requirements of this Chapter to ensure the testing of the operating performance of the petroleum equipment covered by the permit are met;

(5) the certificate of conformity or safety accompanying the permit application has not been produced on the basis of inaccurate or misleading information; and

(6) the certificate submitted has been produced by a recognized person.

123. A permit may only be modified by the Régie at the request of an owner if

(1) the name of the owner of the high-risk petroleum equipment or the address of the site where the equipment is situated has changed; or

(2) a change to the petroleum equipment covered by the permit during the permit validity period invalidates the permit or the certificates of conformity submitted.

The modification application must be accompanied by the required certificate of conformity, where applicable, and the fees payable to the Régie.

124. The owner must inform the Régie of any change resulting in inaccuracy or incompleteness of the information, the certificate of conformity or the other documents submitted with the application for the issue, renewal or modification of the permit.

125. The holder of a permit must post the permit in public view at the address where the petroleum equipment covered by the permit is situated.

126. The term of a permit is 24 months; a permit may, however, be issued for a period shorter than 24 months to meet

(1) the expiry dates of the permits issued to the same holder in the same administrative region;

(2) the expiry dates of the various permits for petroleum equipment situated at the same address; or

(3) the period of use of the petroleum equipment for an activity whose expected duration is shorter than two years.

127. A permit is suspended for so long as the holder does not comply with an order made under section 123 or 124 of the Building Act.

§4. Fees

128. The fee payable for the issue or renewal of a 24-month permit is \$130 to which \$40 is added for each 10,000-litre portion of petroleum product storage capacity up to a maximum of \$2,500.

If the validity period of the permit is shorter than 24 months, the fee payable is determined in proportion to the number of months of validity of the permit issued by the Régie but is not lower than \$85 per year.

DIVISION IV GENERAL PROVISIONS APPLICABLE TO ALL PETROLEUM EQUIPMENT

129. Petroleum equipment must be used for the purposes for which it is designed and must be maintained in proper and safe working order.

130. Petroleum equipment must be used and maintained so that it does not present a risk of spillage, leakage, fire, explosion or intoxication.

131. The owner of a petroleum installation or equipment must ensure during its operation that

- (1) the processes and equipment used are safe;
- (2) safety devices provided for that purpose are used correctly; and
- (3) the necessary precautions are taken so as to prevent risks of explosion, fire, spillage, leakage or other accidents.

The owner must also comply with the servicing, use and draining requirements applicable to the equipment or installation under this Chapter.

132. Petroleum equipment must

- (1) be leak-proof to prevent any risk of explosion, fire, spillage or other accident;
- (2) be used so as not to endanger the life of any person or cause serious injury;
- (3) be housed to limit access to authorized persons by the owner of the equipment and to prevent any contact with objects that may increase the risk of accidents; and
- (4) have protection devices that ensure the safety of persons who have access to the equipment or who use it.

133. The required rectification must be made if the operating conditions of the petroleum equipment are hazardous owing, in particular, to intensive use, modifications, wear and tear or obsolescence, or when a leak is detected.

134. Petroleum equipment that does not meet the minimum requirements for use, condition or servicing in this Chapter may not be used to store or dispense a petroleum product.

135. The owner of a petroleum equipment installation that includes high-risk petroleum equipment must inform the Régie of any fire, explosion, loss of life or disaster involving petroleum equipment within 24 hours after the owner becomes aware of the incident.

DIVISION V

TESTING OF THE OPERATING PERFORMANCE

§1. Application

136. This Division applies to the high-risk petroleum equipment in a petroleum equipment installation.

§2. Inspections

137. Every two years, the owner of underground petroleum equipment must

- (1) inspect the cathodic protection performance

(a) in the case of a sacrificial anode system, in accordance with CAN/ULC Standard S603.1-03 External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada; and

(b) in the case of an impressed current cathodic protection system where such system is an addition to an underground petroleum equipment installation, in accordance with RP0 Standard 169-2002 Control of External Corrosion on Underground or Submerged Metallic Piping Systems or RP0 Standard 285-2002 Corrosion Control of Underground Storage Tank System by Cathodic Protection, published by Nace International; and

- (2) ensure the proper operation of the automatic petroleum products leak detection system.

138. Every year, the owner must inspect and ensure the proper operation of

- (1) the safety valves of an aboveground piping system; and
- (2) every grounding circuit in a petroleum equipment installation.

139. The owner must ensure that every motor fuel dispenser connected to an underground tank has a meter that is calibrated at least once every two years.

§3. Leak detection tests

140. Where single-wall petroleum equipment is buried within 150 m from a vertical plane touching the closest outside wall of subway or pedestrian, road or railway tunnel works under construction or already completed, the owner must conduct a leak detection test every year in compliance with the second paragraph of section 8.130 of the Construction Code.

§4. Motor fuel dispensing

141. The owner must water dip each underground motor fuel tank every week.

The owner must also inspect the observation well if the tank does not have a continuous monitoring system with an alarm.

142. Every day the owner uses the equipment, the owner must

(1) gauge all underground tanks and read all dispenser meters; and

(2) reconcile receipt and withdrawal records for each underground tank with the daily gauge readings taken pursuant to subparagraph 1.

If, however, the owner of high-risk petroleum equipment does not use the equipment for more than one week, the owner must gauge the equipment once a week during the period the equipment is not used.

143. The owner must conduct leak detection tests on underground tanks and piping in accordance with the second paragraph of section 8.130 of the Construction Code each time one of the following occurs inexplicably:

(1) a volume loss of at least 0.5% of the petroleum products removed from a tank or a number of tanks containing the same product over a period of one month;

(2) a loss of petroleum products over at least five consecutive days;

(3) a loss of petroleum products over at least 18 days in a month, if the product level is measured every day;

(4) a loss or gain of petroleum products over at least 15 days in one month, if the product level is measured 6 days a week; or

(5) the water level in the bottom of the tank exceeds 50 mm.

144. The owner must inspect each year and ensure the proper operation of each fusible safety valve and automatic leak detection system according to the manufacturer's instructions.

§5. Airport outlets

145. The owner must inspect each year the grounding system of dispensers and tanks to ensure it meets the requirements of Chapter V of the Construction Code.

146. The owner must inspect the inside of each tank containing aviation fuel at least once every five years to prevent deposit build-up.

§6. Bulk plant servicing and inspection

147. The owner must inspect each year and ensure the proper operation of each safety valve in the petroleum equipment installation.

148. The owner must carry out a visual inspection of piping and the aboveground tank once a week to ensure they are leak-proof.

149. The owner must test once a month the operating performance of valves, overflow controls, vents and fire protection devices.

150. The owner must gauge or dip tanks at least once a week and, if there has been a receipt of petroleum products, the owner must gauge or dip the tanks during the day of receipt.

151. The owner must, using the volume added and removed, reconcile the volume of petroleum products that should be in the tanks with the volume obtained by gauging; in the case of an aboveground tank having a capacity greater than 250,000 L, the owner must also take into account the temperature of the petroleum product at the time of gauging.

DIVISION VI PROVISIONS APPLICABLE TO PETROLEUM EQUIPMENT

§1. Handling and prevention

152. The transfer of Class 1 and Class 2 petroleum products must take place at a distance of more than 5 m from a flame or any other ignition source.

153. A Class 1 petroleum product may not be used as a cleaner or solvent.

§2. Petroleum product storage

154. In addition to the provisions of this subdivision, the owner must comply with sections 8.19 and 8.20 of the Construction Code.

155. Class 1 and Class 2 petroleum products or substances impregnated with those products must be stored in sealed containers suitable for such products.

156. Storage of petroleum products inside a building must meet,

(1) in the case of a container, the requirements of section 4.2 of the National Fire Prevention Code of Canada – 2005, published by the Canadian Commission on Building and Fire Codes of the National Research Council of Canada;

(2) in the case of an aboveground tank not referred to in subparagraph 3, the requirements of section 4.3 of the National Fire Prevention Code of Canada, subject to the provisions of this Chapter; and

(3) in the case of a container in a motor fuel dispensing outlet, the requirements of section 4.6 of the National Fire Prevention Code of Canada.

Despite subparagraphs 1 and 2 of the first paragraph, storage of a petroleum product in a tank inside a building to supply a generator engine or a fuel oil system must meet the requirements of CAN/CSA Standard B139-04 Installation Code for Oil-Burning Equipment, published by the Canadian Standards Association.

§3. Containers and portable tanks

157. A container or a portable tank used for petroleum products must meet the requirements for small containers in the Transportation of Dangerous Substances Regulation made by Order in Council 866-2002 dated 10 July 2002.

158. A glass container may not be used to store a Class 1 petroleum product, except in the case of a sample of less than 1 L.

159. A damaged container or portable tank that presents a risk of leakage must not be used to store a petroleum product and its content, if applicable, must be transferred to an undamaged container or tank.

160. Every petroleum product container to be distributed must bear, in legible letters, the name of the product it contains.

161. Red must be the dominant colour on a container used for a Class 1 petroleum product.

The word “DANGER” or “INFLAMMABLE” must be legibly marked on the container and the nature of the contents must be specified.

162. A container or a portable tank containing a petroleum product must be hermetically sealed.

In the case of a metal container or portable tank that has a pump, it is considered hermetically sealed if the pump has a vapour-tight seal.

163. A Class 1 petroleum product must be dispensed from a portable tank with a hand pump that has a hermetic seal.

§4. Aboveground tank and piping

164. In addition to the provisions in this subdivision, the owner must comply with sections 8.24 to 8.26 of the Construction Code.

165. Nonmetallic piping must meet the requirements of any of standards ULC/ORD-C107.7-1993 Glass-Fibre Reinforced Plastic Pipe and Fittings for Flammable and Combustible Liquids, ULC/ORD-C107.4-1992 Ducted Flexible Underground Piping Systems for Flammable and Combustible Liquids and ULC/ORD-C971-2005 Nonmetallic Underground Piping for Flammable and Combustible Liquids, published by Underwriters’ Laboratories of Canada. Piping that meets the requirements of ULC/ORD Standard C971-2005 Nonmetallic Underground Piping for Flammable and Combustible Liquids must also be installed so that there are no joints in the ground.

166. Double-wall piping must consist of piping that meets the requirements of section 8.25 or 8.26 of the Construction Code or section 165 of this Chapter installed inside other piping that meets the requirements of section 8.25 or 8.26 of the Construction Code or the requirements of section 165 of this Chapter, or the requirements of ULC/ORD Standard C107.19 Secondary Containment of Underground Piping for Flammable and Combustible Liquids, published by Underwriters’ Laboratories of Canada.

On a Class A site, double-wall piping must have an automatic leak detection system with a visual and audible alarm that meets the requirements of ULC/ORD Standard C107.12-1992 Line Leak Detection Devices for Flammable Liquid Piping or ULC/ORD Standard C58.14-1992 Non-Volumetric Leak Detection Devices for Underground Flammable Liquid Storage Tanks, published by Underwriters’ Laboratories of Canada.

Despite the foregoing, vent piping need not be double-wall piping.

For the purposes of the second paragraph, the following places are Class A sites:

(1) a site within 1,000 m measured horizontally from a well used to collect drinking water for a residence that cannot be connected to a waterworks system, from the intake of a pipe used to supply a municipality with drinking water, from a channel used exclusively to

supply a municipality with drinking water or from a well whose water is used in the making of a food product; and

(2) a site within 50 m measured horizontally from a station, a tunnel or other underground structure necessary for the operation of a subway, a public building with one or more storeys situated below the ground floor or the first storey, as defined in the Public Buildings Safety Act (R.S.Q., c. S-3) or in its regulation, from an underground or semi-underground parking garage that may accommodate at least six vehicles and that requires mechanical ventilation in accordance with section 6.2.2.3 of Chapter I of the Construction Code made pursuant to the Building Act.

DIVISION VII

PROVISIONS APPLICABLE TO HIGH-RISK PETROLEUM EQUIPMENT

§1. General

167. High-risk petroleum equipment may only be used if there are portable fire extinguishers in proper working order nearby.

168. The owner must keep oil absorbents at all times on the premises where high-risk petroleum equipment is situated.

§2. Underground tanks

169. On a Class A site, as defined in section 166, the tank must have a double wall.

The double wall must have, in its interstitial space, an automatic leak detection system with a visual and audible alarm that meets the requirements of ULC/ORD Standard C58.12-1992 Leak Detection Devices (Volumetric Type) for Underground Flammable Liquid Storage Tanks or ULC/ORD Standard C58.14-1992 Non-Volumetric Leak Detection Devices for Underground Flammable Liquid Storage Tanks, published by Underwriters' Laboratories of Canada.

The double wall must also contain, in its interstitial space, where applicable, brine composed exclusively of calcium chloride with or without potassium chloride or sodium chloride where the respective concentration does not exceed 42%, 3% and 2%.

170. On a Class B site, a tank must

(1) have an automatic leak detection system; or

(2) meet the requirements of section 8.29 of the Construction Code and be connected to piping that meets the requirements of section 8.78 of that Code.

For the purposes of the first paragraph, the following sites are Class B sites:

(1) a site within 1,000 m measured horizontally from a water intake or from a well used for purposes other than those in subparagraph 1 of the fourth paragraph of section 166;

(2) a site within 50 m measured horizontally from a watercourse, lake, pond or any other comparable body of water or from an area subject to a 20-year flood event as indicated on the land use planning and development plans or in an interim control by-law adopted under the Act respecting land use planning and development (R.S.Q., c. A-19.1); and

(3) a site within 50 m but not more than 150 m measured horizontally from a subway station or tunnel, an underground public area or an underground parking garage.

171. Every excavation in which a tank has been installed since 11 July 1991 must have an observation well, unless the petroleum equipment installation was erected between 30 April 1999 and (*insert the date of coming into force of this Regulation*) and meets the requirements of sections 8.29 and 8.78 of the Construction Code. If two underground tanks are less than 1.5 m apart, at least one observation well must be installed.

The well must consist of a perforated pipe at least 150 mm in diameter installed vertically, extending down at least below the bottom of the tanks, and be accessible from the ground. The pipe must also be enclosed inside a permeable lining if it is buried in sand.

172. An owner who ceases to remove petroleum products from an underground tank for a period of at least one week but less than 180 days must

(1) lock the fill and gauge pipe caps and covers and motor fuel dispensers and lock the main electrical control; and

(2) gauge each tank every week.

173. An owner who ceases to remove petroleum products from an underground tank for a period of 180 days or more but less than two years must

(1) empty the tanks, piping, motor fuel dispensers and pumps of Class 1 petroleum products and, if calculations confirm that the groundwater may lift a tank, the owner must fill the tank with a petroleum product other than a Class 1 product;

(2) lock the fill and gauge pipe caps and covers and motor fuel dispensers and lock the main electrical control; and

(3) gauge each tank containing a petroleum product every month.

174. An owner who ceases permanently to remove petroleum products from an underground tank or who has not removed petroleum products for two years or more must comply with section 8.45 of the Construction Code.

Subject to section 31.51 of the Environment Quality Act, the owner may, however, comply only with paragraph 1 of section 8.45 if not more than five years have elapsed since petroleum products were last removed from the tank and one of the following tests shows that the tank and piping are leak-proof:

(1) a leak detection test that meets the requirements of the second paragraph of section 8.130 of the Construction Code; and

(2) for single or double-wall tanks emptied of any petroleum products, a pressure test using an inert gas performed in compliance with the following requirements:

(a) a safety valve set at not more than 40 kPa capable of discharging the flow from the pressure source must be installed on a tank opening and its operation must be inspected before each test;

(b) the pressure must be measured using a pressure gauge calibrated in units of not more than 1 kPa;

(c) a pressure of at least 30 kPa and not more than 35 kPa must be created inside the tank;

(d) once the temperature has been stabilized and the pressure source removed, the created pressure must be maintained for at least four hours; and

(e) in the case of a compartment tank, each compartment must be tested separately, not simultaneously and only when the adjacent compartment is not under pressure.

175. An owner of underground petroleum equipment who has ceased to remove petroleum products from the equipment for more than one year must conduct a leak detection test that meets the requirements of the second paragraph of section 8.130 of the Construction Code before using the equipment.

176. The owner of a site where underground petroleum equipment is installed must, before assigning rights to the site, inform the assignee in writing of tank and piping siting and of the length of time the equipment has not been used.

177. An underground tank may be abandoned on its site if the requirements of section 8.46 of the Construction Code are met.

§3. *Aboveground tanks*

178. In addition to the provisions of this subdivision, the owner must comply with sections 8.49 to 8.53, 8.56, 8.57, paragraph 4 of section 8.62 and sections 8.64 and 8.65 of the Construction Code.

179. Siting of an aboveground tank must meet the requirements of section 8.48 of the Construction Code with the references in Table 2 of that section to sections 8.60 and 8.61 replaced by references to sections 184 and 185 of this Chapter respectively.

180. Openings for gauging aboveground tanks intended to store Class 1 petroleum products must be provided with a vapour-tight cap or cover that must remain closed at all times except for gauging.

181. The intake end of a fill pipe for an aboveground tank must have a device that prevents its opening by any person not authorized by the owner of the equipment.

182. The shut-off valve required under section 8.57 of the Construction Code must remain closed and locked when the facility is closed except the shut-off valve on an installation supplying a heating system or a generator engine.

183. An aboveground tank that has a heating appliance must have thermometers and thermostats in proper working order so that the temperature of the product it contains is maintained at least 10 °C below its flash point.

184. An aboveground tank installed after 11 July 1991 must meet the requirements of section 8.60 of the Construction Code.

185. The dike required under section 184 is not required if the tank meets the requirements of section 8.61 of the Construction Code.

186. The dike around a tank must not be higher than 1.8 m from the bottom of the diked area, except in the case of a bulk plant dike erected before 1 January 1973.

187. The inside wall and the bottom of the diked area of a petroleum equipment installation erected after 30 April 1999 must meet the requirements of paragraph 5 of section 8.62 of the Construction Code. The owner must also comply with the requirements of section 8.63 of that Code.

188. The water in the diked area of an aboveground tank must be drained by a drainage system such as a sump or channel located at its lowest point having a valve kept closed that allows drainage of water.

The valve control for the drainage system must be accessible at all times.

The water must be channelled into an oil interceptor with a separator before disposal.

Water drained from an aboveground tank must be channelled directly into an oil interceptor with a separator before disposal.

189. No combustible material, container or portable tank may be located inside a diked area.

Vegetation to prevent soil erosion inside a diked area must be maintained in such manner that it does not contribute to a fire spreading.

190. Despite the second paragraph of section 111, the tank in a petroleum equipment installation may not be used to store a product other than a petroleum product, unless the diked area of the installation meets the requirements of paragraph F of section 4.3.2.3.2 of NFPA Standard 30-2003 Flammable and Combustible Liquids Code, published by the National Fire Protection Association.

191. An owner who ceases to remove petroleum products from an aboveground tank for a period of at least one week but less than 180 days must gauge the tank every week.

192. An owner who ceases to remove petroleum products from an aboveground tank for a period of 180 days or more but less than two years must

(1) drain all petroleum products from the tank, piping, loading and unloading equipment and leak and spill protection equipment;

(2) lock the fill and gauge pipe caps and covers and any other opening in an installation that contains a petroleum product, and lock the loading and unloading equipment and the main electrical control;

(3) condemn the stairs, walkways and other construction giving access to the roof of a tank; and

(4) permanently open the dike drainage valve if the dike contains only one tank.

193. An owner who permanently ceases to remove petroleum products from an aboveground tank or has not removed products for two years or more must

(1) drain petroleum products from the tank, piping and loading and unloading equipment; and

(2) remove the tank, piping, motor fuel dispensers, loading and unloading equipment and leak and spill protection equipment in accordance with the requirements of Chapter VIII of the Construction Code.

In the case of a marine bulk plant, a tank supplying heating appliances or a storage system in a designated location, the requirement in subparagraph 2 of the first paragraph applies only if petroleum products have not been removed from the tank for more than five years.

194. Before taking a tank out of service, an aboveground tank must be purged of any petroleum products vapour.

195. Despite the second and third paragraphs of section 111, an aboveground tank or piping component may not be reused for storing petroleum products aboveground unless the requirements of section 8.67 of the Construction Code are met.

196. Despite the second and third paragraphs of section 111, any tank removed that is not to be reused or that cannot be reused under the requirements of section 8.67 of the Construction Code must be demolished in accordance with section 8.68 of that Code.

§4. Piping

197. In addition to the provisions of this subdivision, the owner must comply with sections 8.72 to 8.74, 8.80, 8.93, 8.95 to 8.98, 8.100, 8.103, 8.104, the second paragraph of section 8.107, sections 8.108, 8.109, 8.111,

8.113, 8.115, paragraphs 1 to 4 of section 8.116, sections 8.117 to 8.119, 8.121 to 8.125, 8.127 and 8.128 of the Construction Code.

198. Except in the case of piping supplying a marine bulk plant, every petroleum equipment installation erected after 19 May 1984 must meet the requirements of section 8.71 of the Construction Code.

199. Aboveground piping for petroleum products must meet the requirements of section 8.77 of the Construction Code.

200. Any underground portion of piping connected to an underground tank installed after 11 July 1991 on a Class A site referred to in section 166 must have a double wall that meets the requirements of section 8.78 of the Construction Code.

201. Aboveground tanks installed after 11 July 1991 must have safety vent piping that meets the requirements of section 8.102 of the Construction Code.

202. Petroleum product velocity in aboveground piping must not exceed 2.5 m/s, unless the piping is directly connected to a marine wharf.

If the piping is insulated, the insulation must be non-combustible.

203. Aboveground piping for petroleum products must be identified to indicate its contents.

The piping may not be red in colour.

204. Each time a petroleum product is found on aboveground piping or on the ground, or a leak is suspected, the piping must be subjected to a leak detection test in accordance with section 8.110 of the Construction Code.

205. Aboveground piping must be supported and located so as to reduce vibration and stress to a minimum.

The piping must also be protected by barriers in areas subject to vehicle impact.

206. Aboveground indoor piping that is to contain petroleum products must be supported overhead or be located in a trench; it may not be installed under combustible flooring.

The trench referred to in the first paragraph must have trapped drains or positive ventilation to the outdoors preventing the accumulation of flammable vapours.

The aboveground piping must be located close to the ceiling or beams, or along walls, not less than 1.8 m above the floor.

207. No open flame is to be used to heat piping containing petroleum products.

208. An aboveground tank must be filled using vapour-tight connections; that requirement does not apply when filling a fuel oil tank connected to heating equipment.

209. Every fill pipe on a tank for storing motor fuel, except fill pipes on a tank connected to a generator engine using diesel or biodiesel fuel, must extend to a distance of not more than 200 mm from the bottom of the tank.

§5. Replacement and servicing

210. In addition to the provisions in this subdivision, the owner must comply with section 8.47 of the Construction Code.

211. Every high-risk underground steel tank that is not protected against corrosion according to the standard or document mentioned in section 8.42 of the Construction Code as well as steel piping not protected against corrosion that is connected to the tank must be removed from the ground if the tank does not meet the requirements of ULC/ORD Standard C58.10-1992 Jacketed Steel Underground Tanks for Flammable and Combustible Liquids, published by the Underwriters' Laboratories of Canada.

Despite the foregoing, the owner is not required to remove the piping from the ground if a leak detection test complying with the second paragraph of section 8.130 of the Construction Code indicates that the piping is leak-proof and the piping is protected against corrosion according to the requirements of RP0 Standard 169-2002 Control of External Corrosion on Underground or Submerged Metallic Piping Systems or RP0 Standard 285-2002 Corrosion Control of Underground Storage Tank System by Cathodic Protection, published by NACE International.

In addition, the owner is not required to remove a tank installed before 11 July 1991 from the ground immediately if the evaluation of the tank condition, as provided for in Schedule I, falls within any of zones 2 to 4 of the graph in the Schedule. The tank must then be removed not later than the time specified in paragraph 3 of the Schedule.

212. If a petroleum product leaks out of steel underground piping that is not protected against corrosion, and the tank connected to the piping is not required to be removed from the ground according to the requirement of section 211, the entire length of the piping must be removed.

213. The owner must subject the petroleum equipment to a leak detection test in accordance with the second paragraph of section 8.130 of the Construction Code if, for an unknown reason, an event causes a leak or the presence of a petroleum product or petroleum product vapours in the vicinity of the equipment.

If the leak detection test indicates a leak, all defective components in the installation must be repaired or replaced and another leak detection test must be performed.

DIVISION VIII **PROVISIONS APPLICABLE TO MOTOR FUEL** **DISPENSING OUTLETS AND SERVICE CENTRES**

§1. General

214. In addition to the provisions in this subdivision, the owner must comply with sections 8.134, 8.135, 8.136, except with respect to aboveground tanks, the first paragraph of section 8.139, sections 8.140, 8.142, 8.143, 8.145, 8.146, 8.148, 8.151, the first paragraph of section 8.153, sections 8.154 and 8.156 of the Construction Code.

215. Every valve on an aboveground line connected to a tank, every end of a petroleum product line and every fill pipe must be identified in accordance with the document entitled Using the CPPI Colour-Symbol System to Mark Equipment and Vehicles for Product Identification, published by the Canadian Petroleum Products Institute.

216. Petroleum equipment may be used only if two fire extinguishers suitable for extinguishing petroleum product fires are kept on the premises.

The fire extinguishers must be accessible, have an effective total rating equivalent to at least 20-B,C and be maintained in proper working order. One extinguisher must be located less than 10 m from the dispensing areas.

217. The owner must keep oil absorbents on the premises of a motor fuel dispensing outlet or a service centre.

218. A fuelling area used to dispense motor fuel after sunset must be lighted.

219. No vehicle may be fuelled if it is not parked inside a fuelling area.

220. A vehicle may not be fuelled with a Class 1 petroleum product while the engine is running.

That requirement also applies in the case of a vehicle fuelled with a Class 2 petroleum product if the dispenser is located at a distance of less than 8 m measured horizontally from a dispenser for a petroleum product referred to in the first paragraph.

No person may smoke or light a flame within 7.5 m of a dispenser within a servicing area for the fuel supply system of an internal combustion engine, within an area in which Class 1 or Class 2 petroleum products are received or transferred, or inside a booth completely or partially within a dispensing area.

221. Every motor fuel dispenser for a Class 1 or Class 2 petroleum product must meet the requirements of CSA Standard B346-M1980 Power-Operated Dispensing Devices for Flammable Liquids, published by the Canadian Standards Association.

In the case of an aviation fuel dispenser, all components must be suitable for such a product.

222. Every fuelling area must meet the requirements of section 8.144 of the Construction Code; the sizes required in the first paragraph of that section apply only to a fuelling area sited or altered after 26 February 1996.

223. A motor fuel dispenser installed after (*insert the date of coming into force of chapter 10 of the Statutes of 2005*) must satisfy the requirements of section 8.147 of the Construction Code.

Despite section 8.145 of the Construction Code, a motor fuel dispenser installed inside a building before (*insert the date of coming into force of chapter 10 of the Statutes of 2005*) must meet the following conditions:

(1) the dispensing area must have a continuous mechanical ventilation system electrically connected to the dispenser in such manner that the dispenser may only operate while the ventilation is operating at full capacity; and

(2) the dispensing area must be protected by an automatic dry-chemical fire extinguishing system.

224. Every submersible pump in a motor fuel dispensing outlet and every tank situated at a level higher than the base of a motor fuel dispenser must have a fusible safety valve set not higher than 70°C firmly attached to the island.

The shear point of the valve must be situated in the zone extending from 25 mm below the base of the dispenser to 13 mm above the base.

225. If a motor fuel dispenser pump is not installed inside the dispenser, the pump must have a leak detection device.

The operation of the device must be inspected annually according to the method recommended by the manufacturer.

226. Every pit for a submersible pump or the piping of a submersible pump installed in a motor fuel dispensing outlet after 30 April 1999 must be enclosed in a liquid-tight casing resistant to petroleum products.

The casing must be covered, located and serviced in such manner as to prevent external loads being transmitted to the pump, tank or piping.

The pit must be large enough to enable the pump to be inspected and serviced.

227. The owner of a motor fuel dispensing outlet must ensure that the person fuelling a vehicle activates the dispensing nozzle manually.

A dispensing nozzle with a latch-open device may not be used in a self-serve facility, an airport outlet or a marina outlet.

228. Every hose to be used for dispensing a Class 1 or Class 2 petroleum product must meet the requirements of CAN/ULC Standard S612-99 Hose for Flammable and Combustible Liquids, published by Underwriters' Laboratories of Canada, or be of a type used for aviation fuel, at an airport outlet.

§2. Service stations and service centres

229. A Class 1 petroleum product may be transferred inside a service area in a building that has a basement, a pit or other sunken area where flammable vapours may accumulate only if the areas have continuous mechanical ventilation.

230. The owner of a service station or service centre must ensure that no tank truck containing a Class 1 petroleum product or vapours of such product is parked inside a service area unless the vehicle is being serviced.

231. Petroleum equipment may be used in or near a building housing a service station or a service centre if

(1) the hazardous areas listed in Schedule II to Chapter VIII of the Construction Code are separated from any room housing a solid or liquid fuel or gas heating appliance by walls having a fire-resistance rating of at least one hour within the meaning of Chapter I of the Construction Code;

(2) the room containing such a heating appliance does not

(a) have an opening less than 2.5 m from the floor; and

(b) is not used to store a Class 1 or Class 2 petroleum product or as a service area for work on the fuel supply system of internal combustion engines or to dispense, transfer or handle Class 1 petroleum products; the bottom of the combustion chamber of the heating appliance must be at least 500 mm above the floor and the appliance must be protected from impact;

(3) the combustion air necessary for the appliance comes from outside the building;

(4) the return air intake of a forced-air heating appliance is at least 1.25 m from the floor if it is located in a room listed as a hazardous area in Schedule II to Chapter VIII of the Construction Code; and

(5) the burner and the combustion chamber of the equipment are at least 2.5 m from the floor in any area where Class 1 petroleum products are dispensed, transferred or handled.

§3. Self-serve facilities

232. In addition to the provisions of this subdivision, the owner must comply with sections 8.159 to 8.164 of the Construction Code.

233. Every motor fuel dispenser used at a self-serve facility must have a remote on and off control of a console type located inside a building.

The control must be in the off position at all times except when the dispensing nozzle is used for dispensing motor fuel.

234. No sign may indicate to a self-serve facility customer using a motor fuel dispenser after (*insert the date that occurs 180 days after the date of coming into force of this Regulation*) that the customer must reduce the flow after the automatic triggering of the dispensing nozzle.

235. The owner must ensure that

(1) the attendant need not control more than one console;

(2) the attendant has direct access at all times from the work station to the motor fuel dispenser console;

(3) the attendant carrying on duties unrelated to the sale of petroleum products does not move away from the console; and

(4) the provisions of sections 152, 157 to 159, 220 and paragraph 1 of section 8.153 of the Construction Code are complied with.

236. In the event of a spill or a fire, the owner must ensure that the attendant uses the emergency master control to shut off all dispensers until the danger of fire has passed or the fire is under control.

§4. Unattended self-serve facilities

237. In addition to the provisions in this subdivision, the owner must comply with sections 8.165 to 8.168 of the Construction Code.

238. The owner must ensure that motor fuel being dispensed in an unattended self-serve facility is reserved for commercial vehicles and is dispensed only by a customer or the attendant authorized for that purpose in writing by the owner.

When motor fuel is being dispensed, the requirements of sections 152, 157 to 159, 220 and paragraph 1 of section 8.153 of the Construction Code must be met.

239. Two dry-chemical extinguishers each having a rating of 20-B,C and an accessible emergency control able to shut off pump operation must be located at a distance of not more than 18 m from an unattended self-serve motor fuel dispenser.

§5. Marina outlets

240. In addition to the provisions in this subdivision, the owner must comply with sections 8.170, 8.172, 8.175 and 8.177 of the Construction Code.

241. Every petroleum product piping installed on a dock, wharf, pier or pontoon must be protected, where applicable, from impact such as impact from a water craft or seaplane.

242. Every motor fuel dispenser used at a marina outlet must have a safety valve that meets the requirements of section 224.

243. Every tank for storing petroleum products exposed to ground water or to flood conditions must be anchored to prevent displacement.

244. Every aboveground tank for storing motor fuel must be surrounded by a dike or have a diked area or double wall and a fence if the tank is used for commercial purposes.

In addition, the dike, diked area, double wall and fence must meet the requirements of paragraph 1 of section 8.61, paragraphs 1, 2 and 4 of section 8.62 and paragraphs 1 and 2 of section 8.217 of the Construction Code and the requirements of sections 186, 187 and the first paragraph of section 188 of this Chapter.

§6. Airport outlets

245. In addition to the provisions in this subdivision, the owner must comply with paragraphs 4 and 5 of section 8.178, sections 8.179, 8.180, 8.182 to 8.185, 8.187, the first paragraph of section 8.188 and section 8.189 of the Construction Code.

246. Every airport outlet tank for storing aviation fuel installed after 11 July 1991 must meet the following requirements:

(1) have a manhole;

(2) if the tank is fibreglass, all its metallic components must be bonded; and

(3) have at least a 1% slope.

247. The owner must ensure that fuelling and motor fuel controls meet the requirements of CAN/CSA Standard B836-2005 Storage, Handling and Dispensing of Aviation Fuel at Aerodromes, published by the Canadian Standards Association.

248. Every facility for dispensing aviation fuel must have a ground.

249. The owner of high-risk petroleum equipment must visually inspect the piping each month and conduct an annual hydrostatic test at a minimum pressure of one and one half times the normal operating pressure on the piping used for transferring aviation fuel.

250. The requirements of section 8.145 with respect to the distance between a fuel dispenser and dock, wharf, pier or pontoon or approach thereto, sections 8.170, 8.172, 8.175 and 8.177 of the Construction Code and the requirements of section 242 of this Chapter also apply to an airport outlet from which a plane is fuelled on a body of water.

§7. *User outlets*

251. In addition to section 252, the owner must comply with section 8.191 of the Construction Code.

252. If a motor fuel dispenser is left unattended, a control located inside the building or kept outdoors under key must prevent the dispenser from operating.

DIVISION IX PROVISIONS APPLICABLE TO BULK PLANTS

§1. *General*

253. In addition to the provisions in this subdivision, the owner must comply with sections 8.192 to 8.194 of the Construction Code.

254. The owner must post a conspicuous sign at the main gate indicating the owner's name, address and telephone number or that of the owner's authorized agent.

255. The telephone numbers of the police, fire department and ambulance services must be posted by the owner in a conspicuous manner in the main building of a bulk plant.

256. Notices indicating where the emergency controls are located and giving instructions in the handling of the firefighting equipment must be posted by the owner in a conspicuous manner on loading ramps and near emergency controls.

§2. *Loading and unloading installations*

257. In addition to the provisions in this subdivision, the owner must comply with sections 8.195, 8.198 to 8.202 and 8.204 of the Construction Code.

258. No combustible material may be placed at a distance of less than 5 m from a loading or unloading facility or from filling or gauging pipes.

259. Every hose used for dispensing a petroleum product in a container of not more than 225 L designed to be moved must have a dispensing nozzle of non-magnetic material provided with a manual trigger and an automatic shut-off.

The trigger must be kept open manually when in use.

260. Every installation used for loading and unloading must have a ground, an electric conductor and a clip making it possible to ground the cargo tank.

In the case of a key-operated bulk plant, an installation erected after 19 May 1984 must permit the flow of petroleum products only if the grounding has been effected.

261. Every installation used for filling a tank truck or a tank car by bottom loading must meet the requirements of section 8.206 of the Construction Code and the presettable meter of the installation must be used during such loading.

262. The portion of the loading and unloading zones of a bulk plant laid out for the parking of a cargo tank during loading or unloading must,

(1) in the case of Class 1 or Class 2 petroleum products, have a collection system for collecting those products; the system must consist of a concrete apron, an oil separator and a drain connecting the apron and the separator; or

(2) in the case of Class 3 petroleum products or Class 1, Class 2 or Class 3 petroleum products in bulk plants located north of the 53rd parallel and bulk plants located in a designated location, be liquid-tight and laid out in such manner that a spilled product remains confined.

263. Loading and unloading zones built after 19 May 1984 for tank cars must be liquid-tight and laid out in such manner that a spilled product remains confined.

§3. *Pumping*

264. In addition to section 265, the owner must comply with sections 8.209 to 8.216 of the Construction Code.

265. An internal combustion engine may not be used to operate a pump at a bulk plant.

§4. *Fencing*

266. In addition to section 267, the owner must comply with section 8.217 of the Construction Code.

267. The areas around the gate of a bulk plant must be kept free of obstacles.

§5. *Safety of operations*

268. The owner of a bulk plant must ensure that

(1) the receiving tank of the installation is designed to hold the volume intended for it;

(2) the grounding device of the tank is connected to the cargo tank before a petroleum product is transferred into an aboveground tank; and

(3) the ventilation of the tank is satisfactory and that there is no leak in the supply line during the transfer of a petroleum product.

269. A petroleum product must be removed from a bulk plant tank in such manner that internal tank pressure is not increased.

270. The owner of a bulk plant must ensure that no petroleum product is transferred into the cargo tank of a vehicle while its engine is running.

271. The owner of a bulk plant must have in accessible places at least two fire extinguishers in proper working order, each having a capacity equivalent to 20-B,C.

272. If a bulk plant is not under the supervision of the owner during normal operating hours, all loading and unloading valves, water drain valves, fill pipes, pump controls and gates must be locked, except electric remote-control valves.

Outside normal operating hours, shut-off valves in the proximity of aboveground tanks must also be closed and locked.

273. A key-operated installation for loading tank trucks or tank cars supplied by the aboveground tank at a bulk plant must have a remote-control shut-off valve that opens only when the motor of the loading pump is operating.

The valve must be located at the outlet of the tank in such manner as to meet the requirements of section 272 if the bulk plant is not under the continuous supervision of the owner.

274. The owner of high-risk petroleum equipment must provide each attendant at a bulk plant with instructions for operating the bulk plant under normal and emergency conditions.

In the case of a bulk plant that has key-operated dispensing or loading devices, the owner must also provide the instructions to each person having a key.

In addition, the instructions must be posted in the main building of the bulk plant.

275. The owner of high-risk petroleum equipment must inform attendants at each shift change of any tests to be carried out.

A list of the tests must also be posted on the site.

276. A motor fuel tank may fuel the engine of a vehicle inside a bulk plant only if the vehicle is used in the operation of the plant.

277. No product other than a petroleum product or a petroleum product additive may be transferred at a loading ramp for petroleum products.

DIVISION X OFFENCES

278. Every contravention of any of the provisions of this Chapter, except section 128, constitutes an offence.”.

2. This Regulation comes into force on the fifteenth day following the date of its publication in the *Gazette officielle du Québec*.

SCHEDULE I (s. 211)

EVALUATION OF UNPROTECTED STEEL TANK CONDITION

1. The soil aggressiveness value (S.A.V.) is determined according to the method of the Petroleum Association for Conservation of the Canadian Environment.

2. The tank/soil index (T/S) is determined by multiplying the soil aggressiveness value by the age of the tank. $T/S = (S.A.V. \times AGE)$.

3. On the basis of the values obtained, the requirements to be met are as follows (see Graph):

Zone 1

The tank may be protected against corrosion according to RP0 Standard 169-2002 Control of External Corrosion on Underground or Submerged Metallic Piping Systems or RP0 Standard 285-2002 Corrosion Control of Underground Storage Tank System by Cathodic Protection, published by NACE International;

Zone 2

The tank must be replaced before the tank reaches 25 years after its installation;

Zone 3

The tank must be replaced before the tank reaches 25 years after its installation and subject to a leak detection test in accordance with the second paragraph of

section 8.130 of the Construction Code within 12 months as of the year of assessment of its condition and every five years afterward;

Zone 4

The tank must be replaced before obtaining a T/S of 180 or before the tank reaches 25 years after its installation and subject to a leak detection test in accordance with the second paragraph of section 8.130 of the Construction Code every year;

Zone 5

The tank must be replaced immediately.

7876

Draft Regulation

An Act respecting the Health and Welfare Commissioner
(R.S.Q., c. C-32.1.1)

Consultation forum

— Procedure for selecting persons

Notice is hereby given, in accordance with sections 10 and 11 of the Regulations Act (R.S.Q., c. R-18.1), that the Regulation respecting the procedure for selecting persons qualified for appointment to the consultation forum, appearing below, may be made by the Government on the expiry of 45 days following this publication.

The draft Regulation determines the procedure to be followed by the Health and Welfare Commissioner to appoint the 27 members that compose the consultation forum.

In accordance with the Act respecting the Health and Welfare Commissioner (R.S.Q., c. C-32.1.1) the mandate of the forum is to provide the Commissioner with its point of view on the matters or issues the Commissioner submits to it as part of a consultation.

The draft Regulation has no impact on enterprises, including small and medium-sized businesses.

Further information on the draft Regulation may be obtained by contacting David Faucher-Lamontagne, 1005, chemin Sainte-Foy, 6^e étage, Québec (Québec) G1S 4N4; telephone: 418 266-7029; fax: 418 266-7070; e-mail: david.faucher.lamontagne@msss.gouv.qc.ca

Any interested person having comments to make on the draft Regulation is asked to send them in writing before the expiry of the 45-day period to the Minister of Health and Social Services, 1075, chemin Sainte-Foy, 15^e étage, Québec (Québec) G1S 2M1.

PHILIPPE COUILLARD,
Minister of Health and Social Services

Regulation respecting the procedure for selecting persons qualified for appointment to the consultation forum

An Act respecting the Health and Welfare Commissioner
(R.S.Q., c. C-32.1.1, s. 29)

1. In order to select persons qualified for appointment to the consultation forum pursuant to sections 24 to 27 of the Act respecting the Health and Welfare Commissioner (R.S.Q., c. C-32.1.1), the Health and Welfare Commissioner draws up a list of citizens qualified for appointment to the forum for each of the 18 regions of Québec.

The Commissioner also draws up a list of persons for all of Québec with special expertise who are qualified for appointment to the forum.

2. To draw up the list of citizens for each of the 18 regions of Québec, the Commissioner must, in accordance with the Regulation respecting supply contracts, construction contracts and service contracts of government departments and public bodies, made by Order in Council 961-2000 dated 16 August 2000, retain the services of a person, partnership or body that is to be responsible for evaluating the candidacies and proposing to the Commissioner at least 3 candidates for each region. If the number of candidates is insufficient, the person, partnership or body may propose a lesser number of candidates for a region.

Any person who so wishes may request the person, partnership or body chosen pursuant to the first paragraph to examine his or her candidacy. The request must be sent before the date indicated in the selection procedure published pursuant to the third paragraph of section 29 of the Act and be accompanied by the applicant's résumé.

The candidates must have their domicile in the region for which they are proposed and must not be disqualified for a reason set out in section 25 of the Act.

The candidacies proposed for each of the 18 regions of Québec are sent to the Commissioner within 2 months of the date indicated in the published procedure for selecting persons qualified for appointment to the forum.

3. The list of persons with special expertise is drawn up by the Commissioner after the Commissioner makes a request for proposals of not more than 3 candidates to each of the following bodies:

- (1) the Collège des médecins du Québec;
- (2) the Ordre des infirmières et infirmiers du Québec;
- (3) the Ordre professionnel des travailleurs sociaux du Québec;
- (4) the Agence d'évaluation des technologies et des modes d'intervention en santé;
- (5) the Conseil du médicament;
- (6) the universities offering philosophy or ethics programs;
- (7) the associations of institutions whose membership includes one or more institutions that have a research ethics committee or a clinical ethics committee;
- (8) the organizations most representative of sectors of activity related to health or welfare, including the education, economic, environment and labour sectors;
- (9) the universities offering research programs in health;
- (10) the Association québécoise d'établissements de santé et de services sociaux.

A proposal by a body is made by its board of directors or bureau, as the case may be, or, in the case of a university, by the authorities at the head of the university department concerned. The proposal must be sent to the Commissioner within 2 months of the date indicated in the published procedure for selecting persons qualified for appointment to the forum.

The candidates proposed must have special expertise in the body's sector of activity.

4. The Commissioner evaluates the proposals sent pursuant to sections 2 and 3 and draws up the lists as provided in those sections.

5. In addition to the publication under the fourth paragraph of section 29 of the Act, the Health and Welfare Commissioner must also publish, on the Commissioner's Internet site, the procedure for selecting persons qualified for appointment to the consultation forum and the date set by the Commissioner pursuant to that section for making appointments to the forum.

6. This Regulation comes into force on the fifteenth day following the date of its publication in the *Gazette officielle du Québec*.

7878

Draft Regulation

Highway Safety Code
(R.S.Q., c. C-24.2)

Exemptions from the application of Title VIII.1 — Amendments

Notice is hereby given, in accordance with sections 10 and 11 of the Regulations Act (R.S.Q., c. R-18.1), that the Regulation to amend the Regulation respecting exemptions from the application of Title VIII.1 of the Highway Safety Code, appearing below, may be made by the Government on the expiry of 45 days following this publication.

The draft Regulation proposes to replace the total exemptions from the application of Title VIII.1 of the Highway Safety Code that concern hours of driving and service and the pre-departure inspection of certain heavy vehicles by partial exemptions that apply only to the pre-departure inspection. The amendment is made to ensure consistency with the proposed Regulation respecting the hours of driving and rest of heavy vehicle drivers, which contains essentially the same exemptions concerning hours of driving and service.

The draft Regulation also makes various adjustments to reflect amendments to the statutory or regulatory instruments to which it refers.

Further information may be obtained by contacting Linda Thériault, Société de l'assurance automobile du Québec, 333, boulevard Jean-Lesage, C-4-22, C. P. 19600, Québec (Québec) G1K 8J6; telephone: 418 528-4886.

Any interested person having comments to make on the matter is asked to send them in writing before the expiry of the 45-day period to the Minister of Transport and Minister responsible for the Capitale-Nationale region, 700, boulevard René-Lévesque Est, 29^e étage, Québec (Québec) G1R 5H1.

MICHEL DESPRÉS,
*Minister of Transport and
Minister responsible for the
Capitale-Nationale region*

Regulation to amend the Regulation respecting exemptions from the application of Title VIII.1 of the Highway Safety Code*

Highway Safety Code
(R.S.Q., c. C-24.2, s. 621, 1st par., subpar. 42)

1. Section 2 of the Regulation respecting exemptions from the application of Title VIII.1 of the Highway Safety Code is amended

(1) by inserting “the provisions concerning the pre-departure inspection in” after “application of” in the part preceding paragraph 1;

(2) by replacing paragraph 1 by the following:

“(1) a heavy vehicle used when required by an emergency service or in the cases of disaster within the meaning of the Civil Protection Act (R.S.Q., c. S-2.3);”;

(3) by replacing “except where the combination of vehicles is subject to the Transportation of Dangerous Substances Regulation made by Order in Council 674-88 dated 4 May 1988, and requires the display of safety marks in accordance with Division V of that Regulation” in paragraph 4 by “except a combination of vehicles that requires the display of safety marks in accordance with Division IV of the Transportation of Dangerous Substances Regulation made by Order in Council 866-2002 dated 10 July 2002”;

* The Regulation respecting exemptions from the application of Title VIII.1 of the Highway Safety Code, made by Order in Council 622-99 dated 2 June 1999 (1999, *G.O.* 2, 1618) has never been amended.

(4) by replacing paragraph 6 by the following:

“(6) a road vehicle subject to the Transportation of Dangerous Substances Regulation made by Order in Council 866-2002 dated 10 July 2002 that has a net mass of less than 3,000 kg and that does not require the display of safety marks in accordance with Division IV of that Regulation, except minibuses and tow trucks;”.

2. This Regulation comes into force on the fifteenth day following the date of its publication in the *Gazette officielle du Québec*.

Draft Regulation

Highway Safety Code
(R.S.Q., c. C-24.2; 2004, c. 2)

Heavy vehicle drivers — Hours of driving and rest

Notice is hereby given, in accordance with sections 10 and 11 of the Regulations Act (R.S.Q., c. R-18.1), that the Regulation respecting the hours of driving and rest of heavy vehicle drivers, appearing below, may be made by the Government on the expiry of 45 days following this publication.

The draft Regulation proposes new requirements for hours of driving, service and rest that are equivalent to the requirements to apply throughout Canada as of 1 January 2007. It establishes a maximum number of hours of driving, a minimum number of hours of rest per 24-hour period and a limit to the range of a work shift. Other provisions deal with the maintenance and keeping of a daily log in which drivers record the detail of daily duty time.

The draft Regulation proposes to authorize the Société de l'assurance automobile du Québec to issue permits allowing a departure in certain circumstances from the hours of driving and rest standards, and provides for recognition by the Société of equivalent permits issued by other directors.

The draft Regulation sets out standards to be applied by a peace officer when issuing an out-of-service declaration to a driver and determines the conditions that govern the application and duration of the declaration.

The measures proposed in the draft Regulation have no particular impact on the public besides ensuring high safety.

As for enterprises, the impacts are inherent in the implementation of the regulation since they result from the constraints imposed on carriers to ensure compliance with the new requirements applicable throughout Canada. The regulation ensures fair treatment of carriers and makes it possible for Québec enterprises to remain competitive with other Canadian enterprises.

Further information may be obtained by contacting Linda Thériault, Société de l'assurance automobile du Québec, 333, boulevard Jean-Lesage, C-4-22, C. P. 19600, Québec (Québec) G1K 8J6; telephone: 418 528-4886.

Any interested person having comments to make on the matter is asked to send them in writing before the expiry of the 45-day period to the Minister of Transport and Minister responsible for the Capitale-Nationale region, 700, boulevard René-Lévesque Est, 29^e étage, Québec (Québec) G1R 5H1.

MICHEL DESPRÉS,
*Minister of Transport and
Minister responsible for the
Capitale-Nationale region*

Regulation respecting the hours of driving and rest of heavy vehicle drivers

Highway Safety Code
(R.S.Q., c. C-24.2, ss. 519.21.1, 519.21.2, and s. 621, 1st par, subpars. 12, 12.0.1, 12.0.2, 12.1, 12.2, 12.2.1, 12.2.2, 12.4, 39 and 42; 2004, c. 2, s. 42)

CHAPTER I DEFINITIONS AND SCOPE

1. For the purposes of sections 519.8.1, 519.9, 519.10, 519.12, 519.20, 519.21.1 to 519.26, 519.31 to 519.31.3 of the Highway Safety Code and this Regulation,

“cycle” means

(a) cycle 1, under which the hours of service are accumulated over a period of 7 days; and

(b) cycle 2, under which the hours of service are accumulated over a period of 14 days; (*cycle*)

“daily log” means a record containing the information required by sections 29, 31 and 32 and the graph grid in Schedule II; (*fiche journalière*)

“day”, in respect of a driver, means the 24-hour period that begins at the hour designated by the operator and lasts for the duration of the driver's cycle; (*jour*)

“director” means the federal director or a provincial or territorial director; (*directeur*)

“driver” means

(a) a person who operates a heavy vehicle; or

(b) a person employed or otherwise engaged by the operator to operate a heavy vehicle; (*conducteur*)

“home terminal” means the place at which a driver ordinarily reports for work. For the purposes of sections 29 to 31, the definition includes any temporary work site designated by the operator; (*terminus d’attache*)

“hours of driving” means the period of time during which a driver operates a heavy vehicle while the engine is running; (*heures de conduite*)

“hours of rest” means any period of time other than a driver’s hours of service; (*heures de repos*)

“hours of service” means the period of time that begins when a driver commences work including the time during which the driver is required by the operator to be available to work and ends when the driver stops work or is relieved of responsibility by the operator. Hours of service include the hours of driving and the time spent by the driver

(a) inspecting, servicing, repairing, conditioning or starting a heavy vehicle;

(b) travelling in the heavy vehicle as a co-driver, when the time is not spent in the sleeper berth;

(c) participating in the loading or unloading of a heavy vehicle;

(d) inspecting or checking the load of a heavy vehicle;

(e) waiting for a heavy vehicle to be serviced, loaded or unloaded;

(f) waiting for an assignment;

(g) waiting for a heavy vehicle or its load to be inspected;

(h) waiting during an inspection;

(i) waiting at an en-route point because of an accident or other unplanned occurrence or situation; and

(j) performing any work at the request of the operator. (*heures de travail*)

2. For the purposes of this Regulation,

“duty status” means, in respect of a driver, any of the following periods:

(a) hours of rest, other than time spent in a sleeper berth;

(b) hours of rest spent in a sleeper berth;

(c) hours of driving;

(d) hours of service, other than hours of driving; (*activité*)

“establishment” means the place designated by the operator as the place where daily logs, supporting documents and other records required by this Regulation are kept; (*établissement*)

“sleeper berth” means an area of a heavy vehicle that meets the requirements of Schedule I; (*compartiment couchette*)

“work shift” means the time between 2 periods of at least 8 consecutive hours of rest. (*poste de travail*)

3. The provisions applicable to an operator under Chapter II apply to a shipper, a consignee or any other person.

4. Sections 519.9, 519.10, 519.20, 519.21.2, 519.21.3, 519.25 and 519.26 of the Code and this Regulation do not apply to the driver or operator of

(1) a heavy vehicle driven for personal purposes

(a) for a whole day; or

(b) for part of a day, if

i. the vehicle has been unloaded or any trailers have been unhitched,

ii. the distance travelled does not exceed 75 km in a day,

iii. the driver has recorded the odometer reading in the daily log at the beginning and end of the personal use, and

iv. the driver is not the subject of an out-of-service declaration under section 39;

(2) an emergency vehicle;

(3) a heavy vehicle used when required by an emergency service or in the cases of disaster within the meaning of the Civil Protection Act (R.S.Q., c. S-2.3);

(4) special mobile equipment;

(5) a farm tractor or farm machinery within the meaning of the Regulation respecting road vehicle registration made by Order in Council 1420-91 dated 16 October 1991 and a farm trailer within the meaning of the Regulation respecting safety standards for road vehicles made by Order in Council 1483-98 dated 27 November 1998;

(6) a bus or minibus used for urban transport under a contract with a public transport body, an intermunicipal transport commission, an intermunicipal board, a municipality or a group of municipalities;

(7) a combination of road vehicles where the net mass of each vehicle is 3,000 kg or less, provided that the length of the trailer or semi-trailer, including the coupling system, is 10 metres or less, except a combination that requires the display of safety marks in accordance with Division IV of the Transportation of Dangerous Substances Regulation made by Order in Council 866-2002 dated 10 July 2002;

(8) a road vehicle subject to the Transportation of Dangerous Substances Regulation made by Order in Council 866-2002 dated 10 July 2002 that has a net mass of less than 3,000 kg and that does not require the display of safety marks in accordance with Division IV of that Regulation, except minibuses and tow trucks;

(9) a two or three-axle truck being used for

(a) transporting the primary products of a farm, forest or body of water, if the driver or operator of the truck is the producer of the products; or

(b) a return trip after such transport, if the vehicle is empty or is transporting products used in the principal operation of a farm, forest or body of water.

Despite the foregoing, hours of service within the meaning of section 1 performed by a driver at the request of an operator of a vehicle mentioned in any of subparagraphs 2 to 9 of the first paragraph must be counted when a heavy vehicle subject to this Regulation is driven.

CHAPTER II SCHEDULING

DIVISION I CYCLES

5. An operator shall require that a driver follows and the driver shall follow either cycle 1 or cycle 2.

6. Subject to section 8, no operator may request, require or allow a driver who is following cycle 1 to drive and no driver who is following cycle 1 shall drive after the driver has accumulated 70 hours of service during any period of 7 consecutive days.

7. Subject to section 8, no operator shall request, require or allow a driver who is following cycle 2 to drive and no driver who is following cycle 2 shall drive after the driver has accumulated

(1) 120 hours of service during any period of 14 consecutive days; or

(2) 70 hours of service without having taken at least 24 consecutive hours of rest.

8. A driver may end the current cycle, begin a new cycle or switch from one cycle to another if the driver first takes the following hours of rest:

(1) for cycle 1, at least 36 consecutive hours;

(2) for cycle 2, at least 72 consecutive hours.

After taking the hours of rest, the driver begins a new cycle, the accumulated hours are set back to zero and the hours of driving begin to accumulate again.

DIVISION II MAXIMUM NUMBER OF HOURS OF DRIVING AND HOURS OF SERVICE

9. Before driving, a driver must have had at least 8 consecutive hours of rest immediately before beginning a work shift.

No operator shall request, require or allow a driver to drive and no driver shall drive after the driver has accumulated 13 hours of driving or 14 hours of service, or after 16 hours have elapsed since the conclusion of the most recent period of 8 consecutive hours of rest, unless the driver takes at least 8 consecutive hours of rest before driving again.

The period of 8 consecutive hours of rest may not be taken in a stopped heavy vehicle unless they are spent in the sleeper berth.

10. No operator shall request, require or allow a driver to drive and no driver shall drive after the driver has accumulated 13 hours of driving or 14 hours of service in a day.

DIVISION III HOURS OF REST

§1. *General*

11. The time spent by a driver, at the request of the operator by whom the driver is employed or otherwise engaged, as a passenger in a vehicle transporting the driver to the place where the driver will begin to drive is considered part of the hours of rest, if once arrived at the destination the driver takes at least 8 consecutive hours of rest before driving again.

12. Subject to section 8, no operator shall request, require or allow a driver to drive and no driver shall drive unless the driver has taken at least 24 consecutive hours of rest in the preceding 14 days.

§2. *Daily rest*

13. An operator shall ensure that a driver takes and the driver shall take at least 10 hours of rest in a day.

The total amount of rest taken by a driver in a day shall include at least 2 hours of rest that does not form part of a period of 8 consecutive hours of rest required under section 9.

Rest other than the mandatory 8 consecutive hours may be distributed throughout the day in blocks of no less than 30 minutes each.

DIVISION IV SPECIAL PROVISIONS

§1. *Deferral of Daily Rest*

14. Despite sections 10 and 13, a driver may defer a maximum of 2 daily hours of rest to the following day if

(1) the driver is not splitting daily hours of rest in accordance with section 16 or 17;

(2) the hours of rest deferred are not part of the mandatory 8 consecutive hours of rest;

(3) the hours of rest deferred are added to the 8 consecutive daily hours of rest taken in the second day;

(4) the total of the hours of rest taken in the 2 days is at least 20 hours;

(5) the total of the hours of driving in the 2 days does not exceed 26 hours; and

(6) the driver indicates in the “Remarks” section of the daily log that the driver is deferring hours of rest under this section and whether the driver is driving under day one or day two of the deferral period.

§2. *Ferries*

15. Despite sections 9 and 13, a driver travelling by a ferry crossing scheduled to take more than 5 hours is not required to take the mandatory 8 consecutive hours of rest if

(1) the time spent resting in a sleeper berth while waiting to board the ferry, in a cabin on the ferry and at a place that is no more than 25 km from the point of disembarkation from the ferry combine to total a minimum of 8 hours;

(2) the hours are recorded in the daily log as hours of rest spent in a sleeper berth; and

(3) the driver retains the receipt for the crossing and accommodation fees.

§3. *Splitting of Daily Rest*

16. A driver who is driving a heavy vehicle fitted with a sleeper berth may meet the mandatory hours of rest and daily hours of rest requirements of sections 9 and 13 by accumulating hours of rest in no more than 2 periods if

(1) neither period of rest is shorter than 2 hours;

(2) the total of the 2 periods of rest is at least 10 hours;

(3) the rest is spent resting in the sleeper berth;

(4) the total of the hours of driving in the periods immediately before and after each of the periods of rest does not exceed 13 hours;

(5) no hours of driving are worked after the driver has accumulated 14 hours of service in the periods immediately before and after each period of rest;

(6) the elapsed time in the periods immediately before and after each of the periods of rest does not include any driving time after the 16th hour after the driver comes on-duty; and

- (7) none of the daily rest is deferred to the next day.

No operator shall request, require or allow a driver to begin to drive again and no driver shall begin to drive again in accordance with the requirements of sections 9 and 13 without first taking at least 8 consecutive hours of rest.

17. A team of drivers driving a heavy vehicle fitted with a sleeper berth may meet the mandatory hours of rest and daily hours of rest requirements of sections 9 and 13 by accumulating hours of rest in no more than 2 periods if

- (1) neither period of rest is shorter than 4 hours;
- (2) the total of the 2 periods of rest is at least 8 hours; and
- (3) the rules prescribed by subparagraphs 3 to 7 of the first paragraph of section 16 are complied with.

No operator shall request, require or allow a driver to begin to drive again and no driver shall begin to drive again in accordance with the requirements of sections 9 and 13 without first taking at least 8 consecutive hours of rest.

§4. Towing

18. The driver of a tow truck may exceed the hours of driving and hours of service and reduce the hours of rest prescribed by this Chapter if the driver has to complete the towing of a vehicle stopped on a public road and return to the home terminal if

- (1) the driver may reach the location of the breakdown or accident under normal road conditions in accordance with the prescribed hours; and
- (2) the driver does not travel more than 160 km from the towing location to the home terminal.

§5. Snow removal

19. Despite sections 9, 10 and 13, where public safety requires that snow be removed from a public road or that ice melter or abrasives be spread on a public road, in accordance with the requirements established by municipalities or the Ministère des Transports, a driver may drive up to 15 hours per work shift in accordance with either of the following options:

- (1) during a maximum of 2 consecutive work shifts, the driver subtracts the hours of rest required under the second paragraph of section 13 and adds them to the 8 consecutive hours of rest taken at the end of the first, second or third work shift if

(a) no driving time is done if the driver has accumulated 16 hours of service or 16 hours have elapsed since the conclusion of the most recent period of 8 consecutive hours of rest;

(b) at least 8 consecutive hours of rest were taken immediately before beginning the first work shift;

(c) the driver does not split the daily hours of rest in accordance with section 16 or 17;

(d) the total duration of the daily hours of rest taken in the 3-day period during which the 3 work shifts are performed is at least 30 hours;

(e) the total duration of the hours of driving during those 3 work shifts does not exceed 39 hours; and

(f) the driver indicates in the “Remarks” section of the daily log that the driver is subtracting hours of rest under this section, the option used to remove the time and whether it is the first, second or third work shift; or

(2) during a single work shift, the driver removes 2 of the 8 consecutive hours of rest taken at the end of the work shift and the hours of rest required under the second paragraph of section 13, and adds that time to the 8 consecutive hours of rest taken at the end of the second work shift in accordance with the conditions prescribed in clauses *a* to *f* of subparagraph 1.

A driver who has chosen an option may not choose the other option before the end of the third work shift.

§6. Emergencies

20. The requirements of this Regulation in respect of hours of driving, service and rest do not apply to a driver who, in an emergency, requires more hours of driving to reach a destination that provides safety for the occupants of the heavy vehicle and for other users of the road or the security of the heavy vehicle and its load.

§7. Adverse driving conditions

21. A driver who encounters adverse driving conditions during a trip may extend the hours of driving and service permitted under sections 9 and 10 and the hours of service permitted under sections 6 and 7 by no more than 2 hours to complete the trip if

(1) the driver still takes the required 8 consecutive hours of rest;

(2) the driver removes all or part of the 2 daily hours of rest required under the second paragraph of section 13 that have not been taken; and

(3) the trip could have been completed under normal driving conditions without the removal.

Adverse driving conditions are adverse road or weather conditions that were not known to the driver or operator before the driver began driving or could not reasonably have been known to them.

CHAPTER III PERMIT TO DEPART FROM HOURS OF DRIVING AND REST

22. The Société may issue a permit to an operator authorizing the operator to depart from hours of driving and rest prescribed by this Regulation if

- (1) the safety and health of the public so require;
- (2) the vehicle covered by the permit travels in Québec only; and
- (3) the operator took the means necessary to ascertain that the service could not be provided in accordance with this Regulation.

23. The Société may also issue a permit to an operator authorizing the operator to depart from hours of driving and rest by reducing the daily hours of rest required under the second paragraph of section 13 by no more than 2 hours and by increasing the hours of driving by no more than 2 hours if

- (1) the safety and health of the public, the driver or the employees of the operator are not or are unlikely to be jeopardized; and
- (2) the reduction in the hours of rest or increase in the hours of driving and service is required
 - (a) to allow a driver following a regular itinerary to reach the home terminal or destination;
 - (b) to allow the delivery of perishable goods; or
 - (c) to accommodate a significant temporary increase in the transportation of passengers or goods by the operator.

24. To be issued a permit referred to in section 22 or 23, an operator must apply to the Société and provide it with the following documents and information:

- (1) the name and address of the operator;
- (2) the names of the drivers concerned, their driver's licence numbers and the provinces or territories of issuance;

(3) a description of the heavy vehicles covered by the permit applied for;

(4) a list of all accidents involving the operator or any driver that occurred during the 6 months before the date of the application if they are required by the laws of the province, territory or state in which the accident occurred to be reported to the police;

(5) the requested duration of the permit;

(6) the requested schedule;

(7) the reasons for the application, with supporting evidence;

(8) in the case of an extra-provincial truck undertaking, a detailed description of the load and the Canadian provinces and territories in respect of which the permit is to apply;

(9) in the case of an extra-provincial bus undertaking, a detailed description of the routes in respect of which the permit is to apply;

(10) a copy of any permit or licence that departs from this Regulation and that was issued in the previous 5 years to the operator by the Société or a federal, provincial or territorial director;

(11) a signed declaration that discloses any other application for a permit made by the operator to a director within the 6 months before the date of the application; and

(12) any other information required by the Société to evaluate whether the granting of a permit would or would be likely to jeopardize the safety or health of the public, the driver or the employees of the operator.

If requested by the Société to do so, the operator shall make available to the Société the daily logs, supporting documents or records of hours of service, for the 6 months before the application, of the drivers covered by the permit.

25. Before issuing a permit, the Société shall obtain the written approval of the provincial or territorial directors of the provinces or territories in which the heavy vehicle will be driven under the permit.

26. The permit must specify the reasons for issuing it, its duration, which shall not exceed one year, and any terms or conditions required for the protection of the safety or health of the public, the driver or the employees of the operator.

27. An operator to whom a permit is issued shall

(1) keep a copy of the permit in each heavy vehicle in respect of which it applies;

(2) when the Société so requests, provide the particulars concerning the heavy vehicles in respect of which the permit applies and keep the Société informed of any changes so that it may accurately and quickly identify the vehicles;

(3) make available for inspection by the Société, immediately on request, the daily log and the supporting documents of the drivers of the heavy vehicles in respect of which the permit applies or the records of hours of service of the drivers; and

(4) notify the Société without delay of any accident involving any of the heavy vehicles to which the permit applies if it is required by the laws of the province, territory or state in which the accident occurred to be reported to the police.

28. When it is required to approve the issue of a permit to a director to whom an application for a permit is made in respect of a heavy vehicle that will travel in Québec, the Société shall

(1) respond to the request for approval within 30 days after receiving it; and

(2) give its approval if it has no reason to believe that the safety or health of the public, the driver or the employees of the operator would be or would be likely to be jeopardized by the granting of the permit.

CHAPTER IV
DAILY LOGS**29.** An operator shall require every driver to fill out and every driver shall fill out a daily log each day that accounts for all of the driver's duty status for that day.

Time must be recorded using the local time at the driver's home terminal.

30. Despite section 29, a driver is not required to fill out a daily log if

(1) the driver operates a vehicle that is not covered by a permit issued under Chapter III;

(2) the driver operates or is instructed by the operator to operate a heavy vehicle within a radius of 160 km of the home terminal;

(3) the driver returns to the home terminal each day to begin a minimum of 8 consecutive hours of rest; and

(4) the operator meets either of the following conditions:

(a) the operator maintains registers showing, for each day, the driver's duty status and cycle followed, the hour at which each duty status begins and ends and the total number of hours spent in each status and, if applicable, the reasons for any excess hours or deferral of hours of rest in accordance with this Regulation; or

(b) the operator maintains registers showing the date and time when the day begins if different than midnight, the cycle followed by the driver, the hour at which the driver's work shift begins and ends and the total number of service during the day provided that

i. the work shift begins and ends during the same day,

ii. the duration of the work shift is 13 hours or less, and

iii. the duration of the period of rest before and after the work shift is at least 11 consecutive hours.

31. At the beginning of each day, an operator shall require that a driver enters and the driver shall enter the following information in the daily log:

(1) the date;

(2) the driver's name and, if the driver is a member of a team of drivers, the names of the co-drivers;

(3) the time when the day begins if different than midnight;

(4) the cycle followed by the driver;

(5) the number of the registration plate of the heavy vehicle or the unit number entered on the registration certificate;

(6) the odometer reading of each of the heavy vehicles operated by the driver;

(7) the names and the addresses of the home terminal and the establishment of every operator by whom the driver was employed or otherwise engaged during that day;

(8) in the “Remarks” section of the daily log, if the driver was not required to keep a daily log immediately before the beginning of the day, the number of hours of rest and hours of service that were accumulated by the driver during each day without that requirement during the 14 days before the beginning of the day; and

(9) if applicable, in the “Remarks” section of the daily log, the reasons for any excess hours or deferral of hours of rest in accordance with this Regulation.

32. In addition to the information prescribed by section 31, the operator shall require that the driver records and the driver shall record in the daily log

(1) the hours in each duty status during the day, in accordance with Schedule II, and the location of the driver each time his or her duty status changes, as that information becomes known and, in the “Remarks” section of the daily log, the reasons for any excess hours; and

(2) at the end of each day, the total hours for each duty status and the total distance driven by the driver that day, excluding the distance driven in respect of the driver’s personal use of the vehicle within the meaning of subparagraph 1 of the first paragraph of section 4, as well as the odometer reading at the end of the day and the driver’s signature on the daily log attesting to the accuracy of the information recorded in it.

33. A driver may use an electronic recording device for recording duty status if

(1) the information contained in the electronic recording device is the same as the information that would have been provided if it had been submitted as a daily log in paper format;

(2) the device is capable of displaying

(a) the hours of driving and other hours of service for each day on which the device is used;

(b) the total hours of service remaining and the total hours of service accumulated in the cycle being followed by the driver; and

(c) the sequential changes in duty status and the time at which each change occurred for each day on which the device is used;

(3) when requested to do so by a peace officer or an inspector, the driver can immediately provide the information for the previous 14 days by producing it on a digital display screen of the electronic recording device or in handwritten form or on a print-out or any other intelligible output, or any combination of these;

(4) the driver is capable, if so requested by a peace officer or an inspector, of preparing a handwritten daily log from the information stored in the device for each day on which the device is used;

(5) the operator provides blank daily log forms in the heavy vehicle for the driver’s use;

(6) the device automatically records when it is disconnected and reconnected and keeps a record of the time and date of these occurrences;

(7) the device records the time spent in each duty status of the driver; and

(8) any daily log in paper format that is generated from the information that is stored in the device is signed on each page by the driver attesting to its accuracy.

An electronic recording device is an electric, electronic or telematic device that is capable of accurately recording each period of duty status, in whole or in part.

34. No driver who is required to fill out a daily log shall drive and no operator shall request, require or allow the driver to drive unless the driver has in his or her possession

(1) a copy of the daily logs for the preceding 14 days;

(2) the daily log for the current day, completed up to the time at which the last change in the driver’s duty status occurred; and

(3) any supporting documents that the driver received in the course of the current trip.

35. A driver shall, within 20 days after completing a daily log, forward the original daily log and supporting documents to the home terminal and the operator shall ensure that the driver does so.

A driver who is employed or otherwise engaged by more than one operator in any day shall forward, within 20 days after completing a daily log, and the operators shall ensure that the driver forwards

(1) the original of the daily log to the home terminal of the first operator for which the driver worked and a copy of it to the home terminal of each other operator for which the driver worked; and

(2) the original supporting documents to the home terminal of the operator concerned.

36. The operator shall keep the daily logs and supporting documents at its establishment and deposit them there within 30 days after receiving them.

37. An operator who hires a driver shall, at the time the driver begins work, obtain the daily logs or information required under paragraph 4 of section 30 for the 14 days prior to the current day from the person providing the service and is required to provide them.

38. A person who provides the services of a driver shall, at the time the driver begins work with an operator, provide the operator with the daily logs or information required under paragraph 4 of section 30 for the 14 days prior to the current day.

CHAPTER V OUT-OF-SERVICE DECLARATIONS

39. A peace officer may issue an out-of-service declaration in respect of a driver if

(1) the driver contravenes paragraph 1 of section 519.8.1 of the Highway Safety Code;

(2) the driver fails to comply with any of the hours of driving or hours of rest requirements of Chapter II or the requirements of the permit issued under Chapter III;

(3) the driver is unable or refuses to produce to a peace officer or an inspector the daily logs, supporting documents or any other register that the driver must possess under section 34;

(4) there is evidence that shows that the driver has completed more than one daily log, has entered inaccurate information in the daily log or has falsified information in the daily log; or

(5) the driver has mutilated or defaced a daily log or a supporting document in such a way that the peace officer cannot determine whether the driver has complied with the hours or driving and hours of rest requirements of Chapter II or the requirements of a permit issued under Chapter III.

40. The peace officer shall notify the driver and the operator in writing of the reason that the driver has been made the subject of an out-of-service declaration and the period during which it applies.

An out-of-service declaration applies

(1) for 10 consecutive hours, if the driver contravenes paragraph 1 of section 519.8.1 of the Code;

(2) for 10 consecutive hours, if the driver contravenes section 10;

(3) for the number of hours needed to correct the failure, if the driver fails to comply with any of the hours of rest requirements of Chapter II or the requirements of a permit issued under Chapter III; and

(4) for 72 consecutive hours, if the driver contravenes any of paragraphs 3 to 5 of section 39 or beyond the 72 hours until the driver rectifies the daily log, if applicable, and provides it to the peace officer so that the peace officer is able to determine whether the driver has complied with this Regulation.

CHAPTER VI DRIVER'S RECORD

41. The operator or the person who offers the services of a driver shall record and keep the following information and documents:

(1) a copy of the driver's licence of the driver;

(2) the declaration referred to in section 519.7 of the Code, signed by the driver, whereby the latter informs the operator that the driver's licence has been suspended, modified or cancelled;

(3) the driver's hiring date;

(4) a copy of the service contract between the person offering the services of a driver and the operator;

(5) the daily logs and the documents referred to in paragraph 4 of section 30; and

(6) a copy of the permit issued under Chapter III.

The operator shall also keep the supporting documents in the record.

Despite the foregoing, if the driver's services are leased by the operator, the operator shall record and keep the documents referred to in subparagraphs 4 and 5 of the first paragraph and the supporting documents only for that driver.

42. The operator and the person providing the services of a driver shall keep the information and documents referred to in subparagraphs 1 to 4 of the first paragraph of section 41 for at least 12 months from either of the following dates:

(1) the date the driver's contract ended, with respect to subparagraphs 1, 3 and 4; or

(2) the date on which the suspension, modification or cancellation of the driver's licence ends, with respect to subparagraph 2.

The daily logs and information referred to in subparagraph 5 of the first paragraph of section 41 and supporting documents must be kept in chronological order for each driver for a period of at least 6 months.

The copy of the permit issued under Chapter III must be kept for a period of at least 6 months after its expiry date.

CHAPTER VII FINAL

43. This Regulation replaces the Regulation respecting hours of driving, hours of work and the heavy vehicle driver's record, made by Order in Council 389-89 dated 15 March 1989.

44. This Regulation comes into force on the fifteenth day following the date of its publication in the *Gazette officielle du Québec*.

SCHEDULE I (s. 2)

SLEEPER BERTHS

An area of a heavy vehicle is a sleeper berth if

(1) it is designed to be used as sleeping accommodation;

(2) it is located in the cab compartment or immediately adjacent to the cab compartment and is securely fixed to it;

(3) it is not located in or on a semi-trailer or a full trailer;

(4) if it is located in the cargo space, it is securely compartmentalized from the remainder of the cargo space;

(5) in the case of a bus,

(a) it is located in the passenger compartment;

(b) it is equipped with a berth at least 1.9 m in length, 60 cm in width and 60 cm in height;

(c) it is separated from the passenger area by a solid physical barrier that is equipped with a door that can be locked;

(d) it provides privacy for the occupant; and

(e) it is equipped with a means to significantly limit the amount of light entering the area;

(6) in the case of a heavy vehicle other than a bus, it is rectangular in shape with at least the following dimensions:

(a) 1.9 m in length, measured on the centre line of the longitudinal axis;

(b) 60 cm in width, measured on the centre line of the transverse axis; and

(c) 60 cm in height, measured from the sleeping mattress to the highest point of the area;

(7) it is constructed so that there are no impediments to ready entrance to or exit from the area;

(8) there is a direct and readily accessible means of passing from it into the driver's seat or compartment;

(9) it is protected against leaks and overheating from the vehicle's exhaust system;

(10) it is equipped to provide adequate heating, cooling and ventilation;

(11) it is reasonably sealed against dust and rain;

(12) it is equipped with a mattress that is at least 10 cm thick and adequate sheets and blankets or a sleeping bag; and

(13) when the driver is a member of a team of drivers, it is equipped with a means of preventing ejection of the occupant during deceleration of the heavy vehicle, the means being designed, installed and maintained to withstand a total force of 2,700 kg applied toward the front of the vehicle and parallel to the longitudinal axis of the vehicle.

SCHEDULE II

(ss. 1 and 32)

DUTY STATUS	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	Total hours
